Attachment technology
Cargo lashing
Lifting technology

PFEIFER

Dear Customer,

Do you attach importance to continuous improvement and are constantly looking for optimisation potential in your processes? In the course of this you also check whether your lifting and transport processes can be made safer, more flexible and more economical?

You prefer to work with a partner who is also there for you beyond the delivery? Then contact us, because that is precisely our claim and drive. Our comprehensive knowledge is based on decades of experience in rope and lifting technology. Through the intensive analysis of processes, we know when and where we can provide support in an advisory capacity. Your satisfaction is always our goal.

We are at your disposal from planning and construction through in-house handling to delivery and maintenance – as your partner on an equal footing.

Our mobile service takes over the testing responsibility for you and guarantees maximum safety. You can also benefit from our know-how and attend our specialist seminars.

As a family-run company with a long tradition, we have been planning and acting long-term and sustainable for generations – also in our customer relations. Whether personal advice for standard applications or extreme individual challenges – we offer you planning security, quality, flexibility and economical solutions, even for the most demanding applications.

In addition to competence, proximity and reliability, we focus on the continuous further development of our product range. Discover in this catalogue, in addition to the proven products, the latest innovations, further developments and improvements.

Only those who move with the times and plan today for tomorrow will be successful in the long run. With this in mind, let us discover new paths together.

We look forward to you!

A handwritten signature in blue ink, appearing to read "Alexander Zanocco".

Alexander Zanocco, Managing Director

Selected products. Intelligent solutions.

Our product range is hand-picked. Selected by specialists who have a background in the field and know your industry. We know what is important in practice and do everything we can to offer you the optimal solution for every task.

400 years of experience

PFEIFER has been dealing with the securing, lifting and moving of loads for 12 generations. With this knowledge, we select a proven and contemporary product range for you every year.

100% quality

We keep our promises. That's why we only offer products that we have thoroughly tested ourselves. Our quality controls include the incoming inspection of the material, the manufacturing process and the testing of the manufactured products. Our group-wide QA management system is certified to both DIN EN ISO 9001 and BS OHSAS 18001.

19 countries

PFEIFER is located at 33 locations in 19 countries. We monitor developments in other regions, examine new ideas and procure worldwide. To always offer you the best and most economical solution.

More service. More partnership.

Own manufacturing and fabrication

Do you have any special requests? We realise individual customer wishes at short notice! In our own sewing and production departments.

Fast response, short delivery times

Whether for advice, delivery or service: Speed and flexibility are important to us. For this purpose, we afford extensive stock keeping.

Own test centre

Does a product really meet your specific requirements? We carry out feasibility checks for you, e.g. load capacity tests.

Individual ordering options

We adapt ourselves to your wishes. From personal contact to fully electronic data exchange.

Welcome to the PFEIFER Complett-catalogue 2021

Everything you need for safe slinging, lashing, lifting, turning and moving. In proven PFEIFER quality. With the best PFEIFER services.

Modular spreader beam

system

**The ideal combination
for every requirement**

Two versions and six options make everyday life and load transport easier and at the same time meet a wide variety of requirements. Greater working load limit, longer working length, more load changes – the right solution for every load!

Page
544

HIT Fibre Tech chain sling/ lashing chain

The lightweight one

The textile chain sling or lashing chain is eight times lighter than a comparable steel chain, protects the components and is resistant to environmental influences such as salt, chemicals, etc.

Page
296

Allround Megaloop

The high-performance round sling

The super-light round sling made of high-strength Dyneema® has a rope-like compact cross-section. As a result, it achieves direct working load limits of up to 20,000 kg with low dead weight and high flexibility. Load attachment could hardly be more convenient!

Page
272

Page
416

HIT hydraulic jack

Perfect for maintenance and assembly work

The lightweight and compact hydraulic jack with extended claw and 5 t lifting capacity is also suitable for frequent and demanding applications such as vehicle construction.

Updraft® Custom Sling

For optimal use of the crane load capacity

The custom-made rope sling achieves the characteristics of a steel wire rope sling – at one seventh of the weight and with minimised risk of injury.

PFEIFER Group: Companies that move things.

Lift, secure, connect, move: PFEIFER has been dealing with these topics for over 400 years. Today, PFEIFER has three divisions with a total of ten business units. Each a leader in their field, all united by a common attitude. Whether you get to know us as a manufacturer, assembler, seller or project manager:

We are your partner:

**Professional. Thorough.
Innovative.**

Ropes & Services

As an innovative system provider, PFEIFER Ropes & Services combines over 200 years of experience in rope production, rope application technology and comprehensive services worldwide. As an original equipment manufacturer and supply chain partner of the world's largest construction machinery and elevator manufacturers, we supply well-known customers with products and services in the rope sector. With our application knowledge of the rope and its requirements in different areas of application, we offer safe standard and highly specific individual solutions for construction machinery and elevators, industrial plants and the maritime industry. We also support you through our worldwide network of rope experts in consulting, technical implementation and all repair and maintenance measures.

Business units:
Industrial Ropes, Elevator Products

Structures

PFEIFER Structures is the world's leading partner for innovative lightweight structures such as building envelopes, façades, roofs and much more. As pioneers of lightweight architecture, we advise, deliver and install sophisticated projects in any material from steel and wood to membranes, glass or other materials.

Business units:
Lightweight Architecture, Cover Structures

Lifting

PFEIFER offers standard and sophisticated special solutions worldwide for the efficient and safe movement and connection of precast concrete elements, loads and goods of all kinds. As a partner, we support you with individual project concepts, excellent testing services and practical specialist seminars. As an expert in protective systems made of high-strength wire and rope nets, we also develop customer-specific protective nets and barriers for the prevention of natural hazards and other safety risks. In addition, PFEIFER has for many years been your reliable, international partner for high-quality tension member systems for architecture and construction projects of all kinds.

Business units:
Building Systems, Attachment and Lashing Equipment, Lifting Technology, Mobile Services, Protective Structures, Tension Members

Discover our digital side!

We are always glad to be there for you personally, for example by phone or a consultation appointment with you on site. But we are just as happy to simply accompany you digitally in all decision-making and procurement processes. With online information offers and the appropriate electronic interfaces for future-proof, fast and error-free processing.

The choice is yours!

We also accompany you digitally throughout the entire process:

From online consulting to e-procurement!

Want to know more? Speak to your local technical adviser or get in touch with us.

Contact: e-procurement@pfeifer.de, +49 (0) 83 31-937-394

PFEIFER Mobile Services.

Back you up.

Employers are responsible for safety at the workplace – and for ensuring that all legal requirements for the safe use, storage, testing and discarding time of work equipment are complied with. We relieve you of this responsibility.

With tailor-made inspection services.

Our Inspection Service

Reminder of inspection dates

When purchasing, you decide whether we should remind you in good time of the regular inspection date.

Execution of the inspection

Our experienced employees carry out the legally required inspections using state-of-the-art machines. Mobile on-site at your premises or at one of our numerous service centres.

Instant repairs

We repair most defects immediately using spare parts that we bring with us. In the case of extensive repair work you will receive an estimate.

Spare parts service

For many products, we offer online spare parts lists that show at a glance what each part is called.

www.pfeifer.info/spare-parts

Documentation of examination reporting and record-keeping

The product's examination reporting and record-keeping is visible to you and all service technicians across Europe.

Work equipment marking

For quick inspection and optimal documentation, we mark your products with numbers and colour markings – matching the technical specifications and the product.

Mobile at your premises, too!

Onsite for you: In the case of larger inspection actions, our mobile Inspection Service comes to your company so that your products are available to you for use again immediately.

Frequency Identification (RFID) marking

Transponders (tags) on the work equipment transmit the data of your work equipment without contact as soon as the test device is within range.

Well equipped

For example on the left: mobile tensile test bench up to 10 t. Right: stationary tensile test bench up to 600 t in our test centres.

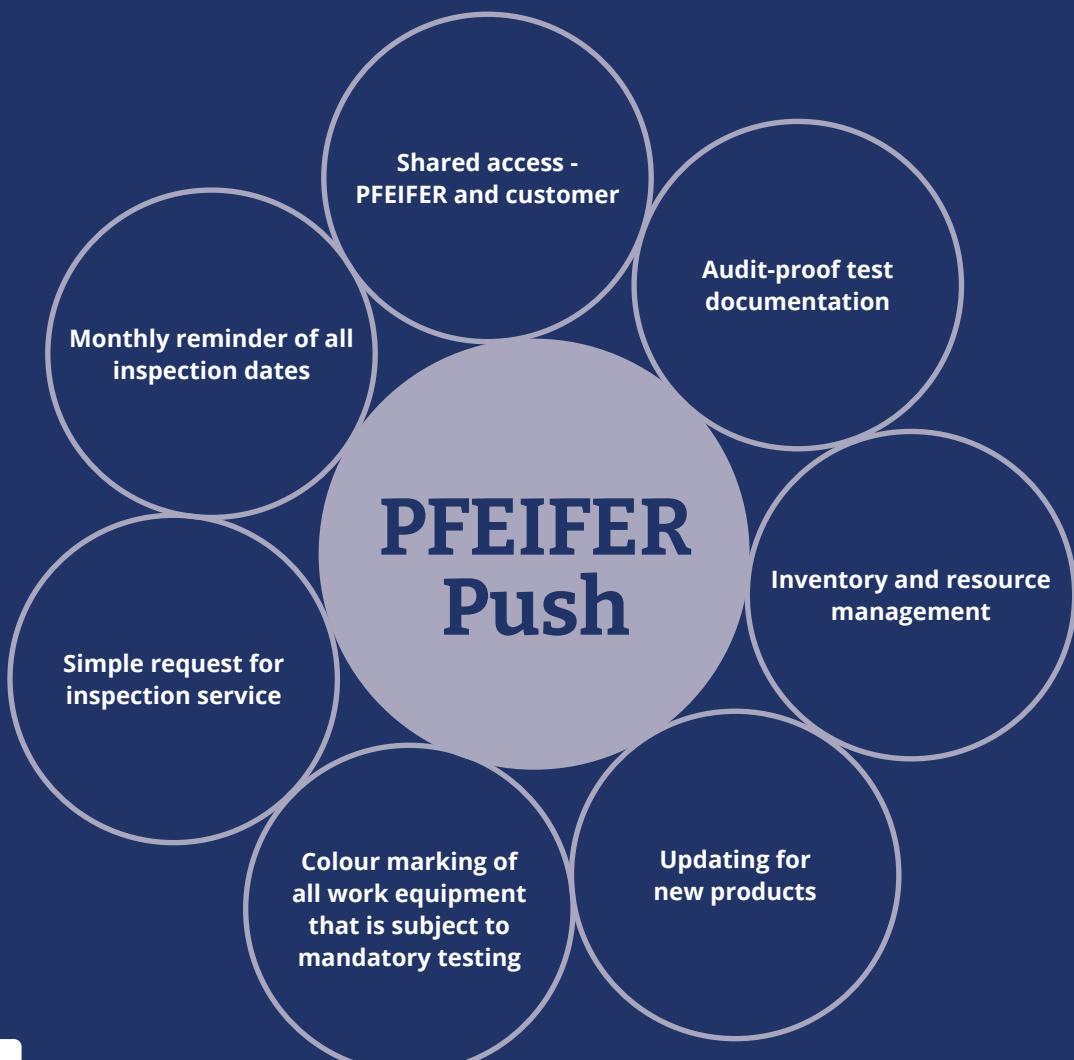

Get informed!

www.pfeifer.info/mobile-services

Who has their eye on every shackle and every lashing strap? You! With PFEIFER PUSH.

With the PFEIFER PUSH web-based work equipment management system, you have an overview of all work equipment subject to mandatory inspection, inspection due dates, the associated inspection records and lists at anytime and anywhere. This gives you security and

saves time during audits. As a customer, you can also conveniently maintain your inventory there. All data can be exported, printed or archived. You can either import new products or specify when ordering that they are to be adopted into the system.

**Play it safe now!
We'll be glad to prepare an individual quotation!**

PFEIFER Academy.

Because safety starts with the user.

Load lifting attachments and attachment devices, manually operated winches, lifting and pulling devices, ropes and lifting anchor systems as well as personal fall protection equipment require careful and expert handling. Trained employees increase safety in the company, avoid accidents and lower costs.

Simply successful

For more than 30 years we have been training more than 1,000 participants annually in up-to-date specialist seminars. In addition to the latest standards, our experienced speakers convey the necessary basic knowledge to your employees – always with reference to practical application. The contents are comprehensively prepared; all participants receive a certificate as documentation.

Virtual or on-site

We'll be glad to conduct our seminars on site at your premises and adapt the contents individually. Many of the seminars can also take place online. **Just contact us!**

We'll be glad to advise you!

fachseminar@pfeifer.de
Phone +49 (0) 83 31-937-112

Experience counts

Our many years of experience in the manufacture, assembly, selection, testing and repair of ropes, attachment devices and more is also reflected in the quality of our seminars. The trainers can draw on grown knowledge and are happy to pass it on.

Our seminar offer

Technical seminar for training to become a qualified person (expert) for attachment devices – **online too on request!**

Technical seminar for training to become a qualified person (expert) for load lifting attachments – **online too on request!**

Refresher seminar for qualified persons (experts) on load lifting attachments and attachment devices – **online too on request!**

Technical seminar on cargo lashing and securing

Technical seminar on load securing with proof of training

Basic technical seminar on the principles of load securing

Technical seminar for training to become a qualified person (expert) for the inspection of ropes

Basic technical seminar on the principles of rope inspection

Technical seminar for training to become a qualified person (expert) for manually operated winches, lifting and pulling devices

Technical seminar on the principles for qualified persons (expert) for lifting anchor systems – **online too on request!**

Technical seminar on the safe use of lifting anchor systems – **online too on request!**

Basic instruction on the use of personal fall protection equipment

Refresher instruction on the use of personal fall protection equipment

Technical seminar on attachment points for technical designers – **a online too on request!**

* All seminars are conducted exclusively in German.

Together we move mountains

From attachment points to lashing straps; standard to custom solutions: We do everything we can to deliver you the perfect solution for your lifting and handling needs. As good, simple and fast as possible. Just contact us!

Attachment devices and attachment points

Lifting points	18
Chain slings	69
Textile attachment devices	253
Edge and abrasion protection systems	309
Wire rope slings	325
Shackle	356
Turnbuckles	378
DIN chains	381

Attachment points

Attachment points from PFEIFER enable the secure attachment or lashing of a load and are mounted directly on it. Their purpose is the attachment of attachment devices or load lifting attachments. The requirement of the Machinery Directive for the equipment of the load with suitable fastening devices are thus met.

Selection matrix: Which attachment point is the right one for my application?

All attachment points comply with the EN 1677-1 standard and the Machinery Directive 2006/42/EC. In addition, the following questions will help you with orientation:

Question:

For which purpose is the attachment point to be used?

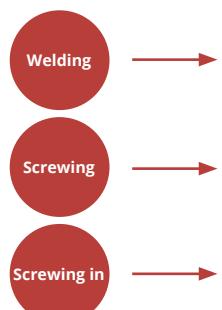

Page 472

Question:

How should the attachment points be attached?

Weld-on hook/eye

- Fixed mounting on the load
- No unscrewing of the attachment point in the load direction when loaded.
- Inexpensive alternative to bolt-on attachment points

Page 68

Bolt-on attachment eye

- Fastening via external bolts

Page 66

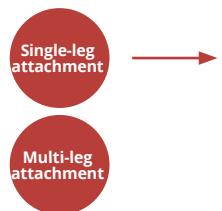

Screw-in attachment points

- Screwing in via the existing thread
- Flexible alternating operation

Question:

Which is the type of rigging in use?

Rigid attachment points

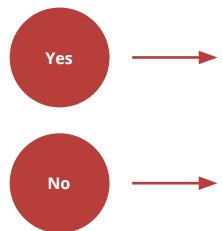

- No alignment of the fixed attachment points after assembly
- Use only when load is guaranteed in the prescribed pulling direction
- As a rule, only single-leg attachment

Page 58

Question:

Should the attachment point be self-aligning under load?

Attachment points rotatable under load

- Avoidance of incorrect loading through automatic alignment of the attachment point in the load direction under load by a ball bearing or roller bearing
- 360° rotatable and 180° tiltable depending on the model, thus ideally suited for rotating and turning procedures
- Ideal for multi-leg attachment

Page 24

Rotating attachment points

- Avoidance of incorrect loading through alignment in the load direction in the unloaded state after assembly
- Suitable for multi-leg attachment

Page 45

Special solutions: We make it possible!

Can't find the right product?
We also offer tailor-made solutions!

For example:

SNS attachment point with gripper for the placement of workpieces

Eye bolt with special thread length and nut, e.g. for clearance hole

Thread adapter – if an existing threaded hole is to be used and it is too big

Any questions?
We'll be glad to advise you!

Custom model with additional load ring – suitable, for example, for aligning the hook parallel to the contact surface of the ring with a 90° attachment.

3D design data

The 3D data for the design can be found on the respective product page at www.pfeifer.info.

Notice on safe use

Numerous carrying capacity factors can occur when attaching.

All factors can occur at the same time and affect the working load limit accordingly!

Are there any particularly hazardous conditions?

Clarify the permissibility and the hazard class separately in the case of

- offshore operations
- lifting persons
- the lifting of potentially hazardous loads, such as liquid metals, corrosive substances or nuclear material

Pay attention to the number of load-bearing legs

With symmetrical load distribution, a maximum of 3 attachment points are considered to be load-bearing.

With asymmetrical load distribution, only one attachment point carries the entire load in case of doubt.

Observe the temperature range

The working load limit of attachment points depends among other things on the operating temperature.

When selecting the right attachment points, make sure that the permissible operating temperature is not exceeded/undercut. In addition, working load limit reductions must be made from certain temperature limits (see operating instructions).

Estimate the risk of corrosion

Select the attachment point according to the risk of corrosion.

- For a high degree of protection: Stainless steel
- For a moderate degree of protection: Powder coating
- For a low degree of protection: Painting

Is there an increased dynamic load?

If attachment points are exposed to increased dynamics (without particularly hazardous operating conditions), the attachment points should be larger.

The following applies in case of shocks: Select larger attachment points or reduce the working load limits according to the manufacturer's specifications.

Observe angle of inclination

Please note the permissible load angles of the products.

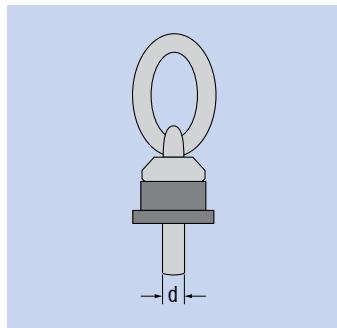

Observe the properties of the load

The load itself must safely absorb the forces generated by the lifting process.

This imposes more constraints on the design, especially with lateral pull.

Choose the right installation location

- The installation location must be easily accessible for fitters and riggers
- Attachment points must always rest flat on the material – observe the manufacturer's instructions!

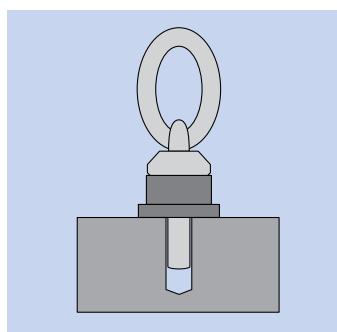

Recommendations for the minimum screw-in depth

100 % working load limit – recommendations for the minimum screw-in depth:

- In steel 1.00 x d
- In cast iron 1.25 x d
- In aluminium 2.00 x d
- In light metals 2.50 x d

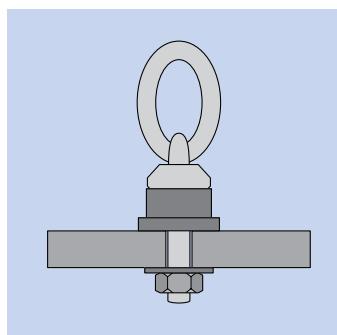

Minimum screw-in depth according to the operating instructions has priority!

The attachment point must always rest flat on the material.

Core hole

- A core hole is required for drilling an internal thread
- The core hole depth must be approximately 1.1 times the thread length

Locking

- Locking with washer EN ISO 887 and nut 10.9 crack-tested EN ISO 4033
- Length of standard nut according to EN ISO 4033 is sufficient for the full working load limit if $1.0 \times d$ is reached.
- Tolerances for clearance holes according to EN 20273a
- For loads with an angle of inclination greater than 6°, a lower working load limit than specified must be expected due to the clearance hole – please contact us if you have any questions!

Observe the assembly notice

- When using eye bolts and eye nuts, observe DIN 580 or DIN 582 respectively
- Welding work must be carried out by a qualified welder, for example according to EN ISO 9606-1

Store attachment points in a dry and clean place

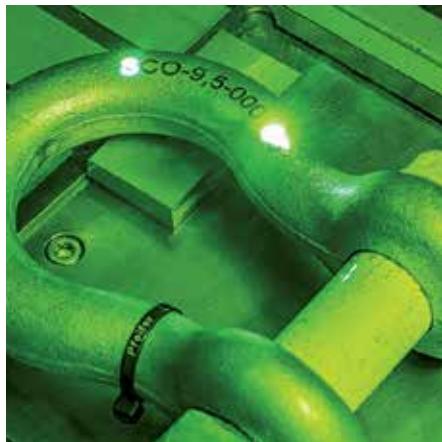

Only competent persons are allowed to use the attachment points

Check attachment points each time before use and replace them in good time

- Inspect them visually for damage and obvious faults
- Check the ease of movement (rotation and hinging) of movable attachment points
- Observe the discarding time specifications

Just play it safe. With clear work equipment marking

Individual work equipment marking enables unambiguous identification when it comes to the legally prescribed testing of attachment devices and load lifting attachments. The possibilities range from stickers to needle and laser engraving.

Test numbers

The possibilities range from stickers to needle and laser engraving.

Colour marking

Marking with annually changing colours indicates when the recurrent inspection is due.

RFID technology

Four standard tag shapes in two frequencies facilitate the registration of your products in the company.

Just give us a call!

Take advantage of our services!

We support you with inspections for the safety and discarding time of your attachment devices.

Services

- Order scheduling
- Mobile and stationary Inspection Service
- Instant repairs
- Spare parts service

- ▶ **Option thread:** with internal thread up to 3 t; Variable thread lengths; with UNC thread and other thread types; with thread adapter
- ▶ **Option Identification mark:** with RFID chip; with engraving of the carrying capacity with SF 4:1; with individual serial number or marking; with LC marking for lashing; with special paint finish

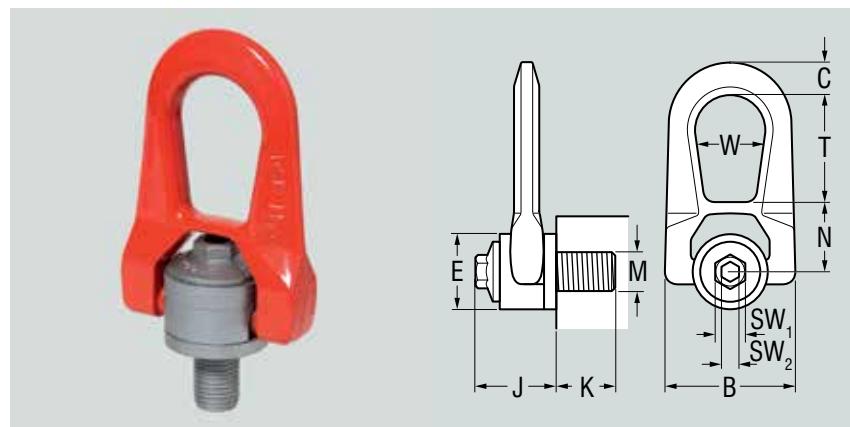

SNS bolt-on swivel

Premium bolt-on swivel for continuous swivel action with individual serial number.

The approval in accordance with ASME B30.26-1010 allows use on the American market and in offshore areas.

Intelligent alternative to the conventional eyebolt.

- ▶ Suspension ring cannot twist
- ▶ Operating temperature:
-20 °C to +200 °C; reduced working load limit outside this range
- ▶ Load angle: +/-90°
- ▶ WLL: 8,5 t to 48 t
- ▶ Thread diameter metric:
M 33 to M 100

Technical data

- ▶ Material: high-strength
- ▶ Standard: DIN EN 1677-1, ASME B30.26-1010
- ▶ Safety factor: 5 or 4
- ▶ Identification mark: Batch number and serial number
- ▶ Rotation: 360°
- ▶ Tilting: 180°

Options on request

- ▶ in special designs; in weldable execution; with centring; with spring for locking the load ring
- ▶ Option thread: with internal thread; Variable thread lengths; with UNC thread and other thread types; with thread adapter
- ▶ Option Identification mark: with engraving of the carrying capacity with SF 4:1; with RFID chip; with individual serial number or marking; with LC marking for lashing; with special paint finish

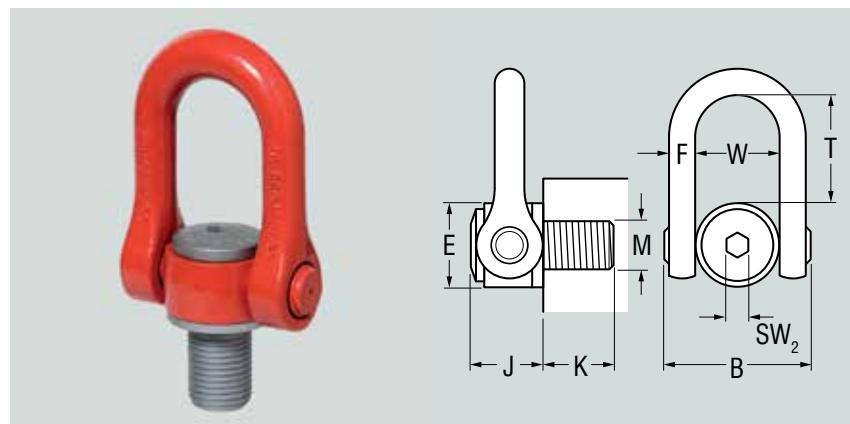

SNB bolt-on swivel

Premium bolt-on swivel for continuous swivel action with individual serial number.

The approval in accordance with ASME B30.26-1010 allows use on the American market and in offshore areas.

Intelligent alternative to the conventional eyebolt.

- ▶ **Made in EU**
- ▶ **Operating temperature:**
-40 °C to +200 °C; reduced working load limit outside this range
- ▶ **Quality grade: 10**
- ▶ **Load angle: 0°–120°**
- ▶ **WLL: 0,3 t to 20 t**
- ▶ **Thread diameter metric:**
M 8 to M 48

Technical data

- ▶ **Standard:** DIN EN 1677-1
- ▶ **Safety factor:** 4
- ▶ **Identification mark:** Batch number
- ▶ **Certification:** H-stamp
- ▶ **Rotation:** 360° (not under load)
- ▶ **Tilting:** 180°

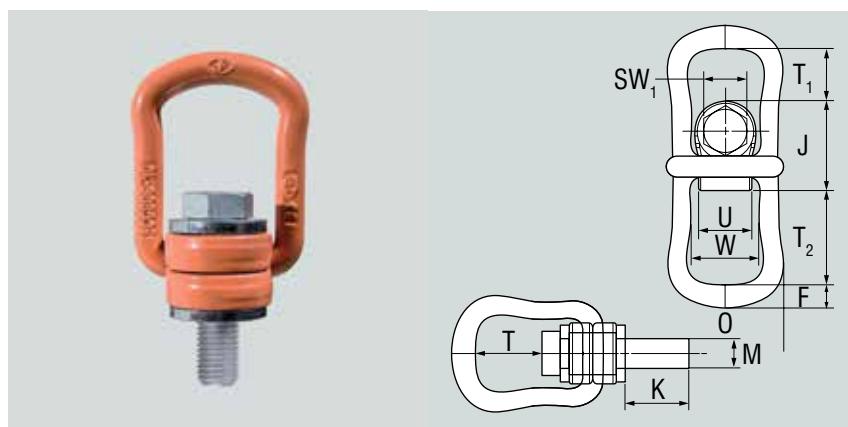

Options on request

- ▶ **Option thread:** Variable thread lengths;
with UNC thread
- ▶ **Option Identification mark:** with RFID chip;
with individual serial number or marking

Pro attachment eye thread

High quality swivelling attachment eye thread with large stirrup, optimally suited for lateral attachment and top price-performance ratio.

- WLL: 0,4 t to 16 t

Technical data

- Standard: DIN EN 1677-1
- Safety factor: 4
- Identification mark: Batch number
- Rotation: rigid
- Tilting: 180°

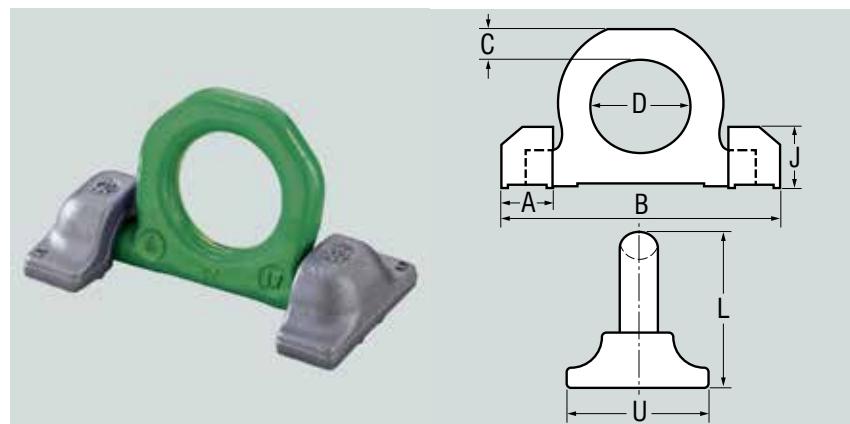

Options on request

- with single load ring
- Option Identification mark: with individual serial number or marking

Weldable hoist ring G10

Weldable hoist ring with two fixed bases, lowline version.

WLL 3-/4-leg asymmetric		t	4	6,7	10	16

- Operating temperature:
-20 °C to +200 °C; reduced working load limit outside this range
- Quality grade: 10
- Load angle: +/-90°
- WLL: 0,4 t to 16 t

Technical data

► Standard: DIN EN 1677-1

► Safety factor: 4

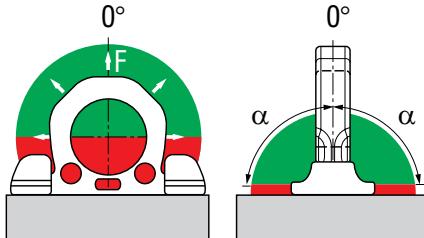

► Identification mark: Batch number

► Rotation: rigid

► Tilting: 180°

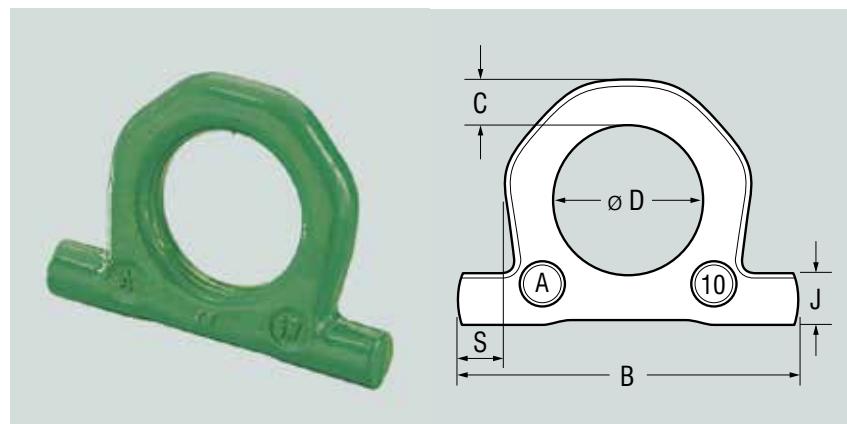

Options on request

- Option Identification mark: with individual serial number or marking

Load ring for hoist ring

Individual load ring for installation in existing constructions.

WLL		kg	4000	6700	10000	16000
Body width	B	mm	105	138	153	205
Bracket height	C	mm	14	20	22	30
Ring diameter internal	D	mm	48	60	64	90
Socket height	J	mm	16	22	27,5	35
Insertion depth	S	mm	16	20	25	30,5
Weight approx.		kg	0,5	1	1,6	3,6
Reference no.			255604	255605	255606	255607

Maximum load weight per type of rigging

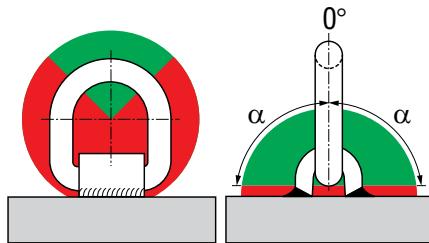

- ▶ **Operating temperature:**
-20 °C to +200 °C; reduced working load limit outside this range
- ▶ **Quality grade:** 8
- ▶ **Load angle:** +/-45°
- ▶ **WLL:** 1,12 t to 37,5 t

Technical data

- ▶ **Standard:** DIN EN 1677-1
- ▶ **Safety factor:** 4
- ▶ **Identification mark:** Batch number
- ▶ **Rotation:** rigid
- ▶ **Tilting:** 180°

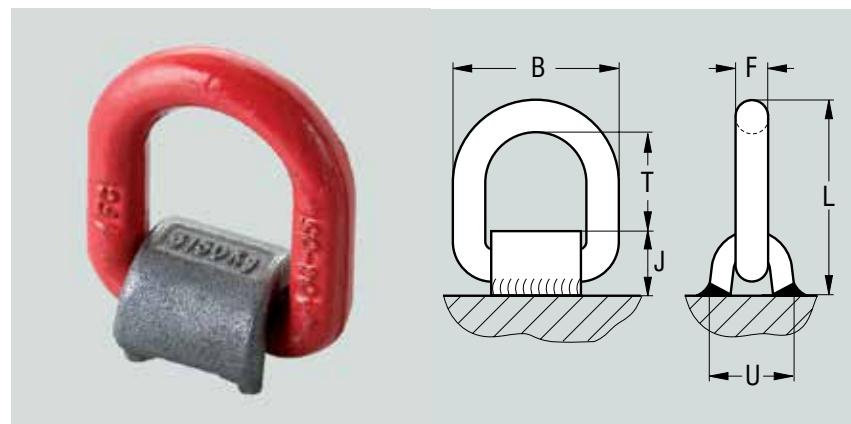

Options on request

- ▶ with spring for locking the load ring;
For use on edges
- ▶ **Option Identification mark:** with individual serial number or marking

Weld-on eye

Weldable attachment eye for maximum working load limit.

Chain slings

Chain slings are particularly robust attachment devices that can easily be shortened and flexibly adapted. Our range according to EN 818 and the Machinery Directive 2006/42/EC includes a very wide modular system for a wide variety of requirements in professional attachment equipment.

Selection aid: Which chain is the right one for my application?

	quality grade 8	Quality grade 10	Quality grade 12	Textile chain sling																
Advantages	Inexpensive entry level	Versatile and individual due to a large selection of add-on fixtures	Maximum efficiency in handling and performance	Combines the positive properties of chain slings and textile attachment devices <ul style="list-style-type: none"> Safe and ergonomic – up to 8 times lighter than a comparable steel chain Flexible in use by shortening Reduced risk of load damage Extremely abrasion-resistant Noise-reducing UV-resistant, resistant to most chemicals and dirt, non-conductive 																
Coating	painted	Cathodic EPD <ul style="list-style-type: none"> Higher corrosion and UV-resistance Higher adhesive (no annoying abrasion or flaking) Ideally suited for crack testing (fluxing) due to lower layer thickness 	Cathodic EPD <ul style="list-style-type: none"> Higher corrosion and UV-resistance Higher adhesive (no annoying abrasion or flaking) Ideally suited for crack testing (fluxing) due to lower layer thickness 	Non-corrosive, made from high-strength Dyneema® fibres

* according to type of rigging and angle of inclination β

The working load limit data (in tonnes) correspond to the use of the attachment devices under normal conditions (symmetrical loading of all legs).

1 If the load is distributed asymmetrically:

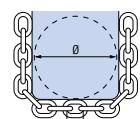

- only one leg may be assumed to be bearing the load in the case of 2-leg suspension gear (see single-leg suspension gear)
- only two load-bearing legs may be counted in the case of 3-/4-leg suspension gear according to German Statutory Accident Insurance regulation DGUV 109-117 (see 2-leg suspension gear). In the case of doubt, however, only 1 leg is to be assumed to be load-bearing!

2 Rocker inclination angle max. 15°

3 When using 2 suspensions devices on one crane hook, the angle of inclination of the attachment devices may not exceed 45°.

4 According to DIN EN this type of rigging is not permitted with transversely rigid (e.g. coated) loop lifting straps.

5 Support arm deflection 180° according to EN 818; reduce WLL by 50% if the support arm Ø is smaller than 3 x chain pitch. Continue to watch out for sharp edges.

Notice on safe use

When designing and applying, take into account the factors influencing the working load limit. All factors can occur at the same time and affect the working load limit accordingly!

Note about using a balancing rocker

- In the case of four-leg suspension gear without a rocker, only a maximum of 3 legs are generally considered to be load-bearing (German Statutory Accident Insurance regulation DGUV 109-117) due to unavoidable manufacturing tolerances
- With symmetrical load distribution and the use of a rocker, 4 legs can be assumed to be load-bearing. This does not apply to an asymmetrical load distribution!
- However, the balancing rocker must not have an angle of inclination of more than 15° when in use.

Asymmetrical load distribution

- With asymmetrical load distribution, only one leg carries the entire load in case of doubt. It is possible to refute this by means of calculation. Different length tolerances of the chain legs must be included in the calculation. Proof can also be provided by means of an experiment, whereby an additional mathematical calculation is desirable.
- Shorteners help to transport the load horizontally and stabilise the load. However, they do not lead to a symmetrical load distribution, nor does the use of a balancing rocker!

Mixing quality grades

- The working load limit always depends on the weakest part of the system. Please contact us if you have any questions!

Angle of inclination

- An angle of inclination > 60° is not allowed, as the forces occurring here on the legs become too large.
- Caution: When using 2 suspensions devices on one crane hook, the angle of inclination of the attachment devices may not exceed $\beta > 45^\circ$.
- Caution: $\beta < 15^\circ$ – Danger of load instability in multi-leg attachment.

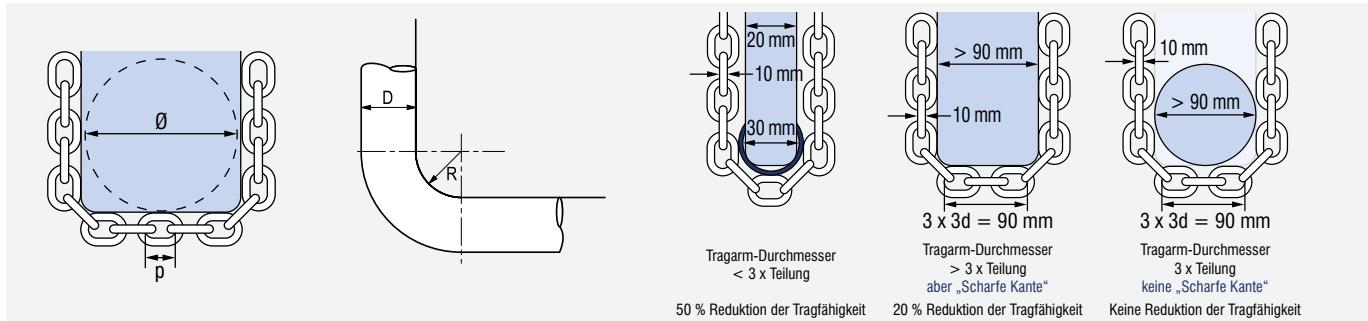

Use as a load-lifting magnetic chain sling

When used as a load-lifting magnetic chain sling (electromagnets): increase by at least one nominal chain thickness – observe the manufacturer's specifications.

Sharp edges

Sharp edges on the goods to be lifted damage chain slings and reduce the working load limit by at least 20 %

- Edges are considered to be sharp if the edge radius R of the load is smaller than the nominal thickness of the round steel chain

- An edge radius of > 2x the chain diameter is recommended
- If the diameter of the support arm is less than 3x the chain pitch, the working load limit must be reduced by 50 %.

Use the PFEIFER edge protection systems from page 304 onwards.

Particularly hazardous conditions

In case of offshore use, the lifting of persons and the lifting of potentially hazardous loads (e.g. liquid metals or corrosive substances), the permissibility and the degree of endangerment must be clarified with our product management or the manufacturer respectively.

High and low temperature conditions

Select chain slings so that the permissible operating temperature is not exceeded/undercut. In addition, working load limit reductions must be made from certain temperature limits (see operating instructions).

Corrosion resistances

- Chain slings with cathodic EPD (high degree of protection)
- Powder coating (moderate degree of protection)
- Painting (low degree of protection)

Higher dynamic stress and shocks

- If the chain is exposed to increased dynamics during its use (but there are no particularly hazardous operating conditions), the chain should be dimensioned larger.
- In the case of impacts, larger-dimensioned chain slings must also be selected or the working load limits must be reduced in accordance with the manufacturer's specifications.
- When there is a risk of moderate impacts, e.g. caused by the slipping of the chain sling during its adjustment to the shape of the load, the working load limit should be reduced by at least 30% or the next larger nominal size should be chosen.

Critical components

- Chain:

In the case of multi-leg chains, the difference between the longest and the shortest single leg may be (assembled):

- Nominal length \leq 2 m: 10 mm max.
- Nominal length $>$ 2 m: 5 mm/m

- Connecting links

It is only permissible to load the connecting link axially (in a 90° line). A load deviating from the linear direction is prohibited!

- Suspension ring:

The inner clearance width of a ring must be at least 20 % wider than the maximum width of the hook. Large suspension links are installed as standard in all our chains, therefore the requirement for standard crane hooks is met.

- Hooks:

As a rule, hooks must always have a safety latch to prevent the load falling out unintentionally.

Load hooks without a safety latch may only be used where no safety latch is prescribed. This can be the case, for example, where opening the safety latch would pose a higher risk than use without a safety latch. For example, in inaccessible or dangerous places, such as foundries. In this case, it must be ensured that the absence of the safety latch does not pose a danger to employees during transport and that an automatic release or unhooking of the hooks is not possible. In the case of special hooks such as plate hooks or fork hooks, the respective specifications in the operating instructions must be observed.

→ For special hooks, see modular system with/without safety latch

Hooks must never be loaded at the hook tip and, in the multi-leg attachment, the hook tips must always point outwards.

Take advantage of our services!

We support you with inspections for the safety and discarding time of your attachment devices.

Services

- Order scheduling
- Mobile and stationary Inspection Service
- Instant repairs
- Spare parts service
- Modern data management

HIT PRO chain sling, single leg Standard hook

Chain sling with MWP standard suspension link and KHSWP standard load hook with larger jaw size for single leg attachment. Ideally suited for all applications with standard crane hooks and for general lifting purposes.

Cathodic EPD provides extreme corrosion-protection.

HIT PRO chain sling, single-leg, can be shortened

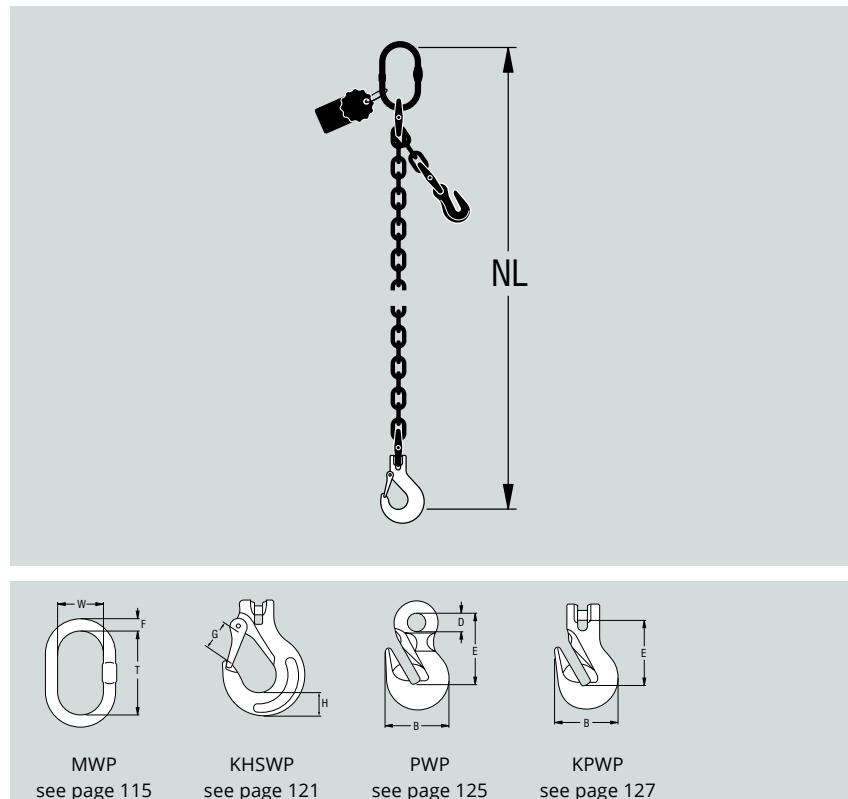

Standard hook

Chain sling with MWP standard suspension link and PWP/KPWP shortener and KHSWP standard load hook with larger jaw size for single leg attachment.

Ideally suited for all demanding applications with standard crane hooks and for general lifting purposes.

The shortener enables horizontal alignment of the load in multi-leg attachment even with difficult transport procedures as well as suitable adjustment of the load for assemblies.

Cathodic EPD provides extreme corrosion-protection.

HIT PRO chain sling, 2-leg, can be shortened Standard hook

Chain sling with VMWP extra-large suspension link and PWP/KPWP shortener and KHSWP standard load hook with large jaw size for 2-leg attachment.

Ideally suited for demanding applications with oversized crane hooks and for general lifting purposes.

The shortener enables horizontal alignment of the load in multi-leg attachment even with difficult transport procedures as well as suitable adjustment of the load for assemblies.

Cathodic EPD provides extreme corrosion-protection.

HIT PRO chain balancing suspension gear with rocker 4-leg

Chain balancing suspension gear with VMWP extra-large suspension link, balancing rocker for increased working load limit and KHSWP standard load hook with larger jaw size for 4-leg attachment. The balancing rocker compensates for the admissible length tolerances of chain legs in 4-leg assemblies, achieving working load limits with 4 load-bearing legs and symmetrical loading. Ideally suited for all applications with oversized crane hooks conforming to DIN 15401 and for general lifting purposes. Cathodic EPD provides extreme corrosion-protection.

HIT PRO – chain balancing suspension gear with rocker

Chain balancing suspension gear can be used with standard MWP suspension link and balancing rocker for increased working load limit and KHSWP standard load hook with larger jaw size in combination with 2-leg chain sling or 2-leg chain sling with rocker. For individual use the working load limit of the individual 2-leg suspensions applies.

The balancing rocker compensates for the admissible length tolerances of chain legs in 4-leg assemblies, achieving working load limits with 4 load-bearing legs and symmetrical loading. Ideally suited for all demanding applications with standard crane hooks and for general lifting purposes. Cathodic EPD provides extreme corrosion-protection.

HIT PRO – chain balancing suspension gear with rocker

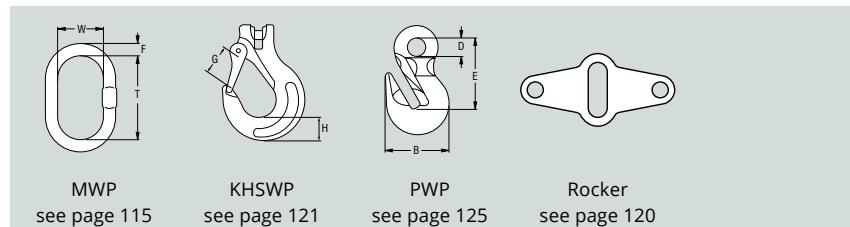

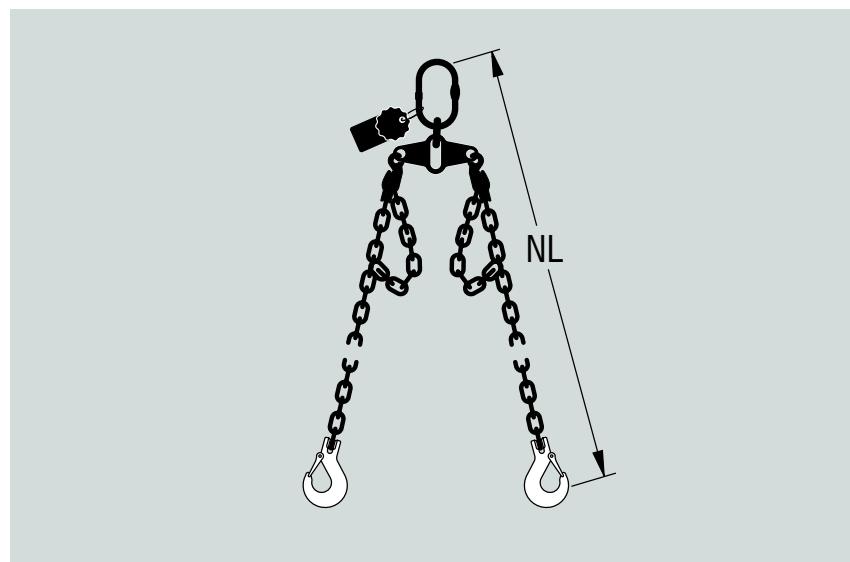

Chain balancing suspension gear can be used with standard MWP suspension link and balancing rocker for increased working load limit, integrated shortener and KHSWP standard load hook with larger jaw size in combination with 2-leg chain sling or 2-leg chain sling with rocker.

For individual use the working load limit of the individual 2-leg suspensions applies.

The shortener enables horizontal alignment of the load in multi-leg attachment even with difficult transport procedures as well as suitable adjustment of the load for assemblies.

Ideally suited for all demanding applications with standard crane hooks and for general lifting purposes.

Cathodic EPD provides extreme corrosion-protection.

HIT PRO profile steel chain

Innovative quality chain sling for installation into chain suspension gear.

Its innovative profile with intelligent use of material at the same cross section offers substantially improved characteristics such as e.g. increased bending strength and significant weight savings. The XLL coating offers extreme corrosion-protection, particular suitability for electromagnetic crack testing and maximum adherence as specified in the ISO 2409, DIN 53 151, ASTM 3002, ASTD 3359 cross-cut test (abrasion resistance of coating, impact strength, etc.), no problem with abrasion or flaking as with powder coating and hence no troublesome paint particles.

The patented material with optimised strength and toughness properties allows its use even at low temperatures.

The revolutionary technology of HIT PRO is distinguished by a unique durability, especially in harsh edge conditions.

► **Safety factor:** 4

► **Identification mark:** Batch number

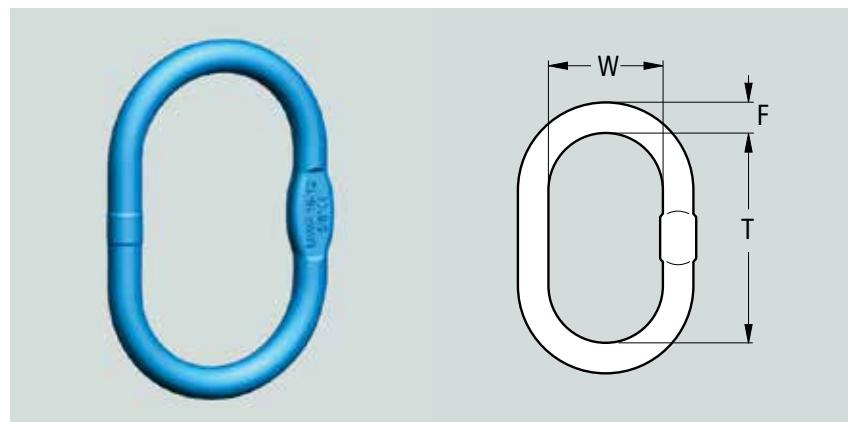

► **Surface:** powder-coated

► **Colour:** blue

HIT PRO KPWP parallel coupling hook

Shortening hook direct connection for easy, secure shortening of chain slings and for loops which should not tighten.

The shortener enables horizontal alignment of the load in multi-leg attachment even with difficult transport procedures as well as suitable adjustment of the load for assemblies.

► **Colour:** blue

HIT PRO-ISWP coupling parallel hook

Shortening hooks with direct connection for simple and particularly safe shortening of chain slings and tool-free positioning on the entire chain length.

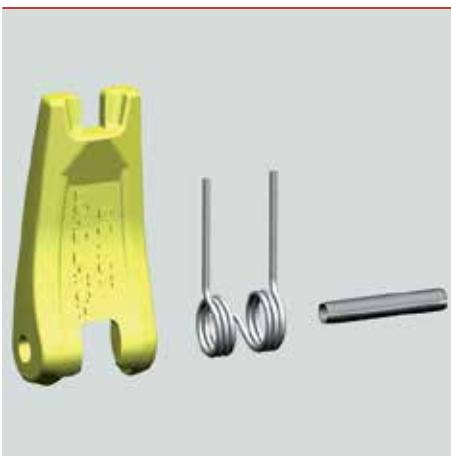

The safety latch protects against unintended unhooking of the chain.

The shortener enables horizontal alignment of the load in multi-leg attachment even with difficult transport procedures as well as suitable adjustment of the load for assemblies.

WLL	kg	5000

including stopper set

HIT PRO spare safety latch, set KHSWP

Spare safety latch for KHSWP coupling load hook comprising of forged safety latch, spiral pin and springs.
For simple replacement in the case of damage or wear.

for nominal size of chain	mm	7	10	13
Weight approx.	kg	0,05	0,05	0,05
Reference no.		273006	273007	273008

HIT PRO spare safety latch, set HSWP

Spare safety latch for HSWP eye load hook comprising of forged safety latch, spiral pin and spring.
For simple replacement in the case of damage or wear.

for nominal size of chain	mm	8	10	13
Weight approx.	kg	0,05	0,05	0,05
Reference no.		228975	228976	228977

HIT PRO spare safety latch, set LHWP

Spare safety latch for HIT PRO LHWP safety eye load hook including springs and spiral pin.
For simple replacement in the case of damage or wear.

for nominal size of chain	mm	8	10	13
Weight approx.	kg	0,05	0,038	0,053
Reference no.		228978	228979	228980

HIT PRO bolt set for CWP connecting link

Spare part for HIT PRO CWP universal connecting link – quality grade 12

For simple replacement in the case of damage or wear.

for nominal size of chain	mm	7	8	10	13
Weight approx.	kg	0,02	0,03	0,04	0,07
Reference no.		228971	228972	228973	228974

HIT PRO spare safety latch, set for PSWP parallel eye hook

Spare safety latch for HIT PRO PSWP parallel eye hook – quality grade 12 with safety latch

For simple replacement in the case of damage or wear.

for nominal size of chain	mm	8	10	13
Weight approx.	kg	0,02	0,03	0,045
Reference no.		228981	228982	228983

HIT PRO, quality grade 12 symbol

Marking according to standard.

Specification of the number of legs, length, nominal chain thickness and working load limit in tonnes at an inclination angle of 0°–45°, 45°–60° and 0°.

Type	PFEIFER	neutral
Weight approx.	kg	0,06
Reference no.		362246

Pfeifer type is not available as a spare part except in connection with chain slings purchased from and assembled at Pfeifer.

Quality inspection tag

Neutral tag for marking the product with the next due accident prevention test.

Type		neutral
Weight approx.	kg	0,06
Reference no.		137906

Mounting ring for quality tags and quality inspection tags

Weight approx.	kg	0,08
Reference no.		136896

HIT chain sling, single leg Standard hook

Chain sling with KMGW/AW standard suspension link and KHSW/HSW standard load hook for single leg attachment.

Ideally suited for all applications with standard crane hooks and for general lifting purposes.

Cathodic EPD provides extreme corrosion-protection.

HIT chain sling, single-leg Suspension link end fitting

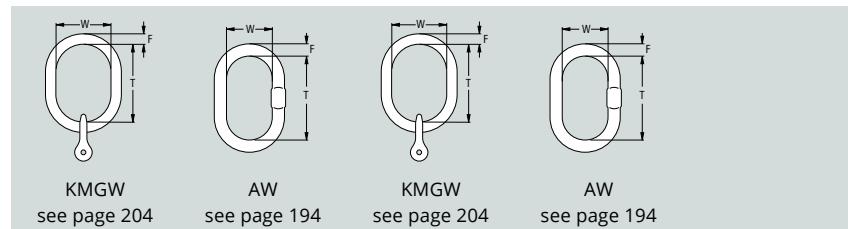

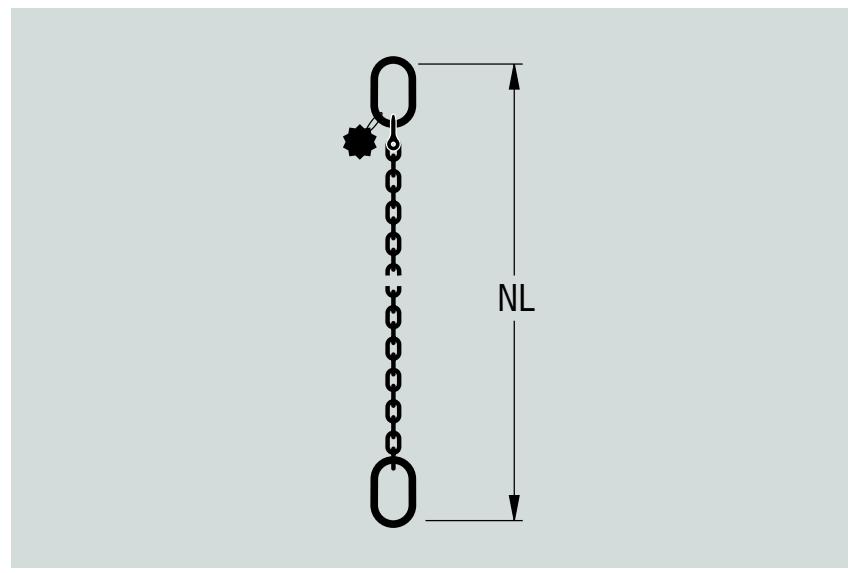

Chain sling with KMGW/AW standard suspension link and KHSW/

HSW standard load hook end link for single leg attachment.

Ideally suited for all applications with standard crane hooks and for
general lifting purposes.

Cathodic EPD provides extreme corrosion-protection.

Further attachments can be easily connected.

HIT chain sling, quality grade 10, 2-leg, can be shortened Standard

Chain sling with VMXKW/AW standard suspension link, integrated shortener/KPW/PW and KHSW/HSW standard load hook for 2-leg attachment.

Ideally suited for all demanding applications with standard crane hooks and for general lifting purposes.

The shortener enables horizontal alignment of the load in multi-leg attachment even with difficult transport procedures as well as suitable adjustment of the load for assemblies.

Cathodic EPD provides extreme corrosion-protection.

HIT chain sling, quality grade 10, 2-leg, can be shortened Safety load hook

Chain sling with VMXKW/AW standard suspension link, integrated shortener/KPW/PWs and self-closing standard KHSW safety load hooks for 2-leg attachment.

Ideally suited for all demanding applications with standard crane hooks and for general lifting purposes.

The shortener enables horizontal alignment of the load in multi-leg attachment even with difficult transport procedures as well as suitable adjustment of the load for assemblies.

Cathodic EPD provides extreme corrosion-protection.

HIT chain sling, 4-leg, can be shortened Standard hook

Chain sling with standard VMXKW/VW suspension link, integrated XKW/KPW/PW shorteners and standard KHSW/HSW load hooks for 4-leg attachment.

Ideally suited for all demanding applications with standard crane hooks and for general lifting purposes.

The shortener enables horizontal alignment of the load in multi-leg attachment even with difficult transport procedures as well as suitable adjustment of the load for assemblies.

Cathodic EPD provides extreme corrosion-protection.

HIT chain sling, 4-leg, can be shortened Safety load hook

Chain sling with VMXKW/VW standard suspension link, integrated shorteners/KPW/PWs and self-closing KHLW safety load hooks for 4-leg attachment.

Ideally suited for all demanding applications with standard crane hooks and for general lifting purposes.

The shortener enables horizontal alignment of the load in multi-leg attachment even with difficult transport procedures as well as suitable adjustment of the load for assemblies.

Cathodic EPD provides extreme corrosion-protection.

HIT chain balancing suspension gear for precast slabs with in-situ topping, quality grade 10 – 8-leg

Chain sling with KMGW standard suspension link, KSCHW coupling shackle and KHSW standard load hook for 8-leg attachment of precast slabs with in-situ topping.

Due to the balancing effect of the coupling shackles the load is distributed evenly over the 8 lifting points so the chain sling is particularly suitable for transport of precast slab elements. Cathodic EPD provides extreme corrosion-protection.

HIT chain balancing suspension gear with rocker, 4-leg

Chain suspension gear with balancing device with VW standard suspension link, balancing rocker for increased working load limit and KHSW/HSW standard load hooks for 4-leg attachment.

The balancing rocker compensates for the admissible length tolerances of chain legs in 4-leg assemblies, achieving working load limits with 4 load-bearing legs and symmetrical loading.

Ideally suited for all demanding applications with standard crane hooks and for general lifting purposes.

Cathodic EPD provides extreme corrosion-protection.

HIT – chain balancing suspension gear with rocker 2-part

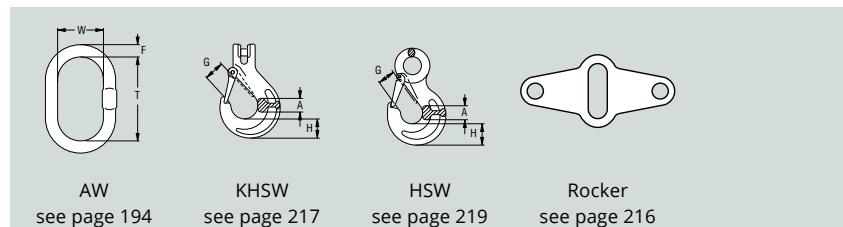

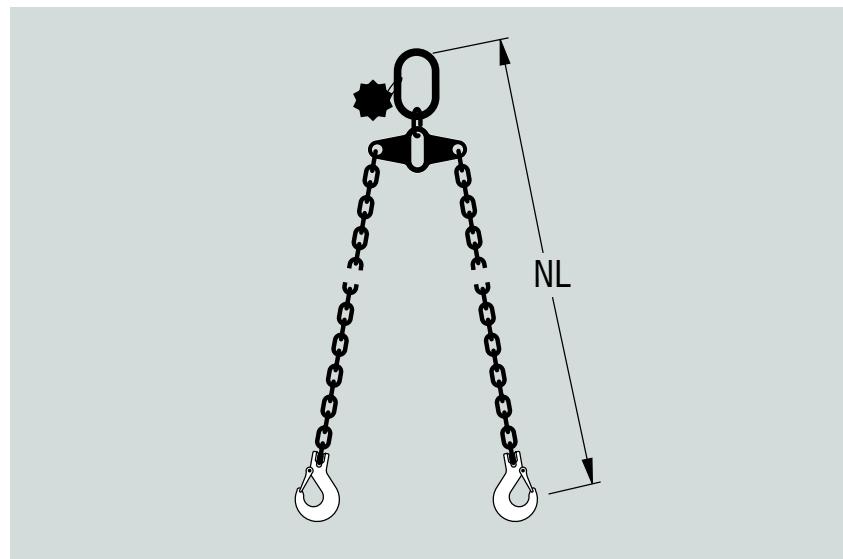

Chain balancing suspension gear can be used with standard AW suspension link, balancing rocker for increased working load limit and KHSW standard load hook in combination with 2-leg chain sling or 2-leg chain sling with rocker.

For individual use the working load limit of the individual 2-leg suspensions applies.

The balancing rocker compensates for the admissible length tolerances of chain legs in 4-leg assemblies, achieving working load limits with 4 load-bearing legs and symmetrical loading.

Ideally suited for all demanding applications with standard crane hooks and for general lifting purposes.

Cathodic EPD provides extreme corrosion-protection.

HIT – chain balancing suspension gear with rocker 2-part, can be shortened

Chain balancing suspension gear can be used with standard AW suspension link, balancing rocker for increased working load limit, XKW shortener and KHSW standard load hook in combination with 2-leg chain sling with optional rocker.

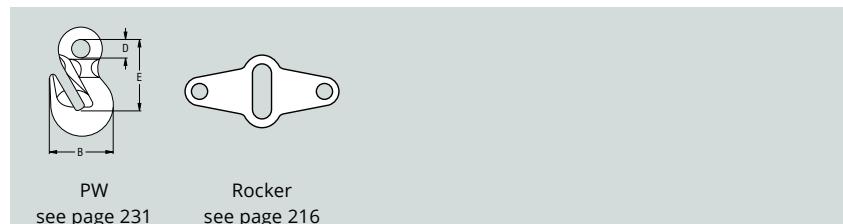

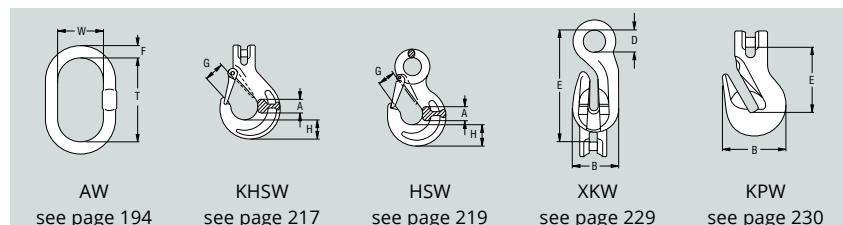

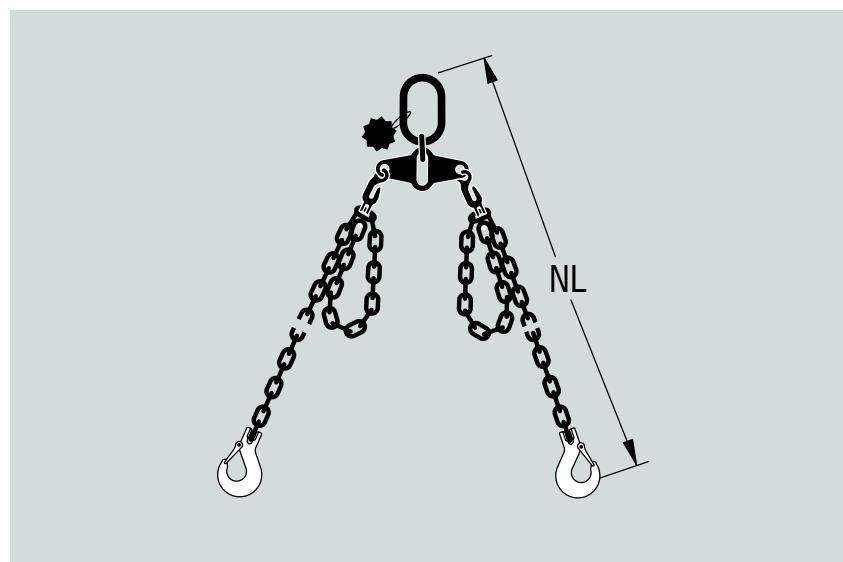

For individual use the working load limit of the individual 2-leg suspensions applies.

The balancing rocker compensates for the admissible length tolerances of chain legs in 4-leg assemblies, achieving working load limits with 4 load-bearing legs and symmetrical loading.

The shortener enables horizontal alignment of the load in multi-leg attachment even with difficult transport procedures as well as suitable adjustment of the load for assemblies.

Ideally suited for all demanding applications with standard crane hooks and for general lifting purposes.

Cathodic EPD provides extreme corrosion-protection.

HIT medium tolerance round steel chain

Quality chain sling for installation into chain suspension gear. The XLL coating offers extreme corrosion-protection, particular suitability for electromagnetic crack testing and maximum adherence as specified in the ISO 2409, DIN 53 151, ASTM 3002, ASTD 3359 cross-cut test (abrasion resistance of coating, impact strength, etc.), no problem with abrasion or flaking as with powder coating and hence no troublesome paint particles.

HIT CARW textile coupling

Connecting link especially for connection of textile attachment device, e.g. round slings or lifting straps on load hooks or suspension rings.

Due to the wide contact radius of the textile coupling, the working load limit of the textile attachment device is retained.

HIT balancing rocker

Balancing rocker to increase of the working load limit in the 4-leg suspension gear.

The balancing rocker compensates for the admissible length tolerances of chain legs in 4-leg assemblies, achieving working load limits with 4 load-bearing legs and symmetrical loading. Rotating the rocker by 180° can double the service life.

HIT PSW parallel eye hook

Shortening hook with eye connector for easy, particularly secure shortening of chain slings and for loops which should not tighten. The safety latch protects against unintended unhooking of the chain.

The shortener enables horizontal alignment of the load in multi-leg attachment even with difficult transport procedures as well as suitable adjustment of the load for assemblies.

Can be used for load securing.

CAR textile coupling

Especially for the connection of textile attachment devices, from 21.2 t to 31.5 t.

Suitable for the connection of round slings or lifting straps, for example, to load hooks or suspension rings.

Due to the wide contact radius of the textile coupling, the working load limit of the textile attachment device is retained.

- ▶ with 2 coupling links
- ▶ Quality grade: 8
- ▶ WLL: 2 t to 12,5 t

Technical data

▶ Insulating effect: 1000 V

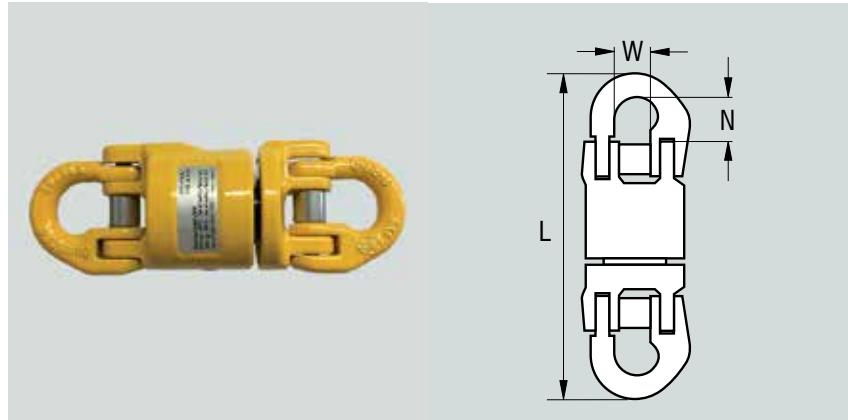

Insulating swivels

Electrically insulated swivel with 2 coupling links for surge protection.

Perfect rotation even under load.

Simple connection with chains or ropes.

The thrust roller bearing is dust-protected and watertight, so the swivel can be used without restriction in all areas (including underground and underwater).

for nominal size of chain	mm	8	10	13	16	19

Textile attachment devices

Just like chain slings, textile attachment devices establish the connection between the load-carrying device or load lifting attachment and the load. Due to their low weight, they are easy to handle and their soft flexible surface is particularly gentle on the load. With Polytex®, PFEIFER offers a mature assortment that has been continuously improved over the last 35 years. All Polytex® products are suitable for safe attachment according to the Machinery Directive 2006/42/EC, EN 1492 Parts 1+2 and DIN 60005.

Selection aid: Which textile attachment device is the right one for my application?

Question:

For which application is the attachment device needed?

Universal and lightweight attachment devices for every application on suitable holders

Lightweight alternative to the chain sling.
To connect from the crane to an attachment point

Wide contact surface on the load; [®]Distribution of the pressure of the load over a larger area
[®]Gentler lifting than with a narrow attachment device

Lightweight alternative to grommet, wire rope sling, chain sling. Made of high-strength material (Dyneema)

- Up to 8 times lighter than a comparable steel chain
- Made of several layers of high-strength Dyneema® fibre strap arranged in a Möbius loop, sewn on both sides
- The only textile attachment device that can be shortened easily and individually

The Polytex® advantages:

Polytex® quality means: We only use high-quality tested base material. Our qualified employees manufacture in our own sewing department and test breaking forces, safety factors, elongation behaviour and other quality features in our laboratories.

Special solutions: We make it possible!

In our own sewing department, we quickly and reliably manufacture textile attachment devices in special lengths and special versions. Let us advise you!

Examples of custom solutions:

Lifting strap with sewn-on metal stirrup

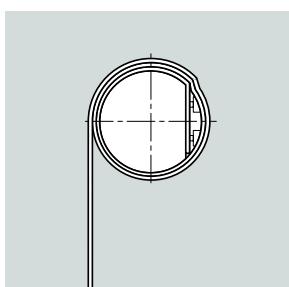

Lashing strap with loop

Special lifting mat with large loop

Special lifting mat with small loop

Further examples:

- Round sling suspension gear with other end components such as oval rings, shackles, special hooks, etc.
- Combined textile/chain suspension gear

- ▶ Expert advice
- ▶ Fast availability, high-quality execution
- ▶ Manufacturing according to DIN/EN standards
- ▶ Testing with our own testing machines

Our tip: Dyneema®

We also supply and manufacture textile attachment devices from Dyneema®;

This high molecular polyethylene (HMPE) is highly abrasion-resistant, minimises damage to sensitive loads and increases safety for employees. Dyneema® is the world's strongest synthetic fibre. It is up to eight times lighter than steel and extremely durable.

The abrasion of HMPE fibres compared to polyester

Working load limit table

POLYTEX® lifting straps, round slings and round sling suspension gear – EN 1492-1/2 (working load limit in t*)									
Angle of inclination β	①	up to 6°	up to 45° ①	45 to 60° ① + ②	up to 45° ① + ②	45 to 60° ① + ② + ①	up to 45° ①	45 to 60° ① + ②	
Load factor	1	0,8	2	1,4	1	1,12	0,8	2,1	1,5
violet	1,00	0,80	2,00	1,40	1,00	1,12	0,80	2,10	1,50
green	2,00	1,60	4,00	2,80	2,00	2,24	1,60	4,20	3,00
yellow	3,00	2,40	6,00	4,20	3,00	3,36	2,40	6,30	4,50
grey	4,00	3,20	8,00	5,60	4,00	4,48	3,20	8,40	6,00
red	5,00	4,00	10,00	7,00	5,00	5,60	4,00	10,50	7,50
brown	6,00	4,80	12,00	8,40	6,00	6,72	4,80	12,60	9,00
blue	8,00	6,40	16,00	11,20	8,00	8,96	6,40	16,80	12,00
orange	10,00	8,00	20,00	14,00	10,00	11,20	8,00	21,00	15,00

*) according to type of rigging and angle of inclination β

The working load limit data (in tonnes) correspond to the use of the attachment devices under normal conditions (symmetrical loading of all legs).

1 If the load is distributed asymmetrically:

- only one leg may be assumed to be bearing the load in the case of 2-leg suspension gear (see single-leg suspension gear)
- only two load-bearing legs may be counted in the case of 3-/4-leg suspension gear according to German Statutory Accident Insurance regulation DGUV 109-017 (see 2-leg suspension gear). In the case of doubt, however, only 1 leg is to be assumed to be load-bearing!

2 When using 2 suspensions devices on one crane hook, the angle of inclination of the attachment devices may not exceed 45°.

3 According to DIN-EN, this method of attachment is not permitted with transverse strips (e.g. coated) loop lifting straps.

Further factors that reduce the working load limit such as extreme temperature ranges etc. are to be taken into account according to the respective EN standard.

Attachment device tests

According to German Statutory Accident Insurance regulation DGUV 109-017, the following must be examined by qualified persons/experts:

- Attachment devices at intervals of 1 year at the most
- Chain slings additionally for freedom from cracks at intervals of 3 years at the most, in Switzerland 2 years at the most.

According to ÖNORM M9611, the following must be examined by an expert:

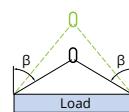

- Attachment devices at intervals of 1 year at the most
- Chain slings additionally for freedom from cracks at intervals of 2 years at the most.

Textile attachment devices must not be used on sharp edges! Attachment only with sufficient edge protection!

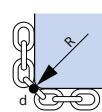

Operating temperature range:

Round slings and lifting straps (PES):
100 % working load limit between -40 °C and +100 °C

Angle of inclination β = angle of leg of an attachment device to the vertical line.

Angles of inclination > 60° are impermissible!

Edges are considered to be sharp if the edge radius R of the load is smaller than the thickness d of the attachment device.

Notice on safe use

Textile attachment devices may only be used by qualified persons. It is the employer's duty to ensure this. In addition, follow these basic safety rules:

- Angles of inclination $> 60^\circ$ are impermissible!

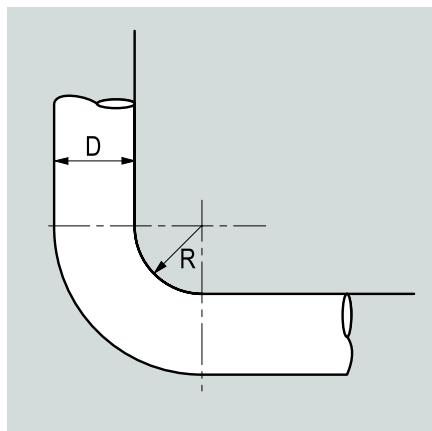

Angle of inclination β = angle of leg of an attachment device to the vertical line

- Do not use textile attachment devices on sharp edges!

Sharp edges on the material to be lifted are a particular danger to the service life and the accident-free operation with attachment devices.

See page 260.

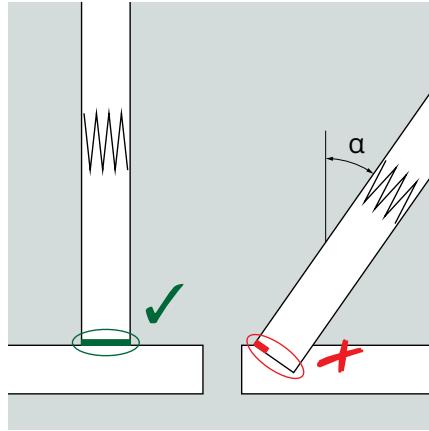

Edges are considered to be sharp if the edge radius R of the load is smaller than the thickness of the lifting strap or round sling

Use the PFEIFER edge protection systems from page 312 onwards.

- Even loading is required

Attach flat-woven lifting straps and round slings to the load in such a way that an even load is achieved over the entire width.

Correct: loading over the entire width;
Wrong: loading over a partial area

- Never knot or twist lifting straps or round slings

- Avoid damage to the label

Keep the label away from the load, hook or hitch.

- Observe the position of the seam!

The seam should always be in the straight part of the lifting strap. Seams should not be located above the hook area or other lifting devices!

- Observe the minimum length of the loop

If a loop lifting strap is attached to a hook, the following applies:
Minimum loop length = $3.5 \times$ thickness of the hook. The angle formed with the loop must not be greater than 20° .

Take advantage of our services!

We support you with inspections for the safety and discarding time of your attachment devices.

Services

- Order scheduling
- Mobile and stationary Inspection Service
- Instant repairs

Selection aid: Which round sling is the right one for my application?

This selection matrix gives an overview of the Polytex® round slings.
Further application advice is offered by the PFEIFER internal and field service.

Question:
Is a particularly high working load limit required?

Question:
Is a moderate to high working load limit required?

Question:
Does the application require a round sling with a particularly robust sleeve?

Question:
Should the round sling be specially protected by a double sheath?

**Eco-Tex
round slings**

- ▶ Extremely durable
- ▶ Integrated wear indicator
- ▶ Operating temperature:
-40 °C to +100 °C
- ▶ Material: High-strength polyester fibres
- ▶ WLL: 1 t to 10 t

Technical data

- ▶ Standard: DIN EN 1492-2
- ▶ Safety factor: 7
- ▶ Identification mark: Imprinted working load limit; Woven-in tonnage stripes

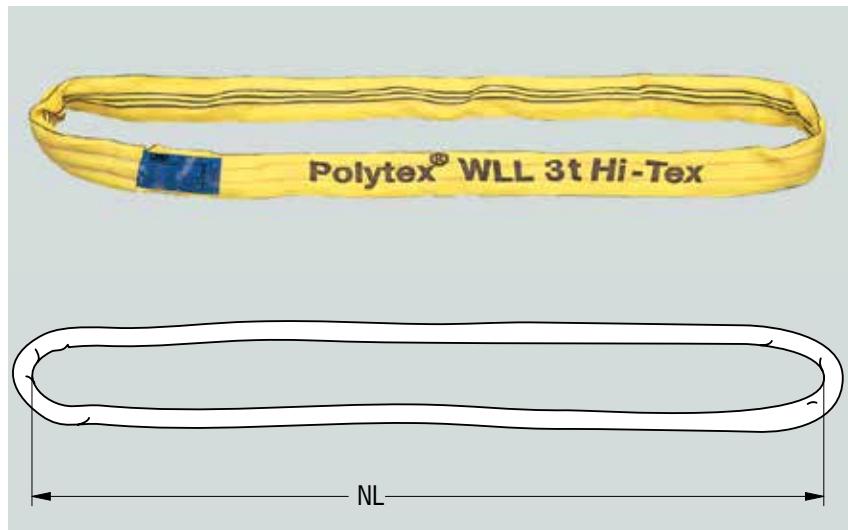

Options on request

- ▶ further useful lengths; further working load limits

Polytex® round sling Hi-Tex

Round sling with premium polyester sleeve in herringbone weave for maximum stresses.

As soon as the woven-in, coloured wear indicator on the surface of the protective sleeve is exposed, it is necessary to intensify monitoring of the damaged zones for the discarding time of the round sling.

You will find suitable edge protection systems from page 312

- ▶ Lighter than conventional XXL round slings
- ▶ Operating temperature: -50 °C to +60 °C
- ▶ Material: High performance fibres made of HMPE
- ▶ WLL: 10 t to 100 t

Technical data

- ▶ Standard: similar to DIN EN 1492-2
- ▶ Safety factor: 7
- ▶ Identification mark: Imprinted working load limit

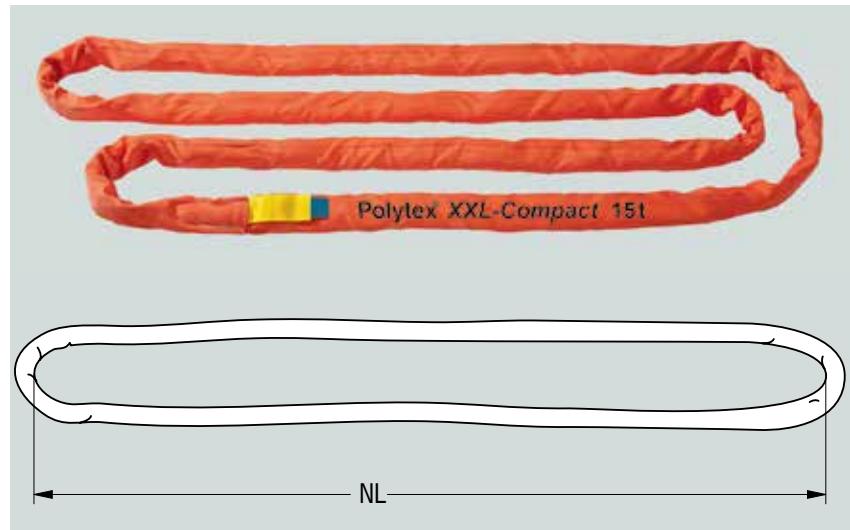

Options on request

- ▶ further useful lengths; further working load limits

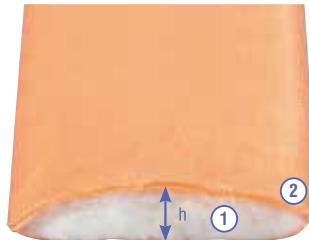

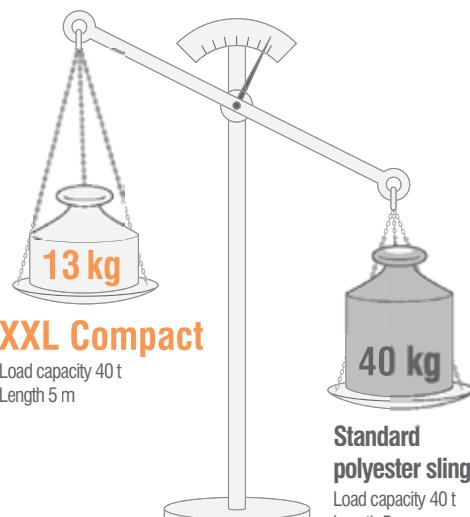

Polytex® round sling XXL-Compact

Compact, lightweight heavy duty round sling with high-performance Dyneema® fibre core for high working load limits.

Special double-sleeve design with closed surface to protect objects from penetrating the load-bearing core fibres.

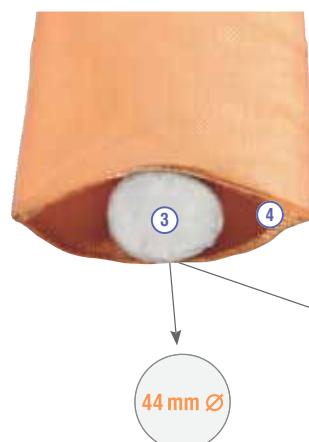

You will find suitable edge protection systems from page 312

Load-bearing core (1) of a round sling in natural distribution (protective sheath (2))

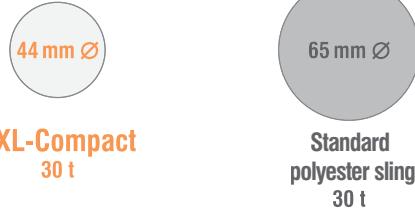

If the thickness (H) is greater than the edge radius, it is called a sharp edge!

Load-bearing core (3) of a round sling combined into a round fibre bundle (comparison base) (protective sheath (4)).

The smaller the core diameter, the smaller the thickness and the support width!

XXL-Compact
30 t

Standard polyester sling

Lifting strap selection aid

This selection matrix gives an overview of the Polytex® lifting straps. Further application advice is offered by the PFEIFER internal and field service.

Question:

Does the lifting application require a particularly large contact width?

Page 281

Polytex® lifting strap with loops

Sensitive surfaces or pressure-sensitive loads, 1-ply, loops reinforced and tapered at both ends

- Lifting strap with particularly large contact width
- Good pressure distribution and low surface pressure
- For particularly sensitive loads

Question:

Should the predominant attachment method be choker hitch?

Page 285

Polytex® lifting strap with sling hook

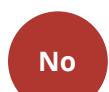

Ideal in choker hitch with a saving of time and low wear, 2-ply, with a loop at the crane end

With a sling hook at the load end

- For fast, easy and low-wear load wrapping (choker hitch)
- Saving of time, because the sling hook means that the strap doesn't have to be detached from the crane hook

Question:

Are there any hazards due to operation in harsh conditions or sharp edges?

Page 287

Polytex® lifting strap with push-through round steel stirrups

Sturdy steel stirrups instead of loops, 2-ply, push-through round stirrups at both ends

- Sturdy steel stirrups reduce wear in the load lifting area of the strap
- Well suited in choker hitch with low wear of strap or loop

Polytex® lifting strap with additional PU coating

For rough surfaces and sharp edges, 2-ply, with loops or with round stirrups

- Lifting strap coated on one or both sides.
- With stirrup or loop
- Used with very rough load surfaces
- Particularly resistant to edges and abrasion
- Very good fabric protection
- Reduced risk of slipping

Page 281

Page 291

Page 286

Page 292

Polytex® lifting strap with loops

Versatile all-round lifting strap, 2-ply, loops reinforced and tapered at both ends

- General lifting purposes and attachment methods
- Very well suited to most applications
- Usable anywhere

Polytex® endless lifting strap

Very flexible all-round lifting strap, 1-ply

- Quick and easy slinging in choker hitch
- Used with spreader beams or as an all-round solution in the workshop
- Usable anywhere

Polytex® heavy-duty lifting strap with loops

High working load limit for compact support dimensions, 4-ply, loops reinforced and tapered at both ends

- General lifting purposes and attachment methods with heavy loads
- Comparatively narrow strap dimensions in a working load limit comparison

Polytex® endless lifting strap, 2-ply

Flexible heavy-duty lifting strap with compact contact dimensions, 2-ply

- General lifting purposes and attachment methods with heavy loads
- Comparatively narrow strap dimensions in a working load limit comparison
- Quick and easy slinging in choker hitch
- Ideal for use with spreader beams

**For use in special environmental conditions (temperatures, acids or caustic solutions, etc.), please contact our PFEIFER internal and field service.
Here you will receive competent advice.**

- ▶ Large contact width
- ▶ Operating temperature:
-40 °C to +100 °C
- ▶ Material: Polyester fabric
- ▶ Material layers: single-layer
- ▶ WLL: 0,5 t to 5 t

Technical data

- ▶ Standard: On the basis of DIN EN 1492-1
- ▶ Safety factor: 7
- ▶ Identification mark: Imprinted working load limit

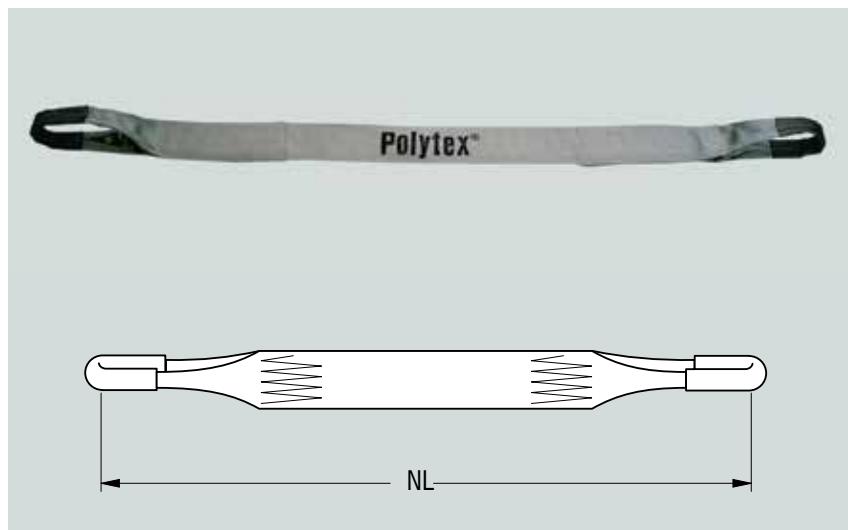

Options on request

- ▶ further useful lengths

Polytex® lifting strap 1LA

Single-layer lifting strap with reinforced end loops tapered to around half the width.

Exception: the end loops of the 30 mm strap are untapered. The wide contact surface provides for an even distribution of pressure to the load. Gentle on surfaces. For lifting delicate goods.

Polytex® lifting strap SH

Two layer lifting strap with sling hook with safety latch for lifting operations in choker hitch.

Saves time for frequent choker hitching because the sling hook ensures that the strap doesn't have to be unhooked from the crane hook.

The strap lies fully within the sling hook which makes it wear-resistant.

Polytex® lifting strap RB

Two-layer lifting strap with push-through round steel stirrups for easy looping around the load.

Reinforced loops in the round steel stirrup area.

The steel stirrups reduce wear and tear in the strap's load carrying area.

In choker hitching, the strap lies evenly in the stirrup.

Polytex® lifting strap 1PU

Double layer lifting strap with PU coating on one side with back bulge and reinforced end loops tapered to around half the width for demanding lifting procedures.

The lifting strap is particularly suited for use on very rough load surfaces because the coating is extremely edge and abrasion-resistant.

Can be used directly (without additional edge protection) on sharp edges.

Polytex® endless lifting strap 2LA

Two-layer endless lifting strap with double working load limit compared to single-layer endless lifting straps with the same strap width.

The lifting strap has relatively narrow strap dimensions when comparing the working load limit and is ideal for use with cross beams.

- ▶ Easy handling: light and flexible
- ▶ Long service life: wear-resistant and corrosion-free
- ▶ Operating temperature: -40 °C to +70 °C
- ▶ Material: Dyneema®
- ▶ WLL: 10 t to 100 t

Technical data

- ▶ Standard: On the basis of DIN EN 1492-4
- ▶ Safety factor: 7
- ▶ Manufacturing tolerance: $\frac{1}{2}$ rope diameter in the length

Options on request

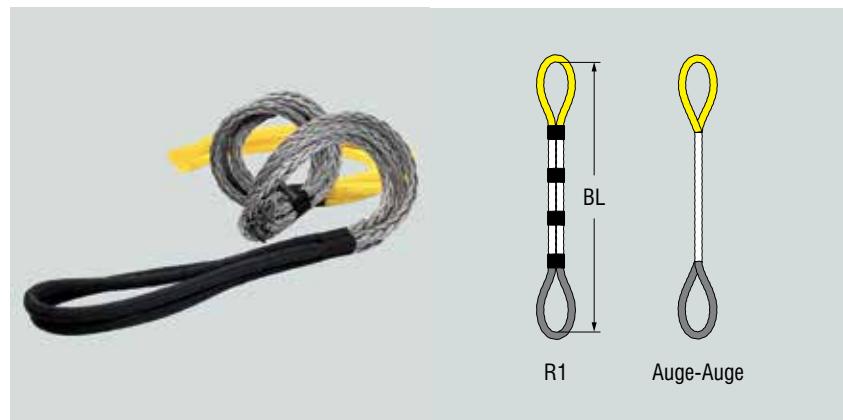

- ▶ Individual eye size, application-specific lengths and multi-leg suspension gear

Updraft® CustomSling

Updraft® CustomSlings easily hook even the heaviest loads, are made exactly to measure and meet precision standards beyond all norms.

They are technically far superior to conventional polyester slings and offer everything heavy and hard steel wire rope slings can, while remaining light and flexible.

Updraft® CustomSlings provide textile handling-characteristics which means far less risk of injury. In most cases they can be handled without auxiliary equipment.

Product range overview – Fibre Tech Textile Chain sling

1-leg

Standard hook

2-leg

Standard hook

4-leg

Standard hook

Page 305

Standard hook,
can be shortenedStandard hook,
can be shortenedStandard hook,
can be shortened

- Up to 8x lighter than steel chains
- Extremely resistant to acids, caustic solutions, petrol and oils
- Very good UV resistance
- No damage to load and cargo
- Pleasant handling

Note on the configuration of textile chains

A distance of at least 5 chain links must be provided between the suspension ring and the shortening hook.

In the shortened state there must also be at least 5 chain links between the shortener and the hook at the load end.

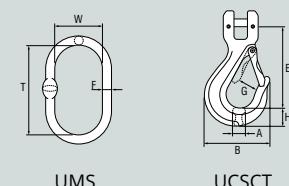

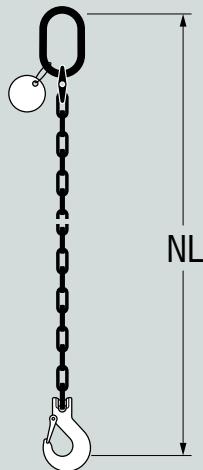

- ▶ Extremely light and flexible
- ▶ Operating temperature:
-40 °C to +70 °C
- ▶ WLL: 2,6 t to 6,8 t

Technical data

- ▶ **Shortening:** cannot be shortened
- ▶ **Legs Quantity:** single-line

Fibre Tech textile chain sling, single-leg

Textile chain sling for single leg attachment.

Edge protection and abrasion protection systems

Attachment devices and the load are particularly stressed where they come into contact with each other. Edge protection and abrasion protection systems extend the service life of the attachment device or lashing equipment and protect the load.

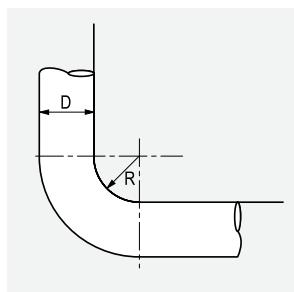

In addition, further application possibilities for textile attachment devices are opened up that were previously reserved only for sturdy steel chains.

Edge protection is mandatory with sharp edges.

An edge is considered to be sharp when the edge radius R of the load is less than

- the thickness of the lashing strap
- the diameter of the rope
- the thickness of the lifting strap or the round sling
- the nominal thickness of the round steel chain

See also German Statutory Accident Insurance regulation DGUV 109-017 or the applicable national regulations.

Please note:

Simple underlays such as fire hoses are no substitute for edge protection!

If you are not sure whether an edge is sharp or not, use an edge protector as a precaution.

Selection aid:

Which edge or abrasion protector is the right one for my application?

Question:

What is to be protected?

- ▶ For round slings and lifting straps
- ▶ Operating temperature:
0 °C to +70 °C
- ▶ Material: Polyurethane

Edge protectors with magnet

Edge protectors made of wear-resistant polyurethane with magnetic attachment for easy positioning, for protection of lifting straps, round slings and lashing straps against damage and premature wear.

The edge protector is particularly suitable for lifting extremely sharp-edged loads e.g. sheet metal coils.

for round slings WLL max	kg	1000	4000	6000	8000

- Light and elastic
- Material: HMPE

HMPE edge protection sleeve

Edge protection sleeve made of flexible, lightweight HMPE material for protection of lifting straps, round slings and lashing straps against damage and premature wear.

The sleeve offers high edge stability and abrasion resistance and so can be used for many safe lifting procedures.

for round slings WLL max	kg	2000	4000	6000	10000

- Extremely flexible
- Material: HMPE

HMPE edge protector

HMPE edge protectors with four hook and loop strips for quick and secure positioning, for protection of lifting straps, round slings and lashing straps against damage and premature wear.

This edge protection ring offers high edge stability and abrasion resistance with extremely long service life and adapts ideally to the respective edge form.

for round slings WLL max	kg	15000	25000	40000	55000
for lifting belt width max	mm	150	180		250

- ▶ Less load slippage due to grippy surface
- ▶ Belt slides easily into protective hose
- ▶ Outstanding edge stability
- ▶ Operating temperature:
0 °C to +70 °C
- ▶ Material: Polyester and polyurethane

Edge protection sleeve Duplex

Woven polyester sleeve, PU coated on all sides, particularly as all-round protection of single/two-layer lifting straps and round slings against damage and premature wear. These edge protection sleeves are distinguished by high structural, wear and tear resistance and very good elasticity, good chemical resistance and no ageing. Proven under the harshest conditions.

- ▶ Adapts flexibly to edge angle
- ▶ Operating temperature:
0 °C to +70 °C
- ▶ Material: Polyurethane

Edge protection profile for chain and rope

Polyurethane edge protection sleeve with round apertures for protection of textile sling gear and particularly of ropes or chains. The attachment device is drawn through the apertures. Point loads are hereby distributed over a surface.

The diameter of the attachment device should always be a few millimetres less than the diameter of the aperture. This guarantees that the attachment device can slide through the edge protection system.

for nominal rope Ø	mm	30	50
for nominal size of chain	mm	8	13
Weight approx.	kg	0,3	1
Reference no.		217501	217502

- ▶ Optimal force distribution
- ▶ Permits load turning with the use of chains or ropes
- ▶ Operating temperature: 0 °C to +70 °C
- ▶ Material: Polyurethane

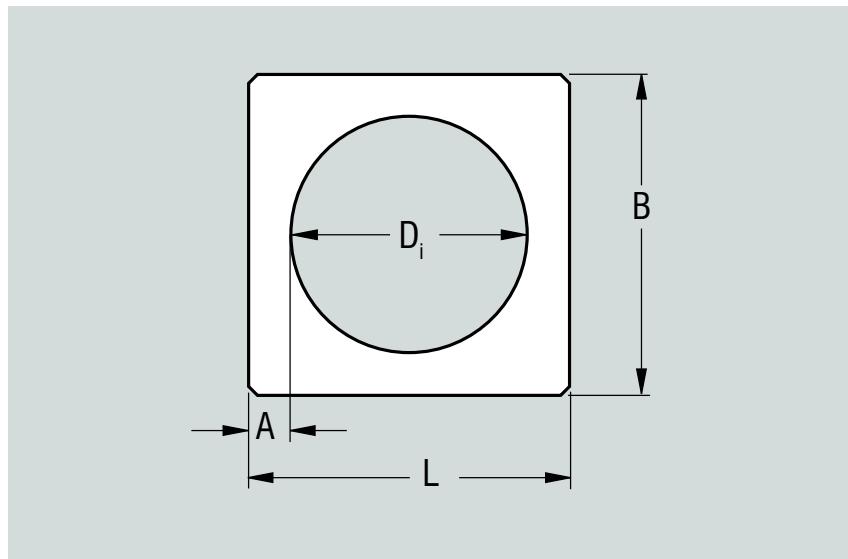

Edge protection sleeve for chain and rope

Transparent polyurethane edge protection sleeve with round aperture for protection of textile attachment devices and especially ropes or chains.

The edge protection sleeve is rectangular on the outside. This provides a greater contact surface for the load and the force distribution is optimised.

This edge protection sleeve is distinguished by high wear-resistance, extreme cutting resistance, very good elasticity, good chemical resistance and no ageing.

The diameter of the attachment device should always be a few millimetres less than the diameter of the aperture. This guarantees that the attachment device can slide through the edge protection system.

for nominal size of chain		mm	13	16	10	8	6
Sleeve wall thickness	A	mm	5	5	5	5	5
Standard usable length	NL	m	1	1	1	1	1
Reference no.			496045	496046	496047	496048	496049

- ▶ Optimal protection of the attachment device and load
- ▶ Operating temperature: 0 °C to +70 °C
- ▶ Material: Polyurethane

Edge protection sleeve Flexoclip

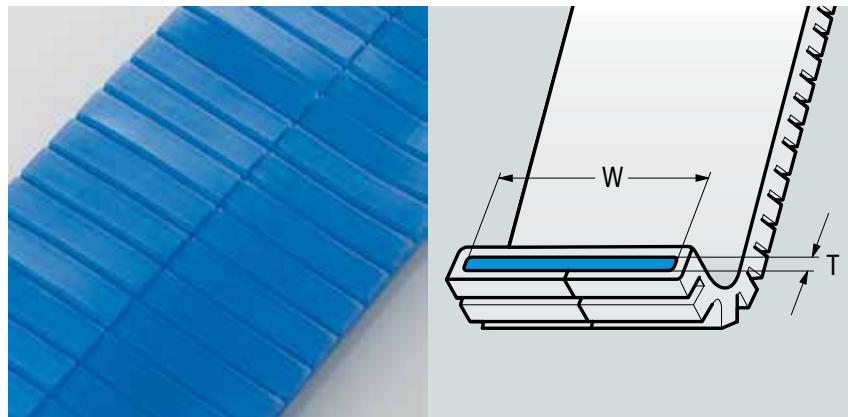

Extremely flexible, resistant and durable polyurethane edge protection sleeve for protection of lifting straps, round slings and lashing straps against damage and premature wear.

The innovative Flexoclip protective system enables the attachment device to slide through the edge protection sleeve, thus remaining automatically in top position and being protected from sharp edges, no slippage of the load in the sleeve!

The slotted ribs permit easy application and bending around an edge.

For later assembly the edge protection sleeve can be cut at the defined interface.

Also suitable for the securing of loads, internal coating guarantees optimal sliding of the harness strap.

Wire rope slings

The name PFEIFER has stood for ropes for over 440 years. Even today, we manufacture, assemble and distribute highly specialised ropes worldwide, from elevator to crane ropes. This competence is also reflected in our EN 13414-compliant wire rope slings, which stand for quality, efficiency and versatility.

Selection aid: Which wire rope sling is the right one for my application?

Question:

Which properties are needed?

Rope/chain
combination
suspension gear

We also test and carefully select the accessories.

These include oval rings, ring suspension gears, sliding hooks, load hooks, WLL identification tags and many other components. From page 347

Special solutions: We make it possible

We advise you and provide you quickly and simply with tailor-made solutions to suit your specific application.

Flexible, fully-fledged single and multi-leg suspension gears with large working load limits made of cable-laid ropes by integrating thimbles with hooks and rings.

Integrated eyes for grommets

Integrated thimbles for grommets

Combined rope/chain suspension gear for particularly rough use

**Any questions?

**Working load limits apply only to
wire rope slings from PFEIFER**

Notice on safe use

Observe operating temperatures according to EN 13414

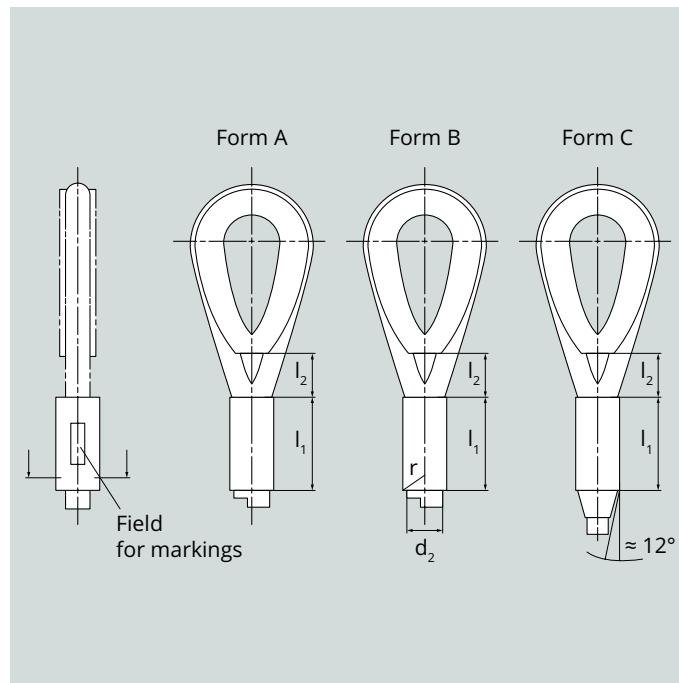

- -40 °C to 150 °C for ropes with steel core
- -40 °C to 100 °C for ropes with fibre core

Check ropes at the rope exit of the ferrule for wire breaks

Check the position of the dead rope end

- Form A and B: Closure with clamp edge or max. ½ Drope protrusion
- Form C: Dead rope end terminates with clamp (sight opening for checking)

Observe edge protection

The clamp must not rest on edges

(impermissible bending stress)

Use edge and abrasion protection systems,
especially for sharp edges! (see page 528)

Take advantage of our services!

We support you with inspections for the safety and discarding time of your attachment devices.

- Surface: galvanized
- Suspension: Flemish eye
- End fitting: Flemish eye
- WLL: 0,75 t to 18,5 t

Technical data

- **Operating temperature:** -40 °C to 150 °C = 100 % working load limit; 150 °C to 200 °C = 90 % working load limit; 200 °C to 300 °C = 75 % working load limit; 300 °C to 400 °C = 60 % working load limit
- **Standard:** DIN EN 13414-1
- **Identification mark:** Carrying capacity stamped onto ferrule

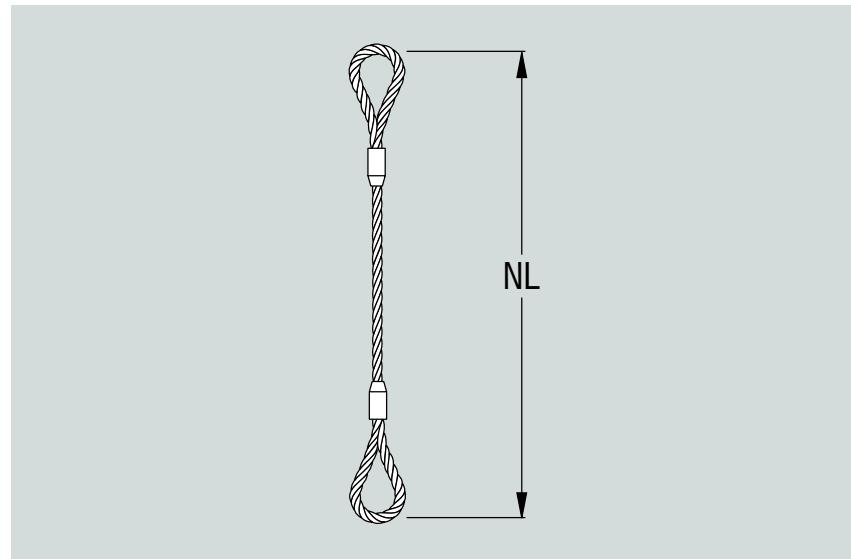

Wire rope sling

Single-leg wire rope sling with Flemish eyes and sturdy steel core for higher working load limits than wire rope slings of a standard design.

Conical ferrule protects against injuries.

100% working load limit also at temperatures up to 150 °C.

Galvanized version resists corrosion.

Rope balancing suspension gear

Balancing suspension gear for sharing loads evenly between lifting points.

Use individually or in pairs e.g., for transport and elevated rotation possible.

Easy extension by the use of chain suspension gear.

Application > 45° not permitted maximum crane speed 8 m/min!

WLL identification tag For wire rope slings

The WLL identification tag is required for marking of multi-leg wire rope sling gear in accordance with valid standards, but also of single leg wire rope slings, when the working load limit at the site is not evident.

The unlabelled design enables the retrofit of existing lifting gear and wire rope slings with the required details.

Type	Pfeifer single-leg	Pfeifer multi-leg	neutral
Weight approx.	kg	0,03	0,03
Reference no.	110196	110198	245047

Pfeifer type is not available as a spare part except in connection with wire rope slings purchased from and assembled at Pfeifer.

- Suspension: Eye
- End fitting: Eye
- WLL: 1,4 t to 7 t

Technical data

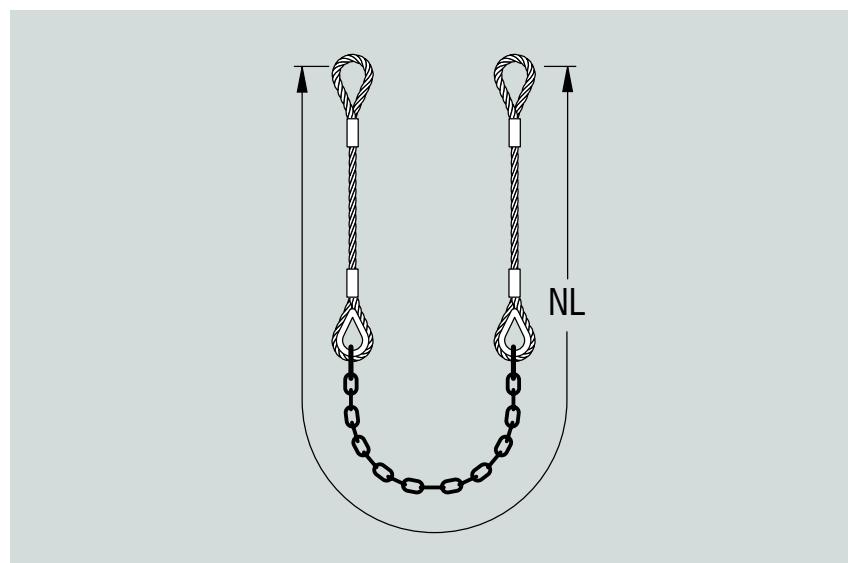

- **Operating temperature:** -40 °C to +100 °C
- **Standard:** Rope: similar to DIN EN 13414-1; Chain: DIN EN 818
- **Identification mark:** WLL identification tag

Combined rope/chain suspension gears

Wire rope sling combined with chain for particularly harsh applications.

The chain in the wear zone enables particularly long service life and reduces the effects of sharp edges.

The dimensionally stable rope enables the suspension gear to be pushed easily under the load.

Shackle

In attachment and lifting technology, shackles connect attachment devices or ropes with machines or components. In these professional applications, care must be taken to select high-quality shackles according to the corresponding standards, such as EN 13889.

Commercially available shackles are often unsuitable: they may only be used for fastening or tensioning.

Assortment overview

	Premium standard shackles according to EN 13889 GreenPIN	Shackle high-strength	Shackle similar to DIN 82101	Shackle Stainless steel similar to DIN 82102	Chain shackle

Standard/ Approval	<ul style="list-style-type: none"> • EN 13889 • US Fed. Spec. RR-C-271 • British Standard 3032 • Partly DNV-GL 	<ul style="list-style-type: none"> • Based on US Fed. Spec. RR-C-271 	<ul style="list-style-type: none"> • Based on DIN 82101 • Lower material class and consequently larger dimensions compared to high-strength shackles according to EN 13889 or US Fed. Spec. RR-C-271 • DIN 82101 with lower requirements than EN 13889 or US Fed. Spec. RR-C-271, such as no fatigue test required • No harmonised European standard 	<ul style="list-style-type: none"> • Based on DIN 82102 	<ul style="list-style-type: none"> • EN 1677

The following certificates are available on request for all shackles: CE / 2.1 / 2.2 / 3.1 and others

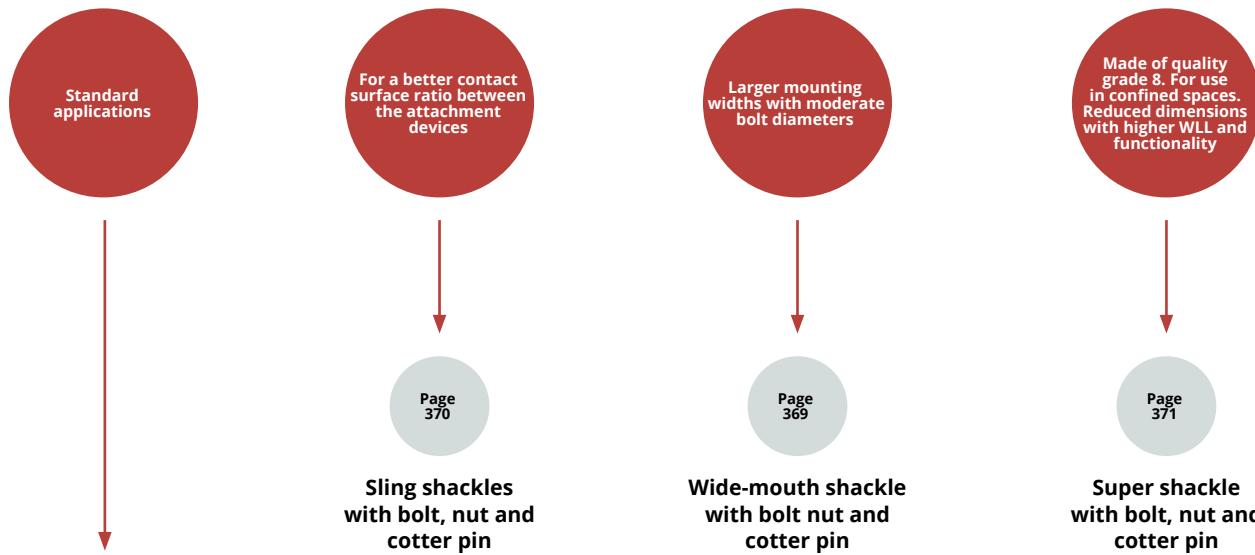

* The performance of shackles according to EN 13889 requires normal conditions. Exceptionally risky conditions such as offshore activities, the lifting of people and potentially dangerous loads such as liquid metals, corrosive materials or fissile materials are excluded.

In such cases, a specialist or, in the case of any product-influencing applications, the manufacturer must assess the degree of danger and adjust the working load limit (WLL) to the hazard.

Selection aid: Which shackle is the right one for my application?

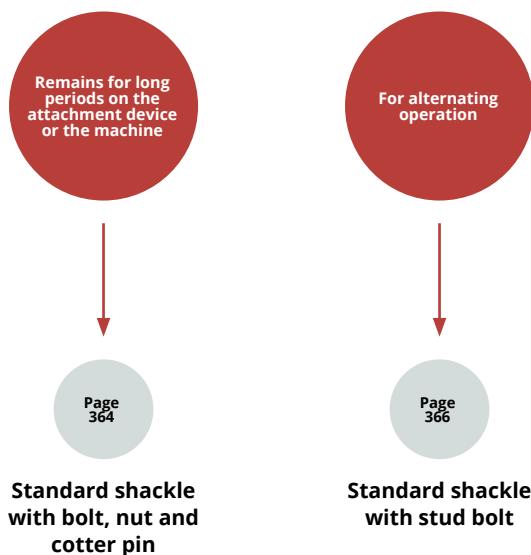

Question:

For which purpose is the shackle intended?

Question:

How long will the shackle remain on the load?

3D design data

The 3D data for the design can be found on the respective product page at www.pfeifer.info.

Marking of shackles

In the factory: Minimum marking according to standard

According to EN 13889, shackles must be marked by the production facility with:

- Working load limit (WLL) e.g. WLL 25 t
- Manufacturer's mark, e.g. name, logo or trademark of the manufacturer
- Traceability code e.g. batch number (HA with reference to a specific production lot)
- Quality grade (GK)
- CE conformity marking (Conformite European) CE

In order to be clear and durable, this marking must be deepened or raised by the manufacturing process (e.g. die forging)

Subsequently: Individual marking for simple checking and greater safety

The unique identification of a shackle with regard to the date of acquisition, area of application and test interval makes it easier for you to meet the requirements for operational safety, to avoid accidents and to understand them in an emergency. However, a number of provisions apply to the application of subsequent identification markings or symbols. They may only be applied by qualified persons.

The PFEIFER service does that for you!

We mark shackles with a working load limit of up to 35 t for you on our professional laser system.

We label shackles with larger tonnages with needle engravers in accordance with standards. Possible information is, for example:

- Serial number
- Company logo or company name
- Area or working group
- Assembly station
- Container number

We stand for good and durable legibility – even with the smallest lettering under 1 mm.

Notice on safe use

Check shackles each time before use

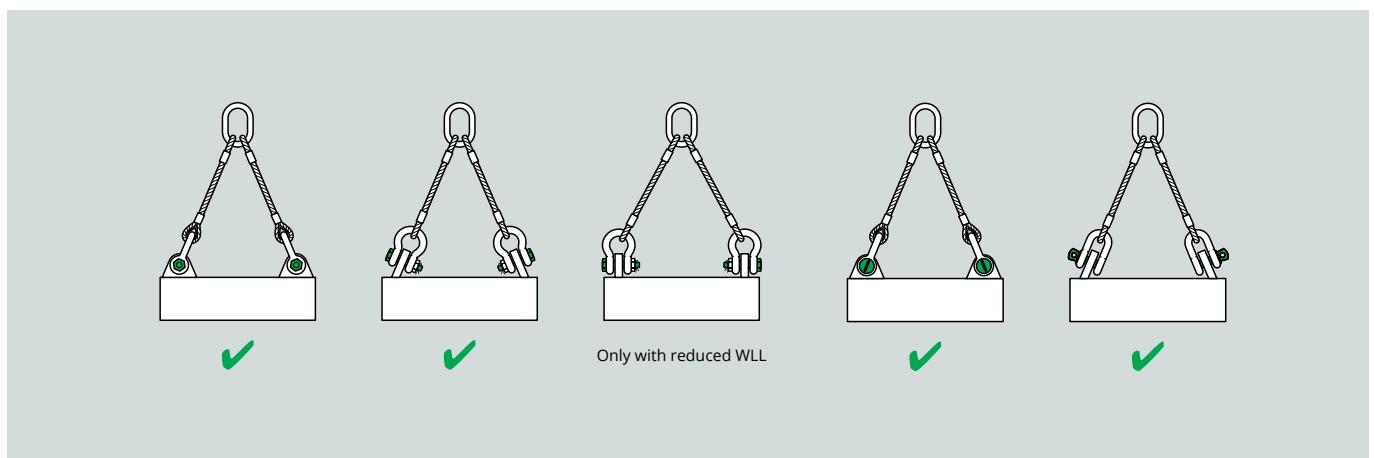

Are markings legible? Do the body and bolt fit together? For shackles with nut and cotter pin securing: is the cotter pin present and securely fixed? Are all parts of the shackle (thread, stirrup, bolt) not bent, worn or otherwise damaged?

Never rework shackles

Manipulations such as welding, heating or bending of the products have a negative effect on the working load limit (WLL).

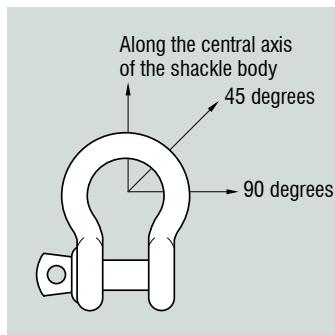

Mount bolt correctly

Tighten the shackle bolt hand-tight and then tighten it with a wrench or pliers so that the collar of the bolt lies flat against the shackle eye. The shackle bolt must be so long that the bolt can be screwed completely into the shackle eye.

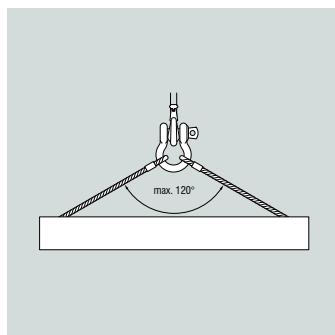

Avoid lateral loads

If lateral loads cannot be avoided, the working load limit of the shackle must be reduced!

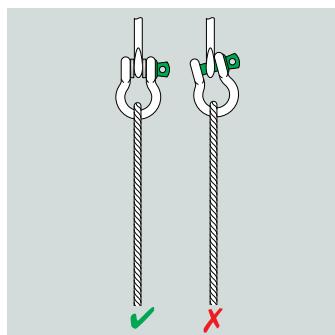

Example: Pull with deviation 45° from the central axis of the shackle body reduces the working load limit by at least 30 %. Pull with deviation 90° from the central axis of the shackle body reduces it by at least 50 %.

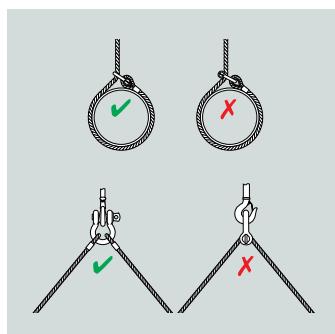

With two legs: use a curved shackle

A curved shackle must be used to connect two legs with the hook or flange of a lifting device. The legs of the suspension gear must be attached to the shackle body (stirrup) and the shackle bolt must be positioned in the hook (on the flange). The angle between the legs must not exceed a maximum of 120° (= lateral angle of inclination max 60°). With a symmetrically suspended load, the shackle can be loaded with the maximum specified WLL under these conditions.

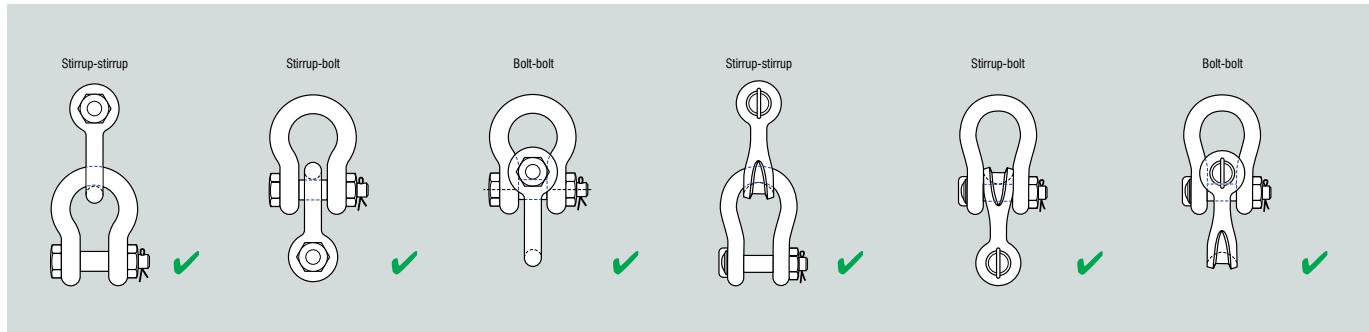

Avoid eccentric loading of the shackle

Insert loose intermediate pieces on both sides of the shackle bolt.
No welding of intermediate pieces or bending of the opening!

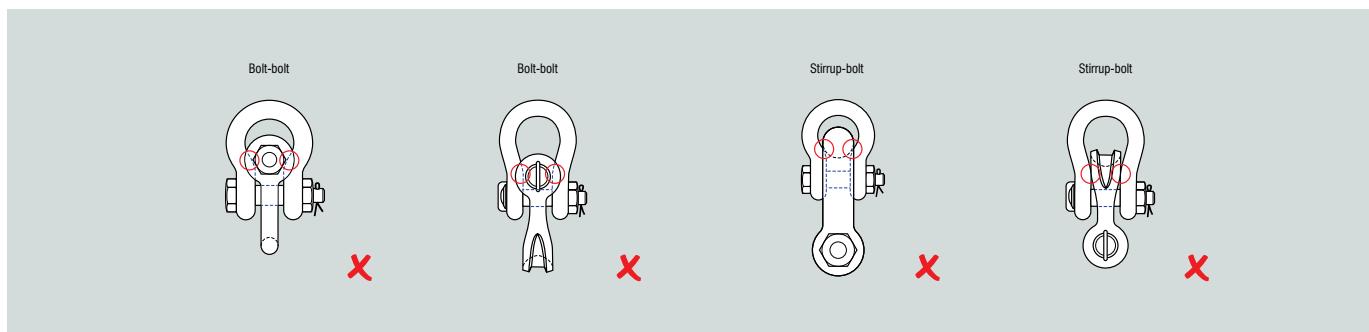

Avoid unscrewing of the shackle bolt

Avoid applications where the shackle bolt could rotate and unscrew due to movements (e.g. of the load or the rope). If a movement cannot be avoided, or if the shackle is to be installed for a lengthy period of time, or if maximum bolt security is required: use a design with safety bolt, nut and cotter pin.

Point load: pay attention to the size of the shackle stirrup

In the case of point loading of shackles in lifting procedures, the minimum diameter of the rounded component to be lifted must be greater than or equal to the diameter of the shackle stirrup.

Use shackle-shackle combinations correctly

Shackles can also be used together. An increase in the contact area through the use of larger diameters and/or stirrup fittings can be advantageous. In general:

The maximum load of the configuration is limited by the component with the lowest WLL ("weakest link in the chain"). For bolt-bolt combinations, the rule is: If the shackle eyes touch each other and the bolts therefore do not carry the full load, an impermissible spreading effect occurs on the contact surfaces shown here.

This configuration may not be used.

Observe national testing standards

Shackles must be regularly tested at least according to the standards of the country in which the products are used. This is necessary because, in use, the products can be deformed by wear, incorrect use, etc., which changes the material structure and thus the performance.

Take advantage of our services!

We support you with inspections for the safety and discarding time of your attachment devices.

Green Pin® sling shackle

Curved shackle with large contact surface, safety bolt, nut and cotter pin.

A larger stirrup radius improves the ratio of the radii between the attachment devices. This considerably extends the service life of the suspension gear.

Turnbuckles

Turnbuckles connect two rope end terminations and make it possible to increase or loosen the tension. Our turnbuckles are available in many executions.

Please note: Unless expressly mentioned, turnbuckles are not suitable for lifting loads, but only for fastening or tensioning.

► WLL: 0,54 t to 3,27 t

Technical data

- **Material:** high-strength
- **Surface:** galvanized
- **Safety factor:** 5
- **Standard:** similar to ASTM F1145-92 (formally U.S. Federal Specification FF-T-791b)

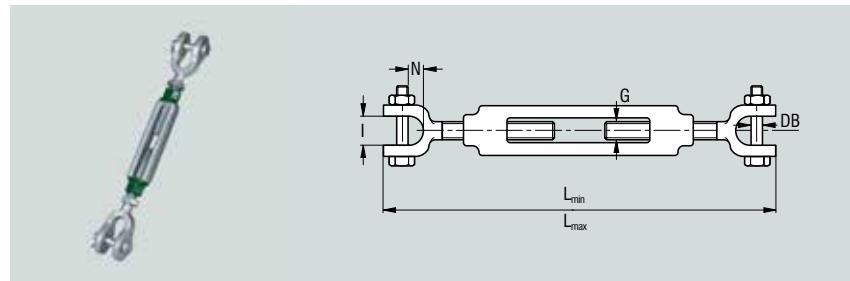

Options on request

- further sizes; Further versions; with stop collar

Green Pin® turnbuckles with 2 forks

Turnbuckle with two forks, designed for straight assembly for tensioning or lashing.

The turnbuckles are also suitable for lifting tasks.

DIN chains

Our DIN chains according to DIN 766, DIN 763 and 5685 are used for bracing, fastening, static suspension and hanging and closing off.

Please note that DIN chains are not suitable for attaching or lashing loads.

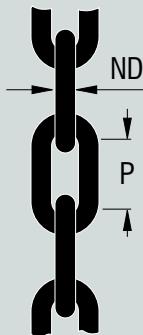

Please choose here from our chain slings (see page 69) or from our lashing chains ([see page 490](#)).

► Short link

► Standard: DIN 766

Technical data

► Chain surface: galvanized

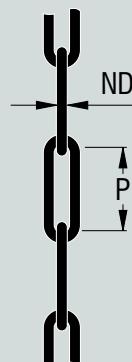

► Long link

► Standard: DIN 763

Technical data

► Chain surface: galvanized

Round steel chain

Tested short link round steel chain in true-to-gauge version.

CAUTION: Chains must not be used in chain slings.

Breaking force		kN	8	12,5	16	32	50
Nominal size of chain	ND	mm	4	5	6	8	10

A large red industrial hook and chain assembly is being used to lift a heavy object. The hook is attached to a thick black strap that is wrapped around a large metal drum. The background shows a workshop setting with a blue pegboard wall holding various tools like wrenches and pliers.

We move more for you.

Fast, simple, safe – our solutions for lifting and moving goods have been known for decades for their efficiency and reliability. To keep it that way, we are continuously developing our product range and our services. With comprehensive advice, seminars and customised special solutions.

Technical data

- **Overload protection:** Friction coupling
- **Operating temperature:** -20 °C to +40 °C
- **Overheating protection:** Temperature monitor for lifting motor
- **Control line:** Length corresponds to the chain length
- **Impact protector:** Limit position switch-off for limiting the highest and lowest load position
- **Operating voltage:** 400 V, 3 ph, 50 Hz
- **Insulation class:** F
- **Chain stores:** including
- **Protection class:** IP 55
- **Lifting method:** Coarse and fine stroke
- **Controller:** Contactor control 24V AC

Options on request

- Radio remote control incl. travel limit switch; in further lifting heights; Factory assembly by Pfeifer

Star-Speedline electric chain hoist with eye suspension

Electric chain hoist with eyelet suspension and standard heavy-duty limit shutdown (at 24 V AC) suitable for all standard applications. The final assembly is done by the customer on site. The power is supplied from the factory.

Technical data

- **Overload protection:** Friction coupling
- **Operating temperature:** -20 °C to +40 °C
- **Power supply:** Without mains cable
- **Overheating protection:** Temperature monitor for lifting motor
- **Control line:** Length corresponds to the chain length
- **Impact protector:** Limit position switch-off for limiting the highest and lowest load position
- **Operating voltage:** 400 V, 3 ph, 50 Hz
- **Insulation class:** F
- **Chain stores:** including
- **Protection class:** IP 55
- **Lifting method:** Coarse and fine stroke
- **Controller:** Contactor control 24V AC

Options on request

- Radio remote control incl. travel limit switch; in further lifting heights; Factory assembly by Pfeifer

Star-Speedline electric chain hoist with hook suspension

Electric chain hoist with non-rotatable hook suspension and standard heavy-duty limit position cut-off (at 24 V AC) suitable for all standard applications.

The final assembly is done by the customer on site.

The power is supplied from the factory.

Radio remote control for Star-Speedline electric chain hoist

Radio remote control for Star-Speedline electric chain hoist with and without running gear.

Range max	m	70
Battery lifetime (continuous operation)	h	30
Reference no.	383510	

- ▶ Suitable for load securing
- ▶ Socket body material:
Powder-coated sheet steel
- ▶ WLL: 0,25 t to 9 t

Technical data

- ▶ **Safety factor:** 4
- ▶ **Standard:** Hebezeug: DIN EN 13157;
Chain: EN 818-7
- ▶ **Operating temperature:** -25 °C to +40 °C;
reduced working load limit outside this range

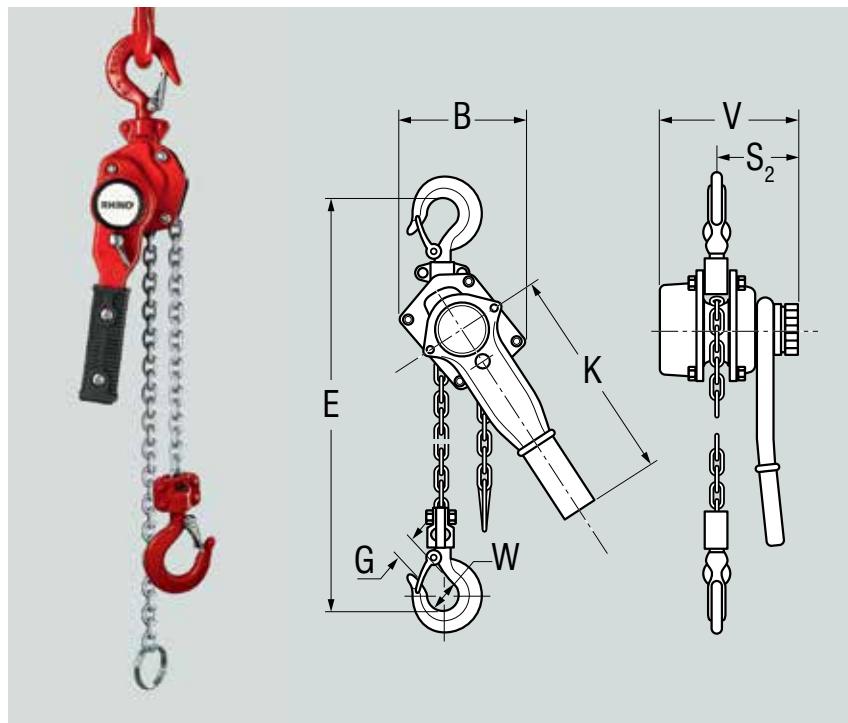

Options on request

- ▶ in further lifting heights; with friction coupling

RHINO – lever hoist

Lever hoist with sheet steel housing for moderate frequency of use.
Solid quality with a top price-performance ratio – 100% tested functionality by PFEIFER.

The lever hoist can also be used for secure cargo lashing

Lever hoist ERGO 360

Lever hoist with aluminium housing for frequent use.

The innovative and ergonomic handle enables fast crank movements and optimum power utilisation and thus more efficient, energy-saving work.

The lever hoist can also be used for secure cargo lashing

► **Socket body material:** malleable cast iron

► **WLL:** 0,75 t to 10 t

Technical data

► **Safety factor:** 4

► **Standard:** Hebezeug: DIN EN 13157;

Chain: EN 818-7

► **Operating temperature:** -10 °C to +50 °C; reduced working load capacities outside this range – before use at ambient temperatures < 0 °C, check if the brake is iced up by lifting and lowering a small load 2 – 3 times

Options on request

► in further lifting heights; with friction coupling; with chain sling; with roller chain (no twisting of the chain possible)

Lever hoist P85

Lever hoist with tempered cast iron housing protects against bending and twisting and is therefore suitable for extreme applications.

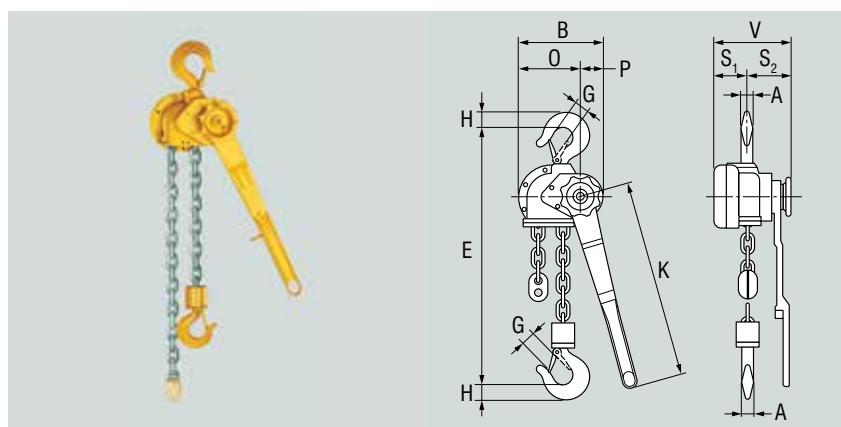

Due to the closed chain path, the lever hoist not susceptible to moisture and dust.

The self-locking, flat brake thread in a solid design protects against vibrations and oscillations.

Due to the forced switching "Lift-Lower-Free" no accidental switching is possible.

A high-quality European lifting chain according to DIN-EN is installed in the lever hoist.

The lever hoist can also be used for secure cargo lashing

LX-ALU mini pulley block

Lever hoist with aluminium housing for minor assembly and repair work, in particular for joining delicate parts together in confined spaces or changing working heights.

The little companion at work thanks to its practical dimensions and extremely light dead weight – ideal to carry along at all times. The lever hoist can also be used for secure cargo lashing

Lever hoist AL

Lever hoist with aluminium housing for occasional to frequent use, especially for every service car.

The light dead weight, the optimal lever ratio and the finely adjustable gearbox allow simple, fast and exact operation. Due to the closed chain path, the lever hoist not susceptible to moisture and dust.

A high-quality European lifting chain according to DIN-EN is installed in the lever hoist.

LB lever hoist

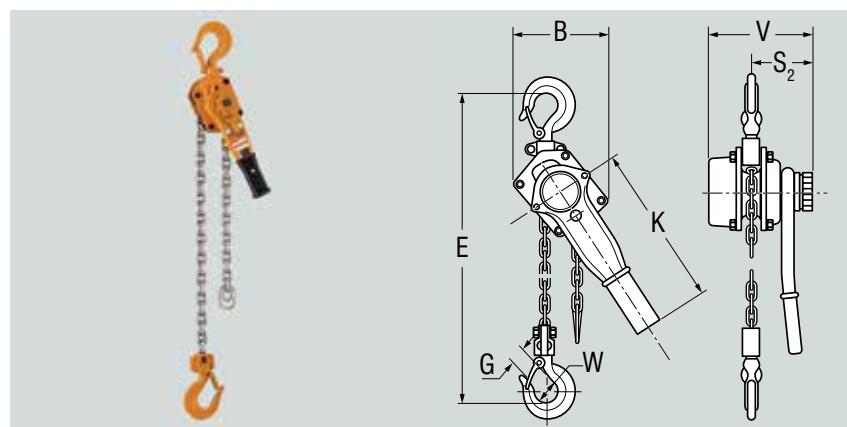

Lever hoist with sheet steel housing for occasional to frequent use with fine-toothed precision gearbox for less effort and sensitive positioning of the load.

The light dead weight, the optimal lever ratio and the finely adjustable gearbox allow simple, fast and exact operation.

The powder-coated housing and the coated intermediate plates provide conditional protection against corrosion.

The lever hoist has a unique double-secured chain freewheel, a low-wear high-performance load pressure brake and various overload protectors.

The lever hoist can also be used for secure cargo lashing

Chain bag for hoists

Chain bag with suspension to accommodate the excess hand and load chain.

Overall diameter	D	mm	200
Bag height	HS	mm	380
Reference no.			285442

- **Socket body material:** Sheet steel
- **WLL:** 0,25 t to 10 t

Technical data

- **Safety factor:** 4
- **Standard:** Hebezeug: DIN EN 13157;
Chain: EN 818-7
- **Operating temperature:** -25 °C to +40 °C
- **Chain surface:** galvanized

Options on request

- in further lifting heights; with friction coupling

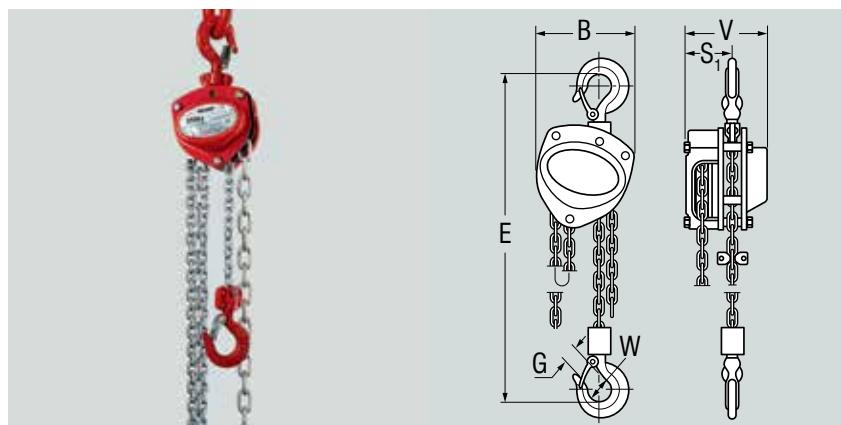

RHINO – hand chain block

Particularly smooth-running pulley block with sheet steel housing for moderate frequency of use.

Solid quality and a top price-performance ratio – 100% tested functionality from PFEIFER.

The powder-coated housing and the coated intermediate plates provide conditional protection against corrosion.

The standard length of the hand chain is equivalent to the lifting height.

CX-ALU mini pulley block

Pulley block with aluminium housing for minor applications, e.g. for the replacement of defective machine components or for stage construction.

The little companion at work thanks to its practical dimensions and extremely light dead weight – ideal to carry along at all times. Due to the closed chain path, the lever hoist not susceptible to moisture and dust.

The standard length of the hand chain is 2 m (type 250 kg) or 2.5 m (type 500 kg).

The lever hoist can also be used for secure cargo lashing

- Robust and durable
- WLL: 1,5 t to 10 t

Technical data

- Standard: DIN 7355
- Drive type: Rack and pinion winch

HIT steel winch Type 100

Steel winch in a robust, solid sheet steel design, with large, stable base plate for perfect stability and safety crank or ratchet safety crank.

It is driven by a rack and pinion made of specially hardened steel. The self-locking safety crank (360° crank movements) enables simple and safe positioning and holds the load securely in any position.

The ratchet safety crank (360° crank movements and pumping movements with a smaller radius) is ideal for confined spaces. Flexible in use through the use of the head or foot claw for lifting, lowering, holding or clamping machines and loads.

- Extended foot claw
- Large lifting height
- Made in Germany
- Optimised dead weight
- Particularly sturdy execution
- WLL: 5 t

Technical data

- Standard: DIN EN 1494
- Drive type: hydraulic

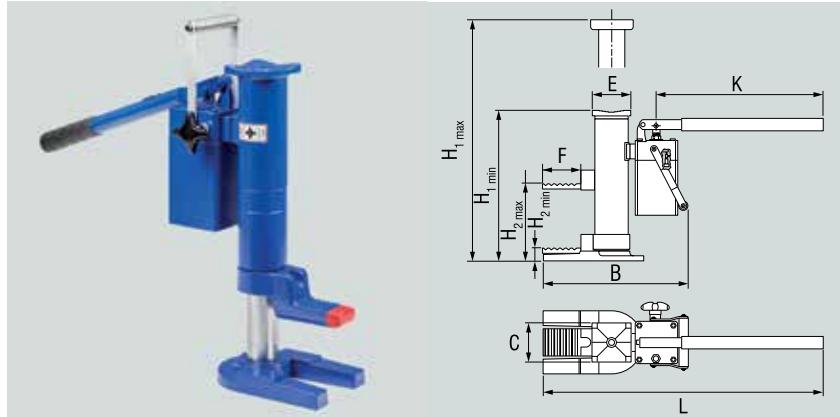

HIT-Hydraulic jack

High-quality hydraulic lifter with extended claw and spacer block, ideal for maintenance and assembly work – ideal also for frequent and demanding applications in vehicle construction.

The extended foot claw allows use even at hard-to-reach support points and prevents the load from slipping.

Thanks to its compact design and low weight, the hoist is ideal for ergonomic handling, simple transport and space-saving storage, making it perfect for taking along in service vehicles.

Due to its high-quality workmanship, the hoist is extremely sturdy and requires little maintenance.

- ▶ **Drive type:** hydraulic

Mini hydraulic jack

Mini hydraulic jack with removable hand lever (lever is moved horizontally) for lifting or lowering large machines in confined spaces.

Can also be used horizontally for spreading.

The precise release valve allows exact lowering.

The overload valve and the large stable base plate for high stability enable safe working.

The housing cannot be rotated.

Load lifting magnets

Permanent load-lifting magnets are used to lift and move ferromagnetic loads. Advantage: No fastening devices are required on the load or the workpiece. We offer you a specially selected range of lifting magnets and special models according to the EU Machinery Directive 2006/42/EC and EN 13155.

Selection aid: Which is the right magnet for my application?

Question:

Which loads are to be lifted?

Manual lifting magnets

- Magnetisation by hand lever
- Magnetic field permanently active, release by means of a push-off device

Permanent load-lifting magnet

- Magnetisation by hand lever
- Simple operation
- Short pick-up and unloading times
- High performance and compact dimensions

Electro permanent load-lifting magnets

- Magnetisation at the touch of a button in just 0.8 seconds
- Electrical control
- Operation without physical exertion even in hard-to-reach places (also controllable by remote control – delivery on request)
- Easy connection to mains voltage
- No susceptible and maintenance-intensive back-up battery required
- Load does not fall when power is interrupted – permanent magnet continues to hold the load

Standard applications	Electro permanent load-lifting magnet S	436
Sheet metals, laser and flame-cut parts, tools and cut blanks with an even or machined surface	Electro permanent load-lifting magnet U	437
Long, narrow loads, poor surfaces, pole extensions	Electro permanent load-lifting magnet L	438
Sheet metals, laser and flame-cut parts, tools and cut blanks with up to a medium air gap	Electro permanent load-lifting magnet P	439
Coarse sheet metals, solid steel, formed and forged parts – even with a large air gap	Electro permanent load-lifting magnet E	440

Quality magnets

All load-lifting magnets are manufactured in Germany according to strict quality criteria and impress with their reliability and easy maintenance and service.

- Up to 20% higher performance with the same weight & housing dimensions through optimised use of high-energy magnets
- Sturdy and low-maintenance design
- Low corrosion due to 100% nickel plating
- Low-wear due to solid one-piece magnetic shaft with dust-protected ball bearing
- Safety factor for some models above the required standard value (3.5 instead of the required 3)

Notice on safe use

There are a number of factors affecting the working load limit that need to be considered when making your selection. These include, for example:

- Uneven, rusty or dirty contact surfaces
- Load that is too long, too wide or too flexible
- Material that is too thin
- Unfavourable material composition (e.g. alloyed or hardened steels)
- Heated load (above 80 °C)

Special solutions: We make it possible

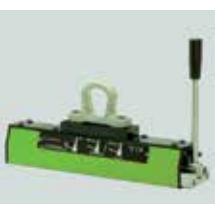

In addition, we also develop and manufacture tailor-made solutions.

- ▶ Up to 20% higher power compared to conventional models
- ▶ Robust and durable
- ▶ Safety factor: 3,5
- ▶ Standard: DIN EN 13155
- ▶ WLL: 0,15 t to 3 t

Technical data

- ▶ **Suspension:** Rigid attachment eye
- ▶ **Version:** Permanent load-lifting magnet
- ▶ **Operating temperature:** -10 °C to +80 °C
- ▶ **Magnet surface coating:** nickel-plated
- ▶ **Control lever:** backlash-free; self-braking

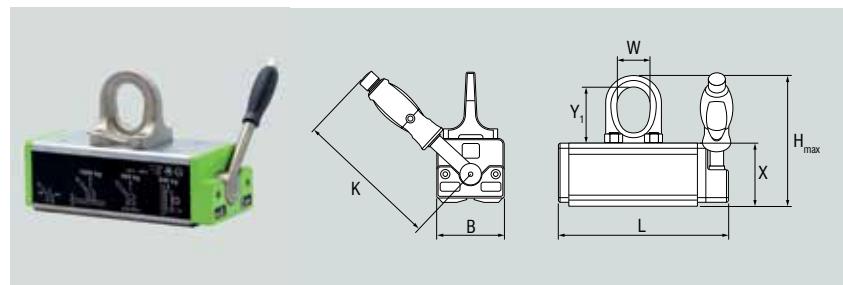

Options on request

- ▶ in special designs; with towing eye for vertical use

Permanent load-lifting magnet S

Innovative, powerful, robust and durable permanent load-lifting magnet with convincing results in all standard applications.

The non-recoiling, self-braking shift lever has an optimal shift travel of 90° (V-shift travel) and can therefore ideal for use even in confined spaces.

Permanent load-lifting magnet R

Innovative, powerful and robust permanent load-lifting magnet, which prevents the slipping of round materials due to the specially adapted shape of the magnet (deep and flat-angled prism of the pole shoes) and thus increases safety.

The non-recoiling, self-braking shift lever has an optimal shift travel of 90° (V-shift travel) and can therefore ideal for use even in confined spaces.

Permanent load-lifting magnet P

Innovative, powerful and robust permanent load-lifting magnet, which is particularly suitable for thin sheets and tubes (from 2 mm) due to the specially adapted magnet configuration in conjunction with deep and flat-angled prism pole shoes.

The non-recoiling, self-braking shift lever has an optimal shift travel of 90° (V-shift travel) and can therefore ideal for use even in confined spaces.

Permanent load-lifting magnet V

Innovative and powerful permanent load lifting magnet with maximum holding force and smooth single-hand switching for short pick-up and unloading times of workpieces.

Due to the new profile of the pole shoe, angle plates can be accommodated both externally and internally.

Vertical system LIFT

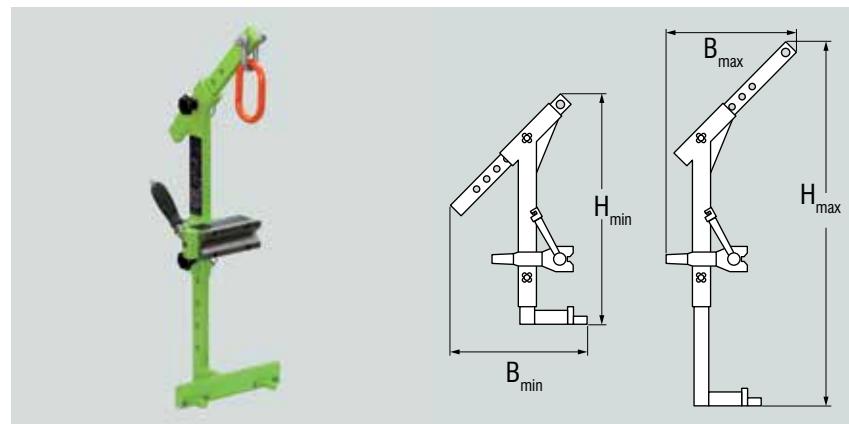

The practical aid for swivelling, moving and transporting materials
Suitable for moving loads from the horizontal to the vertical position and vice versa – especially for loads or workpieces without a pick-up device

Also suitable for vertical transport of materials and loading or unloading of machine tools

Ideal for the transport of round blanks.

The device can be used up to 20% of its working load limit even without the supports underneath.

Safe handling of workpieces is possible due to the variably adjustable centre of gravity and the adjustable overall height.

Load-lifting magnetic spreader beam

Comfortable handling, especially suitable for transporting long workpieces, such as at sheet metal processors as well as laser and flame cutters. The magnet cross bar also enables the safe, horizontal picking up of workpieces with a central cut-out. Magnets can be dismantled for individual use in order to be able to transport cut blanks and small sheets even without a cross bar. The locking device enables flexible settings.

- ▶ TML 500 with adjustable oil damper
- ▶ Safety factor: 3
- ▶ Standard: DIN EN 13155
- ▶ WLL: 0,1 t to 0,5 t

Technical data

- ▶ **Suspension:** 360° rotatable attachment point
– in the case of the TML 500 model additionally tiltable by 90°
- ▶ **Version:** Permanent load-lifting magnet
- ▶ **Operating temperature:** -10 °C to +60 °C
- ▶ **Magnet surface coating:** Titanium nitride coating
- ▶ **Control lever:** TML 500: adjustable oil damper for absorbing the recoil energy of the activation lever

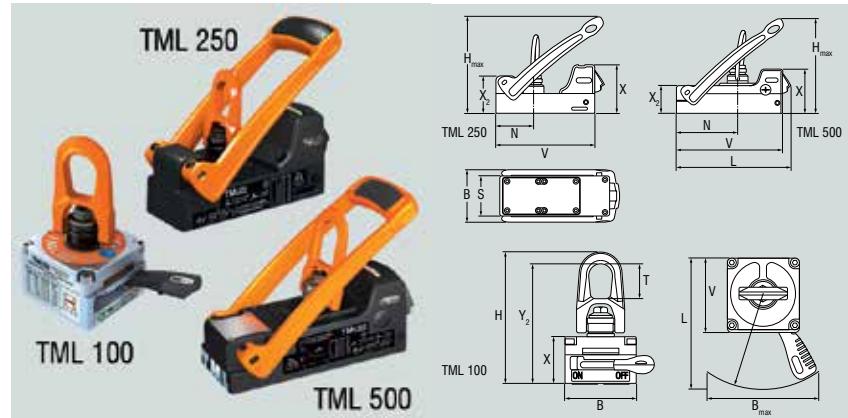

Permanent load-lifting magnet TML

Smart permanent load-lifting magnet especially for thin metal sheets (from 2 mm).

Due to its low dead weight and ergonomic activation lever, the magnet makes handling extremely easy.

The suspension is a 360° rotatable and the TML 500 model also has a 90° swivelling attachment point.

The TML 500 is equipped with an adjustable oil damper for absorbing the recoil energy of the activation lever.

- ▶ Safety factor: 3
- ▶ Standard: DIN EN 13155
- ▶ WLL: 1,6 t to 7,2 t

Technical data

- ▶ **Suspension:** Rigid attachment eye
- ▶ **Version:** Electro permanent load-lifting magnet
- ▶ **Operating temperature:** -10 °C to +80 °C
- ▶ **Magnet surface coating:** nickel-plated
- ▶ **Control lever:** Pushbutton control

Options on request

- ▶ with pick-up function for separating loads and/or checking sufficient holding force;
- ▶ with guide handle for precise guidance and positioning outside the danger area; in special designs; with spreader beam solutions;
- ▶ with radio remote control

Electro permanent load-lifting magnets Extreme

Innovative and powerful permanent load-lifting electromagnet especially for coarse sheet metals and solid steel, formed and forged parts – even with large air gaps.

Winches and rope hoists

Our winches and wire rope hoists comply with German Statutory Accident Insurance regulation DGUV 54 and the Machinery Directive 2006/42/EC. They are used horizontally and vertically and are particularly suitable where standard hoists cannot be used.

Selection aid: Which product is the right one for my application?

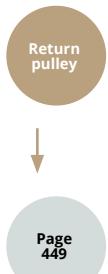

Question:

What application is needed?

Question:

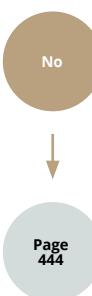

Are there any particularly difficult applications?

Question:

How is it operated?

Question:
Does it have to be possible to lift and lower in both directions?

TU rope hoist

Standard rope hoist

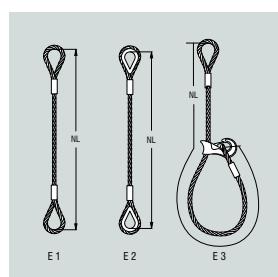

Rope pulleys

Wall mounted rope winch

G-smartrac® continuous winch with oscillating stroke

MINIFOR continuous winch

We also test and carefully select the accessories.

These include rope hoist and winch ropes.

- Oscillating stroke
- WLL: 0,12 t to 0,3 t

Technical data

► Operating voltage: 230 V AC/50 Hz

Options on request

- with safety load hook; with adapter for tow bar (except G-smartrac 300 vario); with equipment case; with rope bag; with return pulleys; with radio remote control; with kernmantle rope of any length

G-smartrac® continuous winch

Mobile continuous winch with innovative pendulum stroke, light-weight kernmantle rope and operating hour meter for material transport over any lifting heights or pulling lengths.

The oscillating stroke allows lifting and lowering in both directions and thus offers the opportunity for time-saving and economical work.

Operation with pendant control panel or radio remote control and stroke limitation in two directions by limit switches.

Scales

Dynamometers and crane scales enable load weights or tensile forces to be determined precisely.

Selection aid: Which weighing device is the right one for my application?

Question:

Which tensile force/load weight is to be determined?

- High accuracy
- Extreme range
- Long service life
- Very good against environmental influences
- Extensive range of function modes
- Vertical & horizontal use

- Easy weight determination of loads during production and shipping

Crane scales

Product	Special feature	Page
Compact Plus	Display	460
Multi	remotely readable	462

Question:

For which application do you need the device?

- Universal use
- Compact dimensions
- For extreme working load limits (up to 1500 t)

- For easy weighing or dynamic force monitoring

**Tensile force
measuring shackle
on request**

Dynamometers

- Remotely readable by wireless
- Acoustic warning signal in case of overload and tare function
- Certification: Calibration certificate included

► **Certification:** Calibration certificate included

Technical data

- **Operating temperature:** -10 °C to +50 °C
- **Protection class:** IP67
- **Battery type:** Standard AA battery
- **Battery lifetime (continuous operation):** 1200 h

Dynamometer Radiolink plus

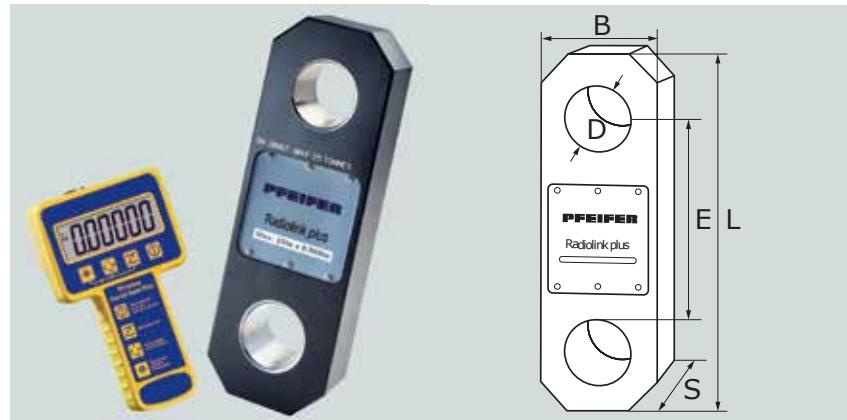

Remotely readable dynamometer for normal weighing or dynamic force monitoring.

Highest measuring accuracy +/-0.1% of the maximum measuring range thanks to high-quality aviation aluminium for constant measured values (standard unit of measurement t).

Including PW-HHP wireless remote read-out device with 6-digit LCD display and system range of 1000 m.

The measuring device has an acoustic warning signal in case of overload and a tare function.

Packed in a high-quality aluminium case or wooden box.
2-year manufacturer's warranty.

- Remotely readable by wire
- Acoustic warning signal in case of overload and tare function
- Certification: Calibration certificate included

► **Certification:** Calibration certificate included

Technical data

- **Operating temperature:** -10 °C to +50 °C
- **Protection class:** IP67
- **Battery type:** 9V block battery
- **Battery lifetime (continuous operation):**
80 h

Dynamometer Wirelink Plus

Dynamometer suitable for use as a crane scale or for measuring tensile forces.

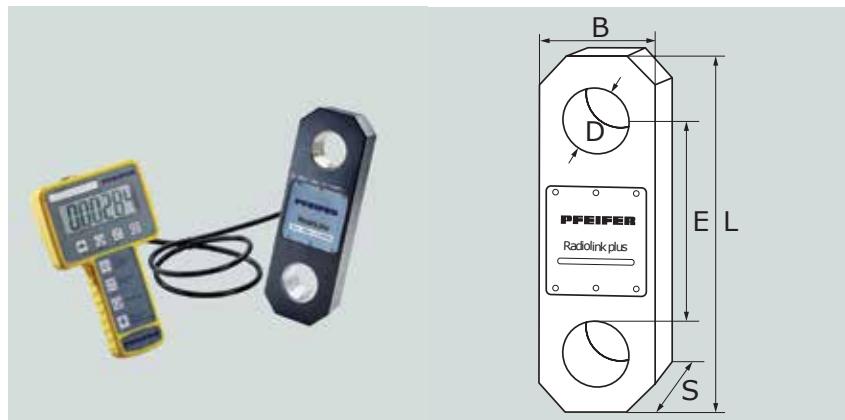

With wired remote reader with LCD display – system range depends on the cable length (10 m cable included).

Accuracy +/-0.1% of the maximum measuring range (standard units of measurement in kg, t, kN, lbs).

The measuring device has an acoustic warning signal in case of overload and a tare function.

Packed in a high-quality aluminium case.

2-year manufacturer's warranty.

Crane scales Multi

Reliable crane scale with LCD display for in-plant applications.
Accuracy 0.03% within the weighing range.

The moisture-protected keyboard has 4 buttons: ON/OFF, zero position/automatic TARE, F1 and F2.

Infrared remote control is configurable as a taring device or remote keyboard.

Delivery in practical transport case.

The shackles are already included when ordering the crane weigher.

Transport devices

Machines, devices and other loads up to 24 t can be moved internally with our transport devices. The range includes transport castors for different load dimensions and load weights.

A wide variety of transport tasks can be solved by individually assembling transport sets.

Notice on safe use

The carrying capacity specifications of the complete sets apply with optimal load distribution, i.e. taking into account the payloads of the individual castors.

- ▶ Robust and durable
- ▶ Service-friendly
- ▶ WLL: 6 t to 24 t

Technical data

- ▶ **Rolls material:** Polyurethane
- ▶ **Suspension:** With lifting eye from 12 t
- ▶ **Shaft surface:** galvanized
- ▶ **Load contact surface material:** Rubber (abrasion-resistant)

Transport trolley set

Transport trolley set for in-works transport including heavy-duty machine transport – on all floors thanks to high-quality heavy-duty polyurethane rollers.

The abrasion-resistant rubber surface provides for optimum holding of the load.

The transport trolleys can be combined. The lowest load capacity applies in each case.

The set consists of a transport trolley (distance adjustable) and a steerable transport trolley.

The load capacity specifications of the complete sets are valid with optimal load distribution, i.e. the permissible payloads of the individual rollers must be taken into account.

WLL	kg	6000	12000	18000	24000
Weight approx.	kg	24	70	90	105
Reference no.		274317	274318	274319	274320

The individual components – steerable transport trolley and adjustable transport trolley – are also individually available.

Replacement rollers with circlip* for transport trolleys

Replacement rollers with circlip*

Rollers material	Polyurethane
Rollers diameter	FLR mm
Rollers width	FB mm
Weight approx.	kg
Reference no.	275216

Tool hydraulics

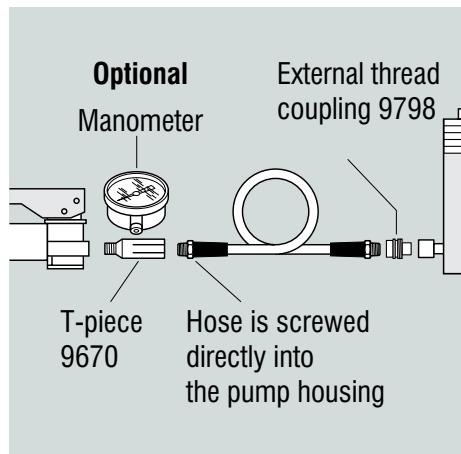

Machines or assemblies can be pulled, tensioned or lifted with our tool hydraulics.

We offer:

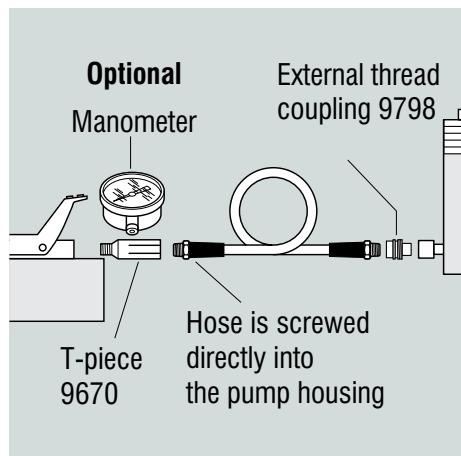

- Hydraulic cylinders for lifting, pulling or tensioning
- Standard, hand and foot pumps in single-stage and two-stage executions
- Hydraulic hoses for connection to hydraulic cylinders
- Pressure gauges for load and pressure indication
- Connection fittings

Note on the correct connection

How it works:

Connection of hand pump system. A T-piece is required for the pumps P12, P19, P23, P59 and P59F. All other pumps have a manometer connection.

Connection system with single-action pneumatic pump.

► WLL: 10 t to 50 t

Technical data

- **Piston rod surface:** hard-chrome plated
- **Thread size NPT:** 3/8

Options on request

- larger nominal loads; further lifting heights

► WLL: 10 t to 100 t

Technical data

- **Piston rod surface:** hard-chrome plated
- **Thread size NPT:** 3/8

Options on request

- larger nominal loads; further lifting heights

Hydraulic cylinder series RLS

The flat, single-action hydraulic cylinder without external thread is ideally suited for confined spaces, small profiles or frames and applications such as straightening, lifting and clamping, and in compact presses.

Quick retraction is possible due to the optimised return spring. The cylinder can be used with standard, hand and foot pump cylinders as well as lightweight pumps.

The plunger is exchangeable.

Type		RLS100	RLS200	RLS300	RLS500S

Weight approx.		kg	1,5	2,5	3,9	6,3
Reference no.			156023	156024	156025	156026

Series-RSS short-stroke hydraulic cylinder – single-action

The single-action hydraulic cylinder without external thread is ideally suited for confined spaces in combination with high nominal loads.

Quick retraction is possible due to the optimised return spring. The cylinder can be used with standard, hand and foot pump cylinders as well as lightweight pumps.

The plunger is exchangeable.

Type		RSS101	RSS202	RSS302	RSS502	RSS1002	
WLL	HL	t	10	20	30	50	100

Reference no.			156027	156028	156029	156030	156031

► Pneumatic or electric drive

Technical data

- **Operating voltage:** 230 V AC/50 Hz
- **Control line length:** 3,1 m
- **Thread size NPT:** 3/8

Options on request

- more pumps; Pumps driven by battery or rechargeable battery

Technical data

- **Thread size NPT:** 3/8

Options on request

- more pumps

Pneumatic and electric pumps for hydraulic cylinders

The single-action pump is suitable for series-C general-purpose cylinders, series-RH hollow piston cylinders, series-RLS flat cylinder and series-RSS short-stroke cylinders.

The pneumatic or electric drive offers enormous comfort when dealing frequently with hydraulics.

The required air pressure is 3 to 8 bar.

Type	PA6	PA462	PE172-E220
Drive type	Compressed air	Compressed air	electric
Oil requirement	cm ³	1,7	9,5
Usable volume oil	cm ³	1,6	9,4
Number of pressure levels	pcs	1	2
Control line length	m	3,1	3,1
Weight approx.	kg	6,3	27,2
Reference no.	155998	218335	156000

A hydraulic tube and a coupling half for connection to the cylinder are required for all pumps.

Standard, manual and foot pump cylinder

The single-action pump is suitable for series-C general-purpose cylinders, series-RH hollow piston cylinders, series-RLS flat cylinder and series-RSS short-stroke cylinders.

Type	P55	P19	P59	P59F	P159	P460
Oil requirement	cm ³	902	400	902	902	2491
Usable volume oil	cm ³	738	328	738	738	2245
Lever pressure	kg	66	45	66	55	64
Number of pressure levels	pcs	1	2	2	2	2
Volume/stroke low pressure stage	cm ³	2,6	5	10,9	9	42,6
Volume/stroke high pressure stage	cm ³	-	1,2	2,6	2,1	2,6
Weight approx.	kg	7,2	3	7,8	6,4	11,9
Reference no.	155975	155976	155977	218312	155978	155979

A hydraulic tube and a coupling half for connection to the cylinder are required for all pumps.

► Low leverage

Technical data

- Thread size NPT: 3/8"

Options on request

- more pumps

- Operating pressure: Bursting pressure = 700 bar; 2800 bar.

Technical data

- Material: Polyurethane
- Hose internal dia.: 6,4 mm

Options on request

- in other hose materials, e.g. rubber hoses or non-conductive hoses; with hosepipes with a larger diameter for faster oil return or faster lowering

Lightweight pump for hydraulic cylinders

The single-action pump is suitable for series-C general-purpose cylinders, series-RH hollow piston cylinders, series-RLS flat cylinder and series-RSS short-stroke cylinders.

Due to the low leverage and the lightweight construction, the handling is particularly easy.

Type	P19L	P59L
Oil requirement	cm ³	475
Usable volume oil	cm ³	443
Lever pressure	kg	37
Number of pressure levels	pcs	2
Volume/stroke low pressure stage	cm ³	4,1
Volume/stroke high pressure stage	cm ³	0,9
Weight approx.	kg	2,3
Reference no.	218310	218311

A hydraulic tube and a coupling half for connection to the cylinder are required for all pumps.

Hydraulic hose with coupling half

Highly stable hydraulic hose with external thread at both ends.

Type	9765E	9767E	9769E	9771E
Weight approx.	kg	0,34	0,88	1,08
Effective length (in metres)	m	0,6	-	-
Reference no.	156001	-	-	-
Effective length (in metres)	m	-	1,8	-

Effective length (in metres)	m	-	-	3,1
Reference no.	-	-	156003	-
Effective length (in metres)	m	-	-	6,1
Reference no.	-	-	-	156004

Technical data

► **Socket body material:** Steel (non-rusting)

Options on request

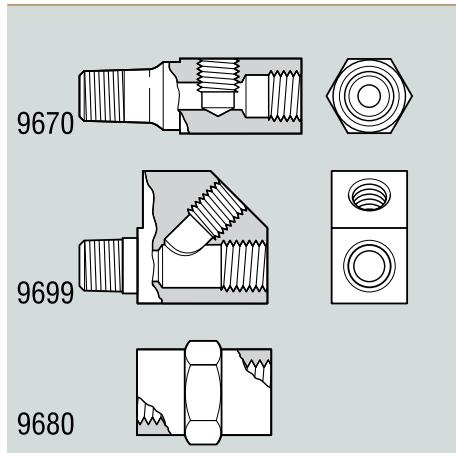

► with display in t; with 1/4" NPT connector

Manometer for load or pressure display

Display in bar for the tension or pressure with defined force for exact measurement of the load weight.
Connection by means of an adapter.

Type		9040E	9052E
Scale min	bar	20	10
Scale max	bar	100	100
Measuring range min	bar	0	0
Measuring range max	bar	690	690
Overall diameter	D	mm	63
Weight approx.	kg	0,234	0,25
Reference no.		160984	218319

Connection fittings for manometers

Connection valve for the integration of a pressure gauge into the hydraulics.

Type 9670: T-piece for mounting a pressure gauge between pump and hose coupling. Connectors with 1/4" and 3/8" NPTF internal thread and 3/8" NPTF external thread.

Type 9699: Pressure gauge connector with 3/8" NPTF external and internal thread and 1/4" NPTF internal thread at an angle of 45°.

Type 9680: Coupling with double-sided 3/8" NPTF internal thread.

Type	9670	9699	9680
Measuring range max	bar 700	700	700
Weight approx.	kg 0,05	0,05	0,05
Reference no.	218320	218321	218322

Technical data

► **Socket body material:** Steel (non-rusting)

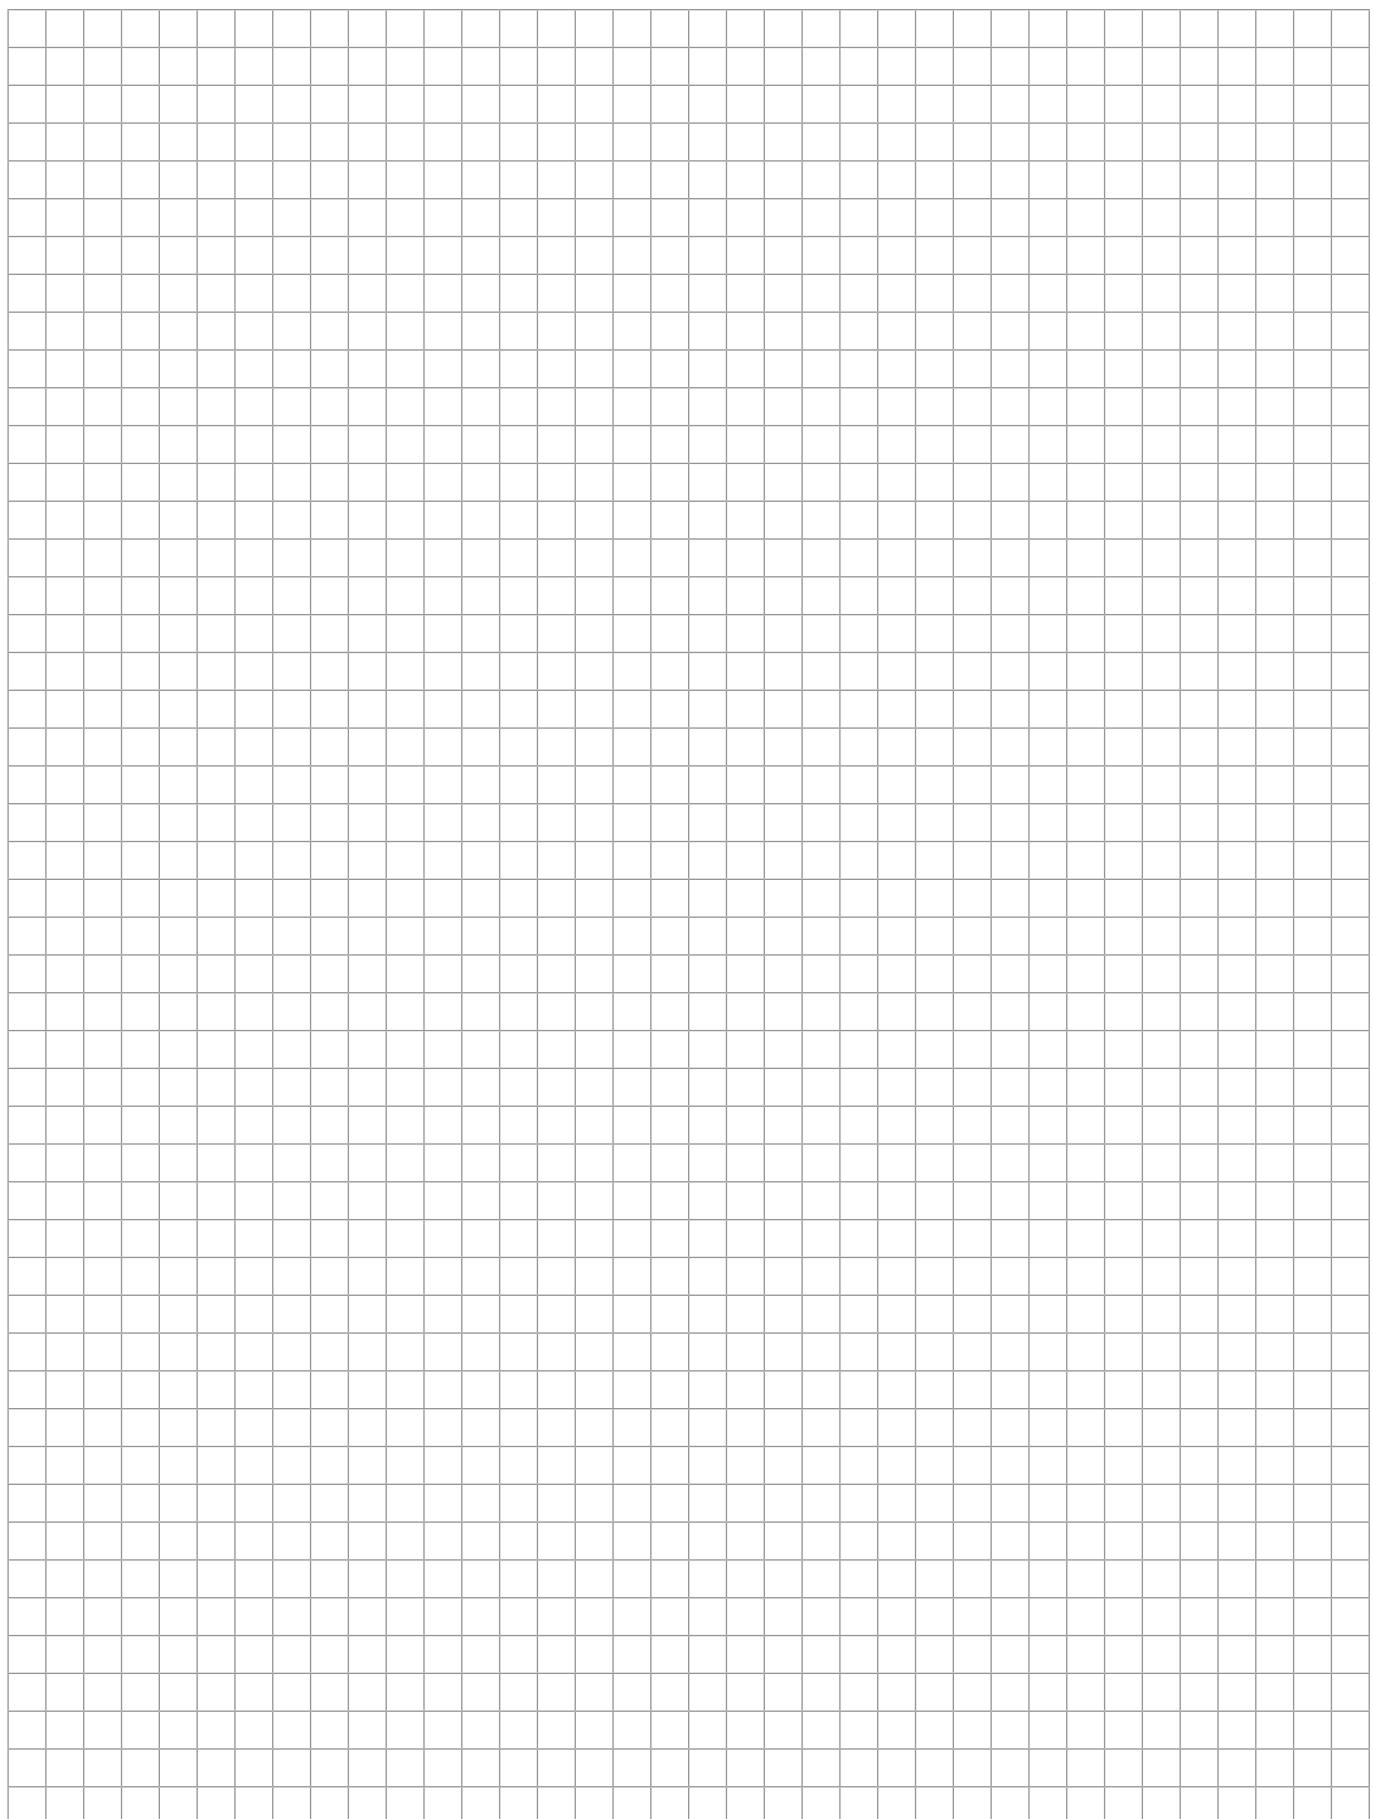

Hydraulic coupling half

Coupling half for high-pressure hydraulics for quick replacement of cylinders.

The integrated precision ball valve ensures optimal sealing when separating the coupling.

Connection by means of an adapter.

Type	9798
Measuring range min	bar 0
Measuring range max	bar 700
Weight approx.	kg 0,12
Reference no.	156005

Safe on the road. With intelligent solutions.

Wherever loads are transported, you are well advised with us. Discover our sophisticated product range for cargo lashing equipment and make use of the appropriate services from advice to specialist seminars.

Because safety comes first. With PFEIFER.

Cargo lashing equipment

Lashing equipment	474
Accessories for load securing	520

Responsibilities for load securing

Load securing is the responsibility of all those involved in the transport! That also includes load securing for in-plant transport. HINTS for those responsible:

- **Sender** Detailed loading instructions prevent ambiguities
- **Loaders:** Inspection of the vehicle to be loaded for apparent defects before the loading process (→ MUST be rejected in case of defects!), carrying out a departure check for sufficient load securing, documentation with pictures and a load securing record
- **Vehicle owners:** Performing and documenting regular inspections of vehicles and load securing aids
- **Planners** e.g. in the planning of concrete components
- **Haulage companies/vehicle driver:** Coordination of loading instructions with the loader

Incorrect or missing cargo lashing equipment leads to fines, points, criminal charges with fines/ imprisonment and/or prohibition of the onward journey in the event of accidents and inspections, depending on the extent!

Physical principles

With every change in speed and direction of a vehicle, forces occur that can cause the load to slip, roll, tip over or fall down.

- **Inertial forces** e.g. during braking (FT): press the load forwards, backwards or sideways, depending on the driving situation
- **Retention force/securing force (FS)**: must be applied by means of securing devices
- **Weight force (FG)**
- **Friction force (FR)**: acts between the load and the loading surface against the inertial force and is independent of the weight of the load and/or the size of the contact surface; coefficient of sliding friction results from the respective material pairing

Diagonal lashing: Lashing capacity LC

- Form-fit securing method
- Securing of the load through opposite-acting bracing
- Lashing straps are firmly attached to the load
- Lashing equipment is pre-tensioned with lower forces, since the securing forces of the lashing system only become active when horizontal forces act on the load, (driving around bends and braking).
- The higher the weight of the load, the higher the necessary lashing force of the lashing system!
- Lashing angle recommendation:
 - a: 30° to 75°
 - B: 10° to 60°

Lashing down: Pretensioning force (STF)

- Force-locked method
- The force in daN (approx. kg) that can be inducted into the lashing system by applying a force of 50 kg to the ratchet lever.
- Securing the load by pressing it onto the loading surface, so that the friction between the loading surface and the load is increased and independent movement of the load is no longer possible
- The higher the weight of the load, the more lashing straps have to be used.
- Systems with high STF reduce the required number of lashing straps – Saving costs and time
- Effect of lashing angle α on effective pre-tensioning force: The flatter the angle, the smaller the remaining effective pre-tensioning force

Lashing angle α	$\sin \alpha$	effective pre-tensioning force
90°	1,00	100 %
80°	0,98	98 %
70°	0,94	94 %
60°	0,87	87 %
50°	0,77	77 %
40°	0,64	64 %
30°	0,50	50 %
20°	0,34	34 %
10°	0,17	17 %

- Hint: Use of anti-slip underlays as a useful and economical addition as well as use of edge protectors to protect against sharp edges and distribute the pre-tensioning force on both sides of the load

Lashing straps

With our range of textile lashing straps according to EN 12195-2 you can achieve pre-tensioning forces of up to 660 daN when lashing down and up to 10000 daN lashing force when lashing diagonally.

Expertise in lashing straps

Push-ratchet: Tensioning element where the ratchet lever is moved in the direction of the loose end to apply the tension.

Pull-ratchet: Tensioning element where the ratchet lever is moved in the direction of the fixed end – i.e. the part of the strap that is firmly connected to the ratchet – to apply the tension. In most cases, a pull-ratchet has a longer ratchet lever and is therefore also referred to as a long-lever ratchet (LH). Due to the longer lever, it is easier to tension with higher force, so that up to a 100% larger pre-tensioning force can be achieved. When lashing cargo on trucks, where lashing straps are usually applied horizontally, a pulling movement is more advantageous to the user and less damaging to the health.

Clamping lock: Tensioning element made of cast metal or formed sheet steel for narrower lashing straps. The closure consists of a deflection bar and a knurled clamping jaw, which is pressed against the bar with a spring. The strap can be pulled through in one direction, while in the other direction it is blocked by the clamping jaw.

Lashing straps with clamping lock are particularly suitable for cargo lashing in cars, trailers or vans. Quickly and easy to handle, loads can be bundled or cartons can be fastened to a pallet for example.

Transport lock: available for many ratchet types; after tensioning the strap, the pawl is pulled and the ratchet is closed. The pawl now locks into place in the locking position and prevents the ratchet lever from opening during transport.

Selection aid: Which lashing strap is the right one for my application?

Question:

Which criteria do you use to choose your lashing strap?

By strap width		By lashing method			By ratchet type	
Width	Lashing down	Diagonal lashing		Type

See page 487 for lashing systems for internal lashing.

We also test and carefully select the accessories.

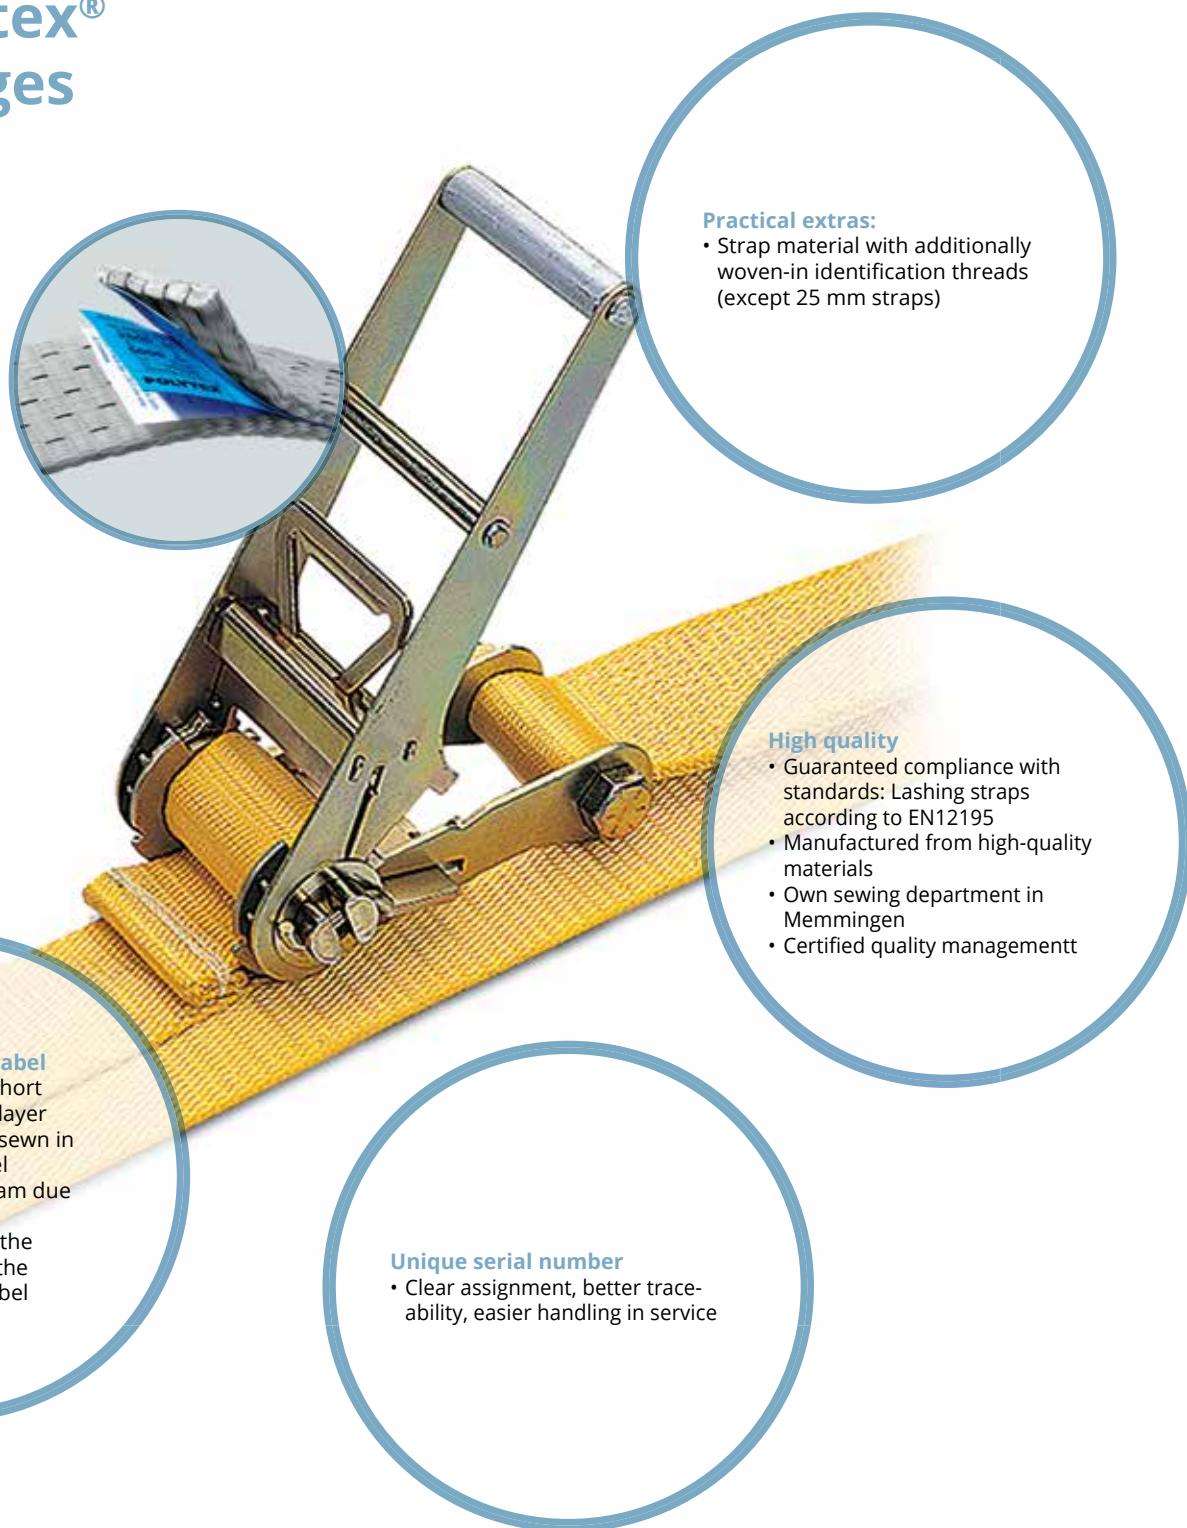

These include anti-slip underlays, edge protection systems, lashing points and recessed lashing rings, and the lashing strap winder.

From page 520

Known for quality: Polytex® lashing straps

The Polytex® advantages

With Polytex® Flip Label

- Tear-proof due to short design and double layer
- Safety instructions sewn in addition to the label
- Quiet in the airstream due to short design
- Marking option for the performed test on the carrying capacity label

Practical extras:

- Strap material with additionally woven-in identification threads (except 25 mm straps)

High quality

- Guaranteed compliance with standards: Lashing straps according to EN12195
- Manufactured from high-quality materials
- Own sewing department in Memmingen
- Certified quality management

Unique serial number

- Clear assignment, better traceability, easier handling in service

The PFEIFER quality promise:

We advise you with over 40 years of experience in the production and use of textile products for load securing. We manufacture in our own sewing department and test breaking forces, safety factors and elongation behaviour in our own test laboratory.

Special solutions: We make it possible

Can't find the right one in our range? Or would you like special markings or fittings? We advise you and manufacture high-quality lashing straps in custom lengths or other special versions in the shortest possible time.

Notice on safe use

Observe the regulations!

Load securing is indispensable! Everyone involved in the transport is responsible, including the driver and vehicle owner. The regulations for load securing also apply to in-plant transport!

Use anti-slip underlays

See page 520 for the assortment

Use edge protectors to protect against sharp edges

See page 526 for further information

Take advantage of our services!

We support you with inspections for the safety and discarding time of your attachment devices.

Special solutions: We make it possible

We advise you and manufacture tailor-made solutions for you.
Talk to us!

Examples:

RHINO lever hoist for heavy-duty lashing

Suitable for cargo lashing – identification according to DIN EN 12195-3 as standard

Lashing for paper rolls

Special lashing for the transport of paper rolls. The exterior roller is securely enclosed by a special version of a lashing strap and prevents the load from slipping or tipping over.

POLYTEX® VELCRO STRAPS

For the bundling and strapping of small, lightweight parts. Reusable due to the Velcro fastener.

- ▶ Double strap guide produces maximum tensile forces
- ▶ Performance class: Heavy-duty lashing system for diagonal lashing
- ▶ Type of ratchet: Heavy-duty push-ratchet
- ▶ Lashing force: 10000 daN

Technical data

- ▶ Standard: DIN EN 12195-2
- ▶ Operating temperature: -40 °C to +100 °C
- ▶ Webbing width: 75 mm
- ▶ Webbing colour: yellow
- ▶ Webbing material: Polyester
- ▶ Identification mark: Polytex® logo; Polytex® Flip Label

Options on request

- ▶ with individual imprint; further useful lengths

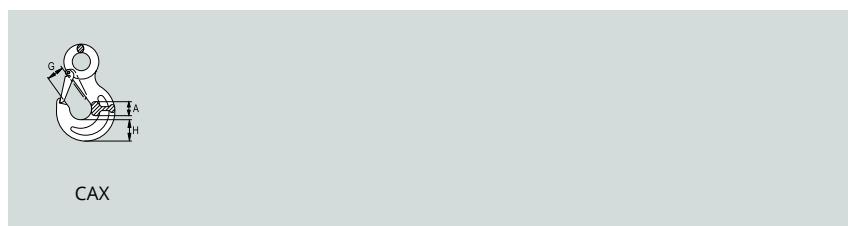

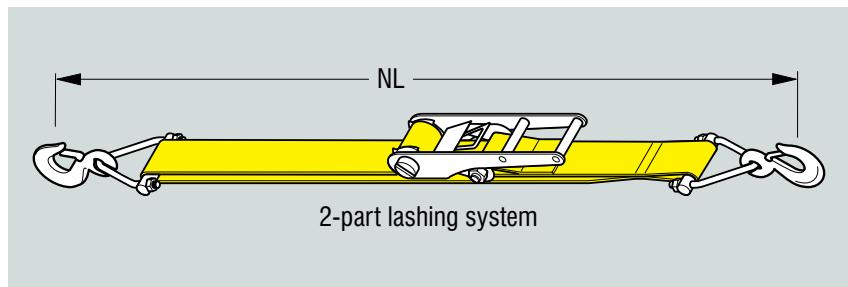

Application

Diagonal lashing

Polytex® lashing strap system RS-75 XL

Heavy-duty lashing system with push-ratchet and lashing force of 10000 daN for the highest requirements in the diagonal lashing, for example, of construction machines.

Lashing force direct LC		daN	10000
Hook type			Eye load hook

Application

Diagonal lashing

Tie-down lashing

Polytex® lashing strap system LH-ERGO PLUS

High-performance lashing strap system with pull-ratchet for 550 daN pre-tensioning force for efficient lashing.

The LH-ERGO PLUS pull-down ratchet long lever is actuated by pulling instead of pushing, which makes the pre-tensioning force easier to apply and thus protects the user's back.

- ▶ Webbing material: Polyester
- ▶ Identification mark: Polytex® Flip Label
- ▶ Manual force: 50 daN

Options on request

- ▶ with individual imprint; further useful lengths; further hook types; in a one-piece design

Application

Diagonal lashing

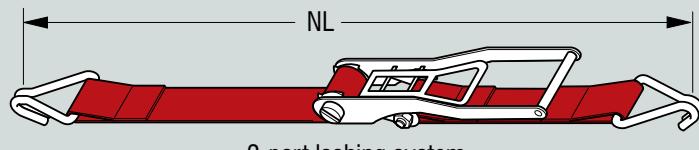

Tie-down lashing

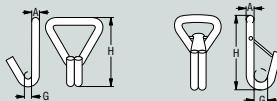

Polytex® lashing strap system LH-ERGO NZ

Lashing strap system designed for lashing down with pull-ratchet and special lashing strap for a pre-tensioning force of 660 daN and a lashing force of 1500 daN.

The LH-ERGO PLUS pull-down ratchet long lever is actuated by pulling instead of pushing, which makes the pre-tensioning force easier to apply and thus protects the user's back.

Application

Diagonal lashing

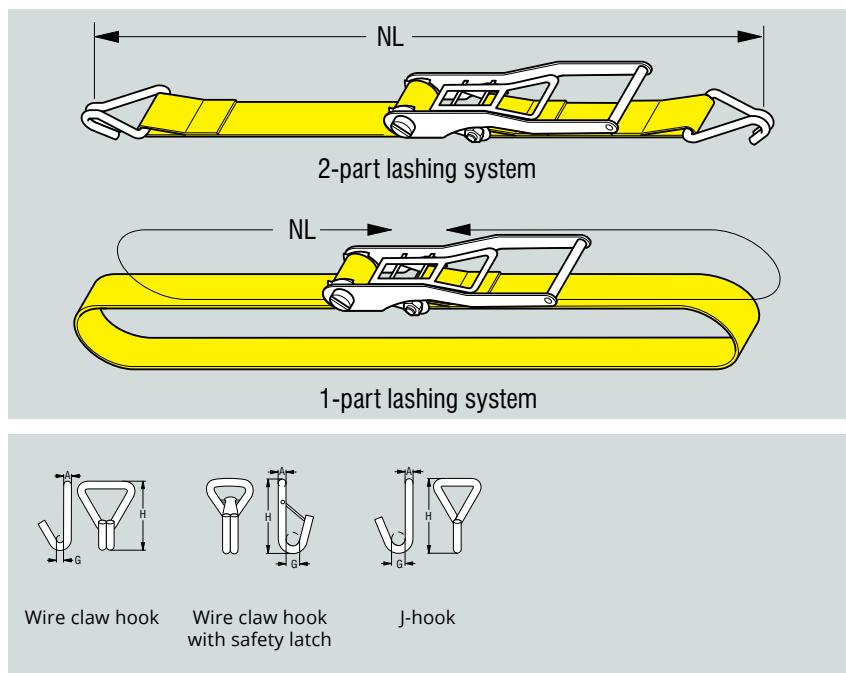

Tie-down lashing

Polytex® lashing strap system LH-ERGO ROBUST

Lashing strap system made of a sturdy, densely woven strap, special impregnation and reinforced edges for high abrasion resistance and long service life – with pull-down ratchet for 500 daN pre-tensioning force.

The LH-ERGO PLUS pull-down ratchet long lever is actuated by pulling instead of pushing, which makes the pre-tensioning force easier to apply and thus protects the user's back.

Polytex® lashing strap system for skips

Lashing strap system consisting of a lashing strap with reinforced, tapered end loop and wire claw hook for securing containers.

Lashing force	LC	daN	2500
Weight per first metre		kg	1,504
Weight per further meter		kg	0,128
Reference no.			146799

Lashing chain system for skips

Lashing chain system consisting of a chain with suspension ring plus hook and a ratchet load tensioner with grab hook for shortening for securing containers.

Lashing force	LC	daN	4000	6300
Nominal size of chain	ND	mm	8	10
Weight per first metre		kg	10,083	14,254
Effective length	NL	m	3	3
Reference no.			494349	494350

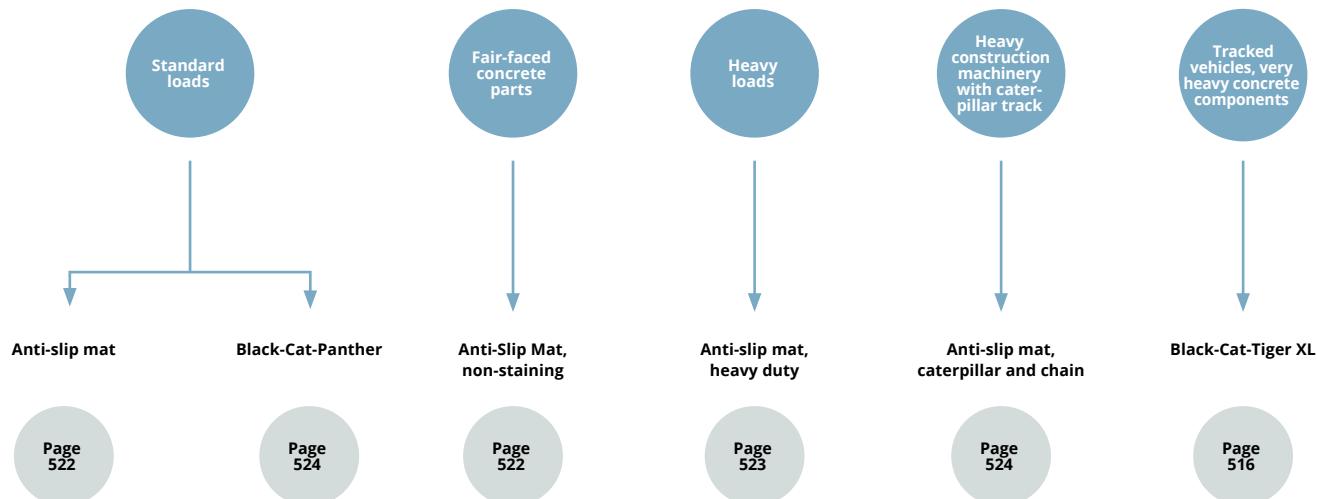

Anti-slip underlays

Anti-slip underlays increase the friction force between the load and the loading surface, thus reducing the amount of lashing equipment that has to be used. Our range offers solutions with extremely high friction coefficients for the heavy load sector, for fair-faced concrete, for caterpillar-track vehicles and much more.

Selection aid: Which underlay is the right one for my application?

Question:

Under which loads is it to be laid?

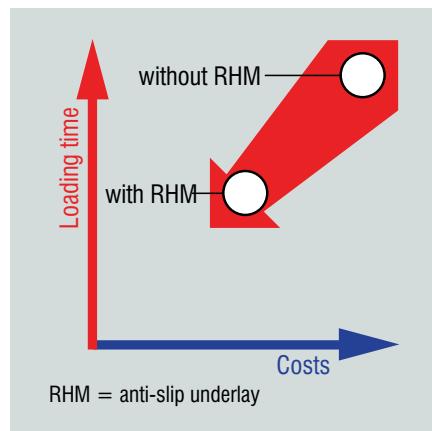

How anti-slip underlays save material and time

Anti-slip underlays significantly reduce the required pre-tensioning forces and thus also the number of lashing straps (here: example of lashing down).

Example: A 2,000 kg metal load is to be lashed free-standing on a loading surface with a screen floor and coefficient of sliding friction of about 0.2μ with a standard ratchet (50 mm) and a pre-tensioning force STF of 250 daN as well as a lashing angle α of 90° .

Without an anti-slip mat, 14 lashing straps are required

With an anti-slip mat, only two lashing straps are required

Notice on safe use

Check contact surfaces for cleanliness

Dirt, sand, water and especially lubricants reduce friction and adversely affect the securing effect!

Lay out anti-slip mats properly

- The cargo and loading surface must not touch each other
- Anti-slip underlays must be visible from the outside without lifting or moving the load.
- Also provide intermediate layers with anti-slip mats

Take additional measures to prevent slipping

- At least 2 items of lashing equipment per load unit.
- The contact between the friction partners must be maintained in every driving situation.
- If possible, load several pieces of cargo without gaps.

Check the deformability of the mesh

VDI 2700 sheet 15 demands a mat area that permits a max. deformation of 30% of the initial thickness.

Check anti-slip mats before, during and after use for obvious defects!

- ▶ Standard: VDI 2700 sheet 14
- ▶ Coefficient of sliding friction: μ 0.6 at a surface pressure of up to 250 t/m²
- ▶ Operating temperature: -40 °C to +120 °C

Options on request

- ▶ further dimensions and thicknesses; Technical data sheet for proof

- ▶ Standard: VDI 2700 sheet 14
- ▶ Coefficient of sliding friction: μ 0.9 at a surface pressure of up to 270 t/m²
- ▶ Operating temperature: -30 °C to +100 °C

Options on request

- ▶ Thicknesses from 3 mm to 10 mm

Anti-slip mat

Anti-slip mat with a guaranteed sliding coefficient of friction of $\mu = 0.6$.

The use of this mat significantly reduces the number of lashing straps required when lashing down.

Due to the material thickness, a longer service life is achieved than with thin mats.

Overall width	B	mm	250	100	100
Material size		mm	8	8	10
Overall length	L	mm	5000	200	200

Reference no.			281763

- ▶ Robust and durable
- ▶ Standard: VDI 2700 sheet 14
- ▶ Coefficient of sliding friction: $\mu 0.9$ with material pairing wooden pallet/loading surface; $\mu 0.7$ with material pairing steel/loading area
- ▶ Surface pressure: 1500 t/m²

- ▶ Standard: VDI 2700 sheet 14
- ▶ Coefficient of sliding friction: $\mu 0.64$ dry in the running direction of the chain; $\mu 0.62$ dry transverse to the running direction of the chain; $\mu 0.51$ wet in the running direction of the chain; $\mu 0.4$ wet transverse to the running direction of the chain
- ▶ Surface pressure: 579 t/m²

Anti-slip mat heavy-duty

This anti-slip mat has an extremely high load capacity of up to 1500 t/m² and is therefore particularly suitable for heavy-duty transport and heavy loads.

The mat is particularly sturdy and durable due to a 3 mm thick wear protection layer.

Overall width	B	mm	800
Material size		mm	13
Overall length	L	mm	1200
Format			Mesh
Packing quantity			1 Pk
Weight approx.		kg	15
Reference no.			255720

Anti-slip mat Caterpillar and chain

Anti-slip mat is suitable for heavy construction machines with crawler tracks and weights of up to 85 t.

If a cutting to size should be necessary, this can be done with a circular saw or jigsaw.

Overall width	B	mm	800
Material size		mm	24
Overall length	L	mm	1200
Format			Mesh
Packing quantity			1 Pk
Weight approx.		kg	24,5
Reference no.			255721

- ▶ Extremely stable – even after being driven over several times by caterpillar track vehicles
- ▶ For load use up to 250 t/m²
- ▶ Ideal for the transport of caterpillar track vehicles, very heavy concrete components, tanks and for special transport

Anti-slip mat Black-Cat-Tiger

The almost indestructible top product for the highest transport safety and demanding requirements. Extremely robust with a load capacity of several tonnes due to the 4-ply fabric insert in the special rubber mat.

Overall width	B	mm	400
Material size		mm	6
Overall length	L	mm	4000
Format			Roll
Packing quantity			NaN
Weight approx.		kg	9,6
Reference no.			274727

- ▶ Extremely tear-resistant
- ▶ Easy handling thanks to low weight
- ▶ Coefficient of sliding friction:
 μ 0.94 at a surface pressure of up to 10 t/m²; μ 0.55 at a maximum surface pressure of up to 82.5 t/m²
- ▶ Operating temperature:
-40 °C to +120 °C

Options on request

- ▶ Design as edge protection pad with insertable belt glider

Anti-slip mat Black-Cat-Panther

Due to its closed surface, the anti-slip mat is washable and food-safe according to law, and therefore suitable for universal use in transport, logistics, industry and manual trades.

Due to an additional fabric insert the mat is particularly tear-resistant, but remains flexible, easy to roll and easy to cut.

Overall width	B	mm	120	200	600	800
Material size		mm	4,5	4,5	4,5	4,5

Edge protection systems

Edge protectors protect the load, extend the service life of lashing straps and are even mandatory for sharp edges.

Selection aid: Which edge protection is the right one for my application?

Question:

What is to be protected?

Our recommendation::

Edge protection profile, black

Page 529

Our recommendation:

Polytex®
Flexoclip S

Notice on safe use:

Sharp edges must be secured by edge protection systems!

An edge is considered to be sharp if the edge radius R of the load is smaller than the thickness of the lashing strap.

Abrasion protection and fire hoses are not edge protection!!

Edge protection profile Lashing chains

The edge protection profile made of metal protects the lashing chain from sharp edges, ensures even force distribution and thus prevents damage to the load.

for nominal size of chain min	mm	6
for nominal size of chain max	mm	13
Weight approx.	kg	0,5
Reference no.		281760

- ▶ High form elasticity
- ▶ Enlarged contact surface for optimal pressure distribution

Technical data

- ▶ **Material:** Polyethylene
- ▶ **Material size:** 19 mm
- ▶ **Leg length:** 190 mm

Double bridge edge protection rail

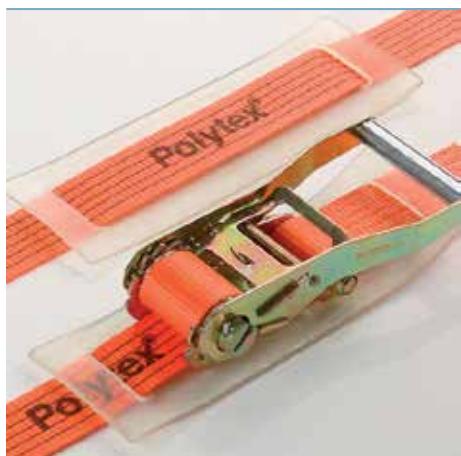

Edge protection rail for lashing of several individual load parts together for uniform force distribution to protect the lashing strap against damage by sharp edges.

The inner air gap in the edge protection profile protects the edge of the load, while the rounded profile protects the strap and increases the sliding capability of the straps, resulting in better transmission of the pre-tensioning force.

Overall length	L	mm	400	800	1200
Weight approx.		kg	0,82	1,71	2,56
Reference no.			240219	240220	240221

Options on request

► further sizes

Edge protection plate and ratchet underlay

Sturdy polyurethane plate protects lashing strap and load by preventing direct contact of the ratchet with the component.

for harness strap width max	mm	50
Weight approx.	kg	1,6
Reference no.		208391

Edge protection profile black

The edge protection profile is made of shatterproof plastic. The short leg is slightly curved for optimal adaptation to a paper roll.

The strap is securely fixed by the formed lateral guide. The inner air gap in the corner of the profile protects the edge of the load, while the raised side parts keep the strap away from the load.

for harness strap width max	mm	50
Weight approx.	kg	0,28
Reference no.		187347

Edge protection profile Plastic

Particularly stable edge protection profile with slot for feeding the strap through for even and gentle pressure distribution.

for harness strap width max	mm	100
Weight approx.	kg	0,9
Reference no.	208390	

Packing unit 10 pieces
Minimum purchase quantity 1 carton (60 pieces)

Edge protection profile steel

Edge protection profile with slot for feeding the strap through for the protection of lashing strap and transported goods.

for harness strap width max	mm	50
Weight approx.	kg	3,8
Reference no.	208389	

Packing unit 10 pieces

- ▶ Standard: DIN EN 12195-1;
DIN EN 12640
- ▶ Operating temperature:

Spanngurfix lashing strap winder

Lashing strap winder with integrated winding and holding device for 50 mm lashing straps.

Lashing strap fix can be retrofitted to any 50 mm lashing strap up to 12 m in length and is suitable for left and right-handers.

The lashing strap winder made of high-strength plastic is particularly sturdy, durable and light.

Weight approx.	kg	0,165
Reference no.		266614

A large industrial crane is shown lifting a massive cylindrical metal tank. The tank is suspended by several red cables and hooks. In the foreground, two workers wearing hard hats and dark uniforms stand on a metal platform, watching the operation. The background shows a clear blue sky and some industrial structures. Two white circles are overlaid on the image: one highlighting the lifting hook area and another highlighting the side of the tank.

Lift and turn as you like

Maximum safety meets long service life:
Our range for professional lifting and turning
of loads naturally complies with all applicable
laws and guidelines. You can only expect
more from our service. Let us advise you!

Lifting and turning devices

Turning devices	538
Spreader beams	541
Lifting clamps	551
Grabs	567
Drum handling devices	577

Turnover devices

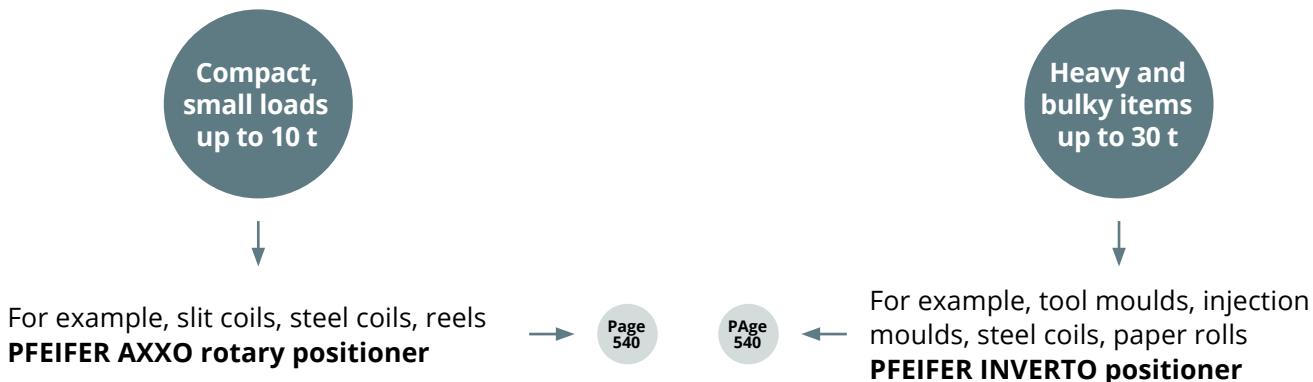

Our turnover devices simplify the turning of loads. Safely, simply and without a crane.

Turnover devices from PFEIFER meet the highest quality standards: We have the welding certificate EN 1090 – EXC 3 and decades of experience in production. Our welders are tested according to EN DIN 287. Only sheet metals with 3.1 B certificates are processed.

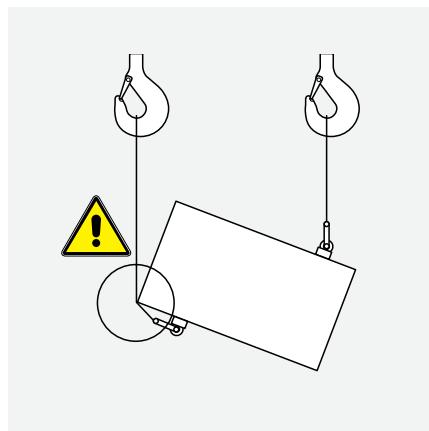

Selection aid: Which device is the right one for my application?

Question:

What loads are to be turned over?

Notice on safe use

Loops and chains that often damage the sensitive load edges ...

... as well as sometimes adventurous and dangerous methods for turning the load become superfluous!

Turn large and bulky loads over quickly and safely without a crane!

Spreader beams

Spreader beams are indispensable load lifting attachments. Our spreader beams are designed according to DIN 13155 for 20,000 load changes and manufactured according to the highest quality requirements. We meet the necessary welding requirements according to EN ISO 3834-2 and have the welding certificate according to EN 1090-2 up to execution class EXC 3..

Selection aid: Which spreader beam is the right one for my application?

Question:

Is the load picked up by fork-lift truck or crane hook?

Question:

How is the load picked up?

New
**Adjustable
spreader beam**

Notice on safe use

Read the operating instructions before using the spreader beam!

Observe the temperature range

Do not use at ambient and load temperatures below -20 °C or above +100 °C.

Pay attention to even loading!

In case of uneven loading, the entire "spreader beam/load" system can hang at an angle.

According to EN 13155, the angle of inclination must not exceed 6°.

Suspend the spreader beam vertically above the centre of gravity of the load!

Loads with an eccentric centre of gravity require eccentric suspension or asynchronously adjustable and unevenly loadable attachment points.

Pay attention to the height of the centre of gravity of the load!

The system will usually be stable if it is lower than the attachment points. If it is higher, it is imperative to pay attention to the right combination of "attachment method/design of the spreader beam".

Attach the load correctly!

There are many factors to consider when attaching with ropes, chains and round suspension gear.

Match the sizes of the suspension and crane hook to each other!

Crane hook too small > spreader beam starts to swing.

Crane hook too large > not permitted.

The suspension must be freely movable and stable in the crane hook.

Check the carrying capacity of the crane!

The carrying capacity of the crane is reduced by the dead weight of the spreader beam.

No 10-tonne crane can use a 10-tonne spreader beam under full load.

Safe load transport with spreader beams is an interaction of attachment points, load centres of gravity and crane hooks. We'll be glad to advise you!

Take advantage of our services!

We support you with inspections for the safety and discarding time of your attachment devices.

- ▶ Safety swivel eye can be rotated under load
- ▶ Integrated protection against slipping off the tine
- ▶ sturdy profile steel construction in compact lightweight design with welded tine recess

Adapter for fork lift prong

Adapter for fork lift prong for direct attachment to one fork prong.
Load attachment by load hook.

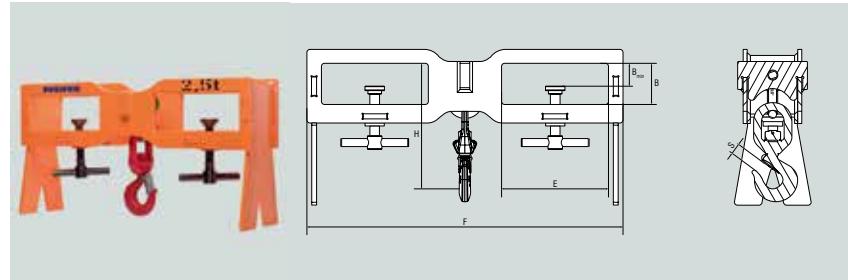

SWL max		kg	1000	2000	3000
Weight approx.		kg	4,1	6,7	10,6
Construction height	H	mm	190	250	285
Prong gap inner height	B	mm	50	60	80
Prong gap internal width	E	mm	115	133	173
Opening width load hook	S	mm	20	23	27
Reference no.			181062	181063	181064

- ▶ Sling hook with safety latch and pivoting eye (not under load)
- ▶ Integrated protection against slipping off the tine
- ▶ Can be picked up by fork-lift truck

Spreader beam for fork lift applications

Spreader beam for fork lift applications for direct attachment to the fork lifter.

Load suspension via central, swivel-eye, safety load hook (not swivelling under load), optionally available with ball-bearing safety load hook for swivelling under load (extra charge!).

SWL max	kg	1000	2500	6000	10000
Weight approx.	kg	13,5	22	38	59,5
Overall length	F mm	593	653	700	730
Construction height	H mm	203	258	265	318

Prong gap internal width	E mm	180	220	240	240
Opening width load hook	S mm	20	23	43	53
Reference no.		439564	429308	439673	440160

► Extreme sturdy

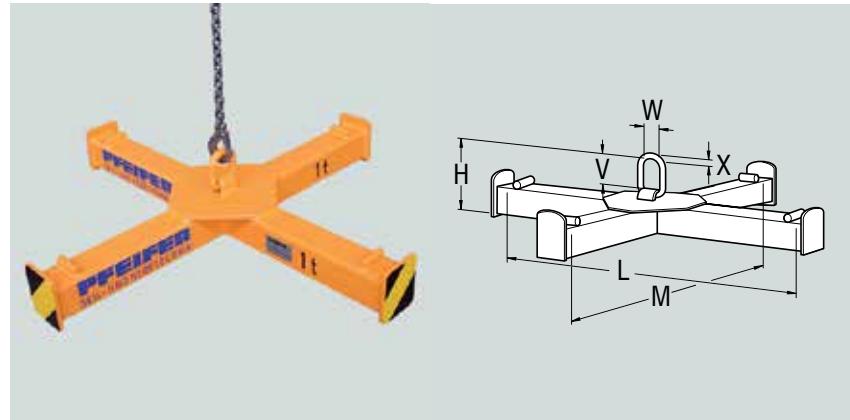

Options

► **Additional options:** Decide on your own – we accommodate and supply solutions conforming to standards and users!

Spreader beam for big-bags

Spreader beam for big-bags for safe and protective transport of big-bags.

Attachment of big-bag-loops directly over the hollow section.

SWL max	kg	1000	2000
Weight approx.	kg	24	32
Construction height	H mm	185	210
Working length	L mm	900	900
Working width	M mm	900	900
Suspension eye inner height	V mm	53	63
Suspension eye internal width	W mm	56	67
Suspension eye bar	X mm	18	22
Reference no.		201872	201873

Load clamps

Our load clamps have proven themselves on four continents for over 40 years. They are designed according to European safety standards. This results in:

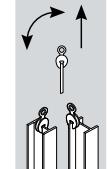

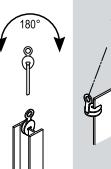

- demonstrably longer service life
- Higher economy:
- greater safety, especially in harsh operating conditions

Every load clamp is manufactured at the head office in Memmingen

Selection aid: Which clamp is the right one for my application?

Question:

Which function should the load clamp fulfil?

Transport of metal sheets, beams, etc. (flexible)										Use as assembly clamp on I-beams (rigid)
Question: In which position should the load be transported?										
vertical (upright)			horizontal (lying down)							rigid
vertical lifting, turning 90°	vertical lifting, turning 180°	lateral attachment, vertical lifting	horizontal transport, dimensionally stable metal sheets	horizontal transport, dimensionally stable metal sheets, sheet stack	horizontal transport, beam, upright	horizontal transport, beam, lateral attachment	horizontal transport, beam lying down, vertical attachment	horizontal transport, beam lying down	beam, turn 90°	more rigid attachment point on ceiling beams

Question:
Should traces of intervention be avoided?

yes: Protective clamp/friction connection

Notice on safe use

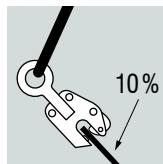

Be sure to read the operating instructions before using a clamp for the first time!

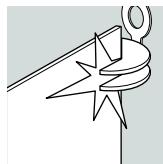

Attend our technical seminars to train your riggers and responsible persons.

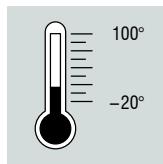

Check the clamp for functionality, damage and wear each time before use. Never use damaged, overloaded or worn clamps. Have clamps inspected by an expert at intervals of no more than one year.

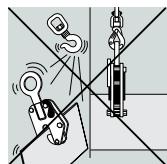

In case of vertical load clamps, the weight of the load must be at least 10% of the specified working load limit of the clamp.

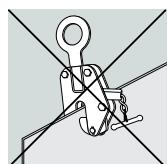

Check the surface hardness of your load.
Standard clamps can be used up to 300 HB. Special hard gripping elements must be used from 300 HB to 450 HB.

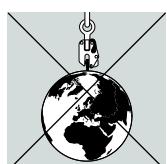

Usable in a temperature range from -20 °C to +100 °C (ambient or load temperature).

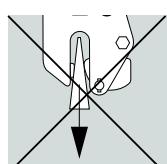

Never use hooks without a safety latch. Use safety hooks.

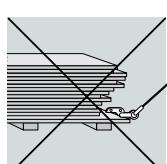

Never lift a load with an open safety latch. Always close the safety latch.

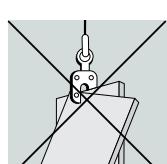

Never overload your clamps.
Always use clamps within the specified carrying capacity.

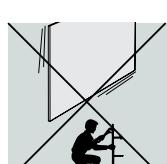

Only attach load clamps to flat-parallel surfaces.

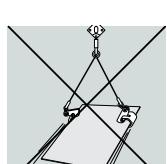

Never pull individual loads from underneath out of a stack.
Never tear off clamped loads.

Never lift more than one plate when lifting vertically!

Never lift loads over people or safety areas!

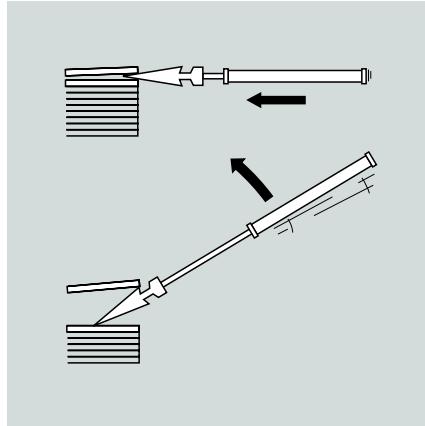

Never use too few clamps so as not to endanger the stability of the load.

Special solutions: We make it possible

We advise you and manufacture tailor-made solutions for you.
Talk to us!

Examples:

Metal sheets stored in stacks can be lifted quickly, simply and safely for attachment with the wedge, ref. no. 121977

Spare parts

There are individual spare parts sets for all load clamp models. This means that worn or defective components can be replaced in a cost-effective way appropriate for the subassembly.

- ▶ Matchless – safe lifting up to an angle of 120° possible
- ▶ Stable and durable – due to the use of the latest materials
- ▶ Adaptable – due to large gripping range
- ▶ Handy – due to slim housing
- ▶ Ergonomic – due to optimised safety lever and low weight
- ▶ Individual – due to additional variants for stainless steel and extra hard sheets (from 300 HB)
- ▶ Lockable in the open and closed states – by hold-open device (open) or by securing against unintentional opening under load (closed)

Clamp Model KL

Flexible, sturdy, versatile – the new KL lifting clamp from Pfeifer sets standards.

With the KL lifting clamp, safe lifting is possible up to an angle of inclination of 120° – both when attaching at the side and lifting vertically, as well as when turning metal sheets, steel plates, beams and steel components by 180°.

Lifting clamps also available for stainless steel and extra-hard sheets.
 For a max. load surface hardness of up to 300 HB (32 HRC).
 Can be used in a temperature range of -20 °C up to +100 °C (surrounding and load temperature).

- ▶ For metal sheets, steel plates, beams, structural steel components
- ▶ Extreme sturdy
- ▶ Large gripping ranges
- ▶ Lock to prevent unintentional opening under load - lockable in closed state
- ▶ Hold-open device - lockable in open state

Clamp Model G 2

Vertical lifting clamp for vertical lifting and 90° turning of sheets, steel plates, girders and structural shapes.
Extremely sturdy and capable for lifts up to 100 tonnes.

For a max. load surface hardness of up to 300 HB (32 HRC).
 Can be used in a temperature range of -20 °C up to +100 °C (surrounding and load temperature).

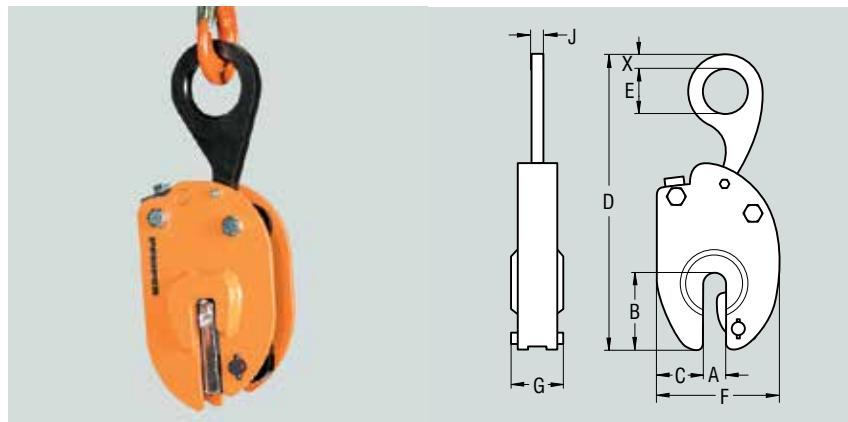

- ▶ For materials with sensitive surfaces
- ▶ Vertical lifting and 90° turning
- ▶ Large gripping ranges

Clamp Model NM

Lifting clamp with large, smooth gripping pads for metals which have sensitive surfaces or which are hard.

Suitable for the vertical lifting and 90° turning.

The jaw can be pre-adjusted to any gripping range using an adjusting screw. After attachment, the adjusting screw must be tightened. The load surfaces must be clean, dry and free of lubrication grease.

Reference no.			121550	121563	121567	121579	121584	121596	121598

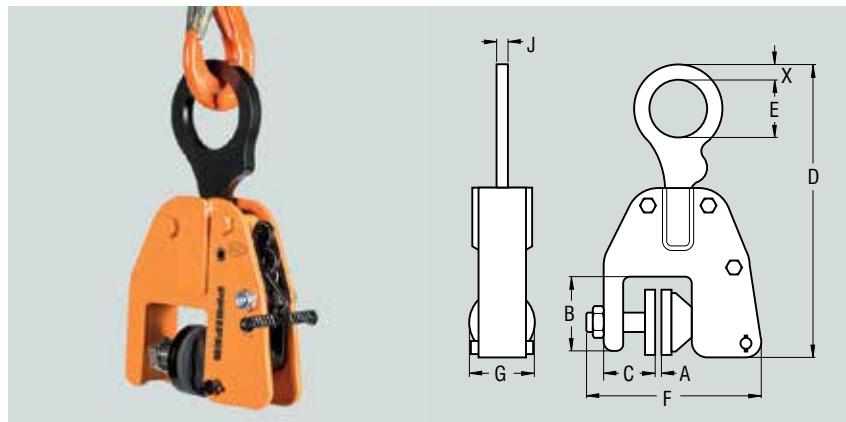

The NM clamps is also available with gripping elements from stainless steel.
Can be used in a temperature range of -20 °C up to +100 °C (surrounding and load temperature).

- ▶ For materials with sensitive surfaces
- ▶ Vertical lifting and 90° turning
- ▶ Large gripping ranges

Clamp Model SP

Suitable for the lifting and 90° turning of materials with sensitive surfaces (stainless steel, plastic and particle boards etc. – not for polished surfaces!).

The specially coated gripping pads can be continuously adjusted with an adjusting screw.

SWL	max	kg	300	300
Gripping range	A _{min}	mm	0	6
Gripping range	A _{max}	mm	30	45
Jaw depth	B	mm	75	75

Suspension eye bar	X	mm	16	16
Weight	ap-prox.	kg	4,7	4,5
Reference no.			121366	121367

Can be used in a temperature range of -20 °C up to +100 °C (surrounding and load temperature).

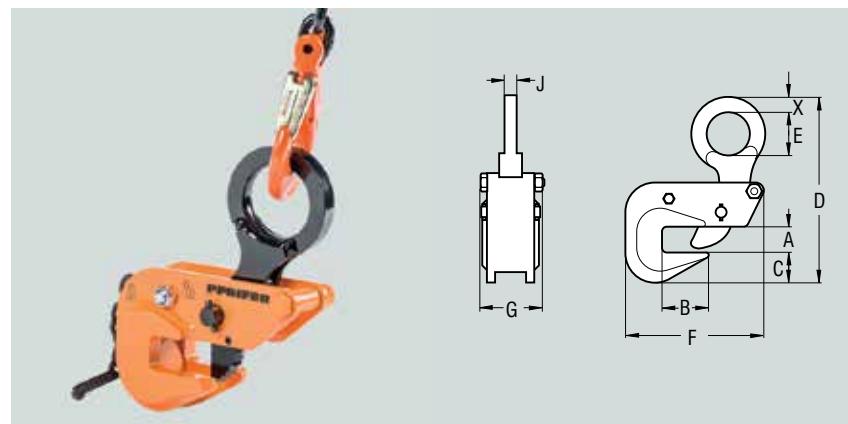

- ▶ For inherently stable and sagging sheets, sheet packets, beams, structural steel components
- ▶ Lock to prevent unintentional opening under load – lockable in closed state
- ▶ Large gripping ranges
- ▶ Highly versatile in use
- ▶ High load capacity and wear resistance

Clamp Model M

Horizontal lifting clamp for both dimensionally stable and thin sagging metal sheets.

Also suitable for lifting sheet stacks and profiles.

The wide, split lower jaw is particularly suitable for gripping steel girders, regardless of whether from the side or the end.

The lifting clamps are fastened to suitable slings (which we also supply on request) and attached at three or more points on the load being handled.

For a max. load surface hardness of up to 300 HB (32 HRC).

Can be used in a temperature range of -20 °C up to +100 °C (surrounding and load temperature).

- ▶ For sheets, bundles of sheets, steel plates
- ▶ Very large gripping range

Options

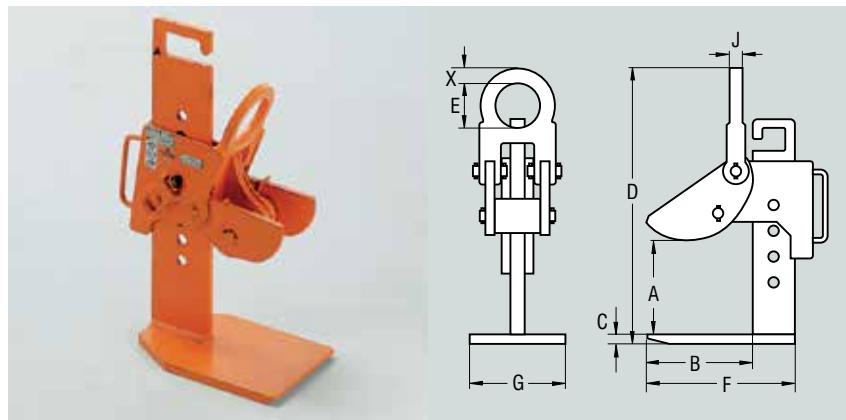

- ▶ Additional options: With suitable slings on request

Clamp Model WHS

High-performance horizontal load clamp for transporting dimensionally stable sheets and sheet stacks.

Their special advantage: With one pin, the gripping range can be changed quickly from 0 to a maximum of 406 mm.

Integral springs hold the gripping cams open and make attachment easier.

The lifting clamps are fastened to suitable slings (which we also supply on request) and attached at three or more points on the load being handled.

For a max. load surface hardness of up to 300 HB (32 HRC).

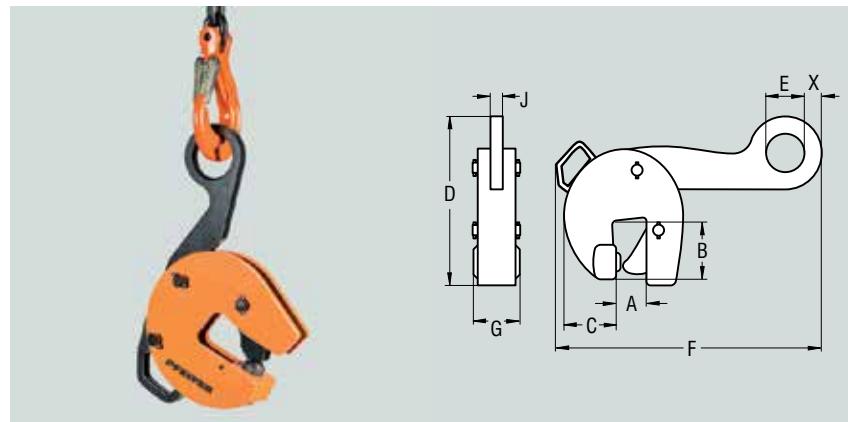

Can be used in a temperature range of -20 °C up to +100 °C (surrounding and load temperature).

- ▶ For turning girders
- ▶ Automatically re-locking safety mechanism.

Clamp Model AST-S

Lifting/turning clamp with serrated gripping cams and safety device, lock-closed feature.

Holds the girder almost horizontally in both directions. It facilitates the turning process when the lifting shackle is arranged outside the girder.

SWL	max	kg	500	1500	3000

For a max. load surface hardness of up to 300 HB (32 HRC).
Can be used in a temperature range of -20 °C up to +100 °C (surrounding and load temperature).

Grippers

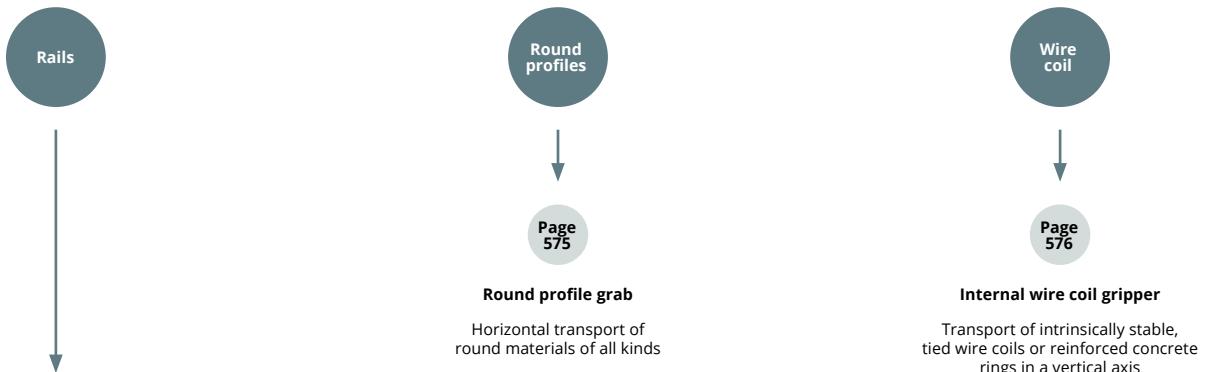

Our grippers enable the safe lifting of a wide variety of rails and round profiles.

Each gripper is manufactured at the headquarters in Memmingen!

Selection aid: Which clamp is the right one for my application?

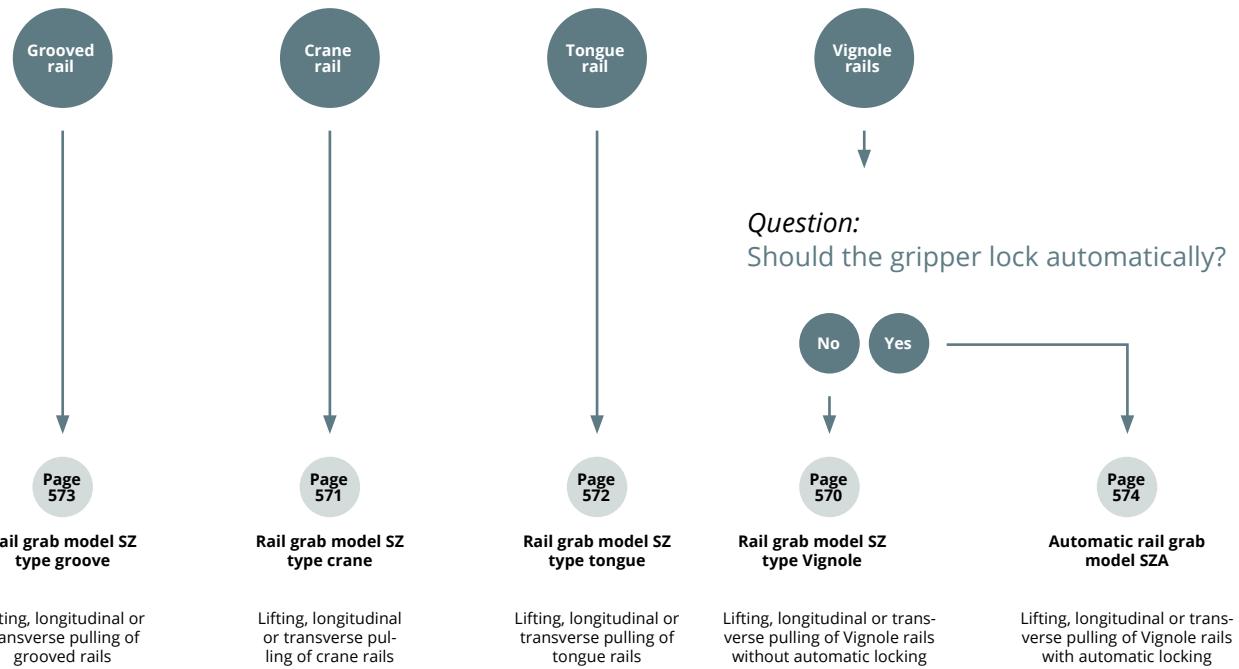

Question:

What kind of load is to be transported?

Question:

What type of rail is to be transported?

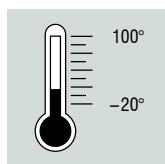

Notice on safe use

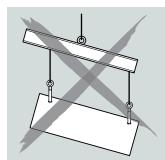

Be sure to read the operating instructions before using a gripper for the first time!

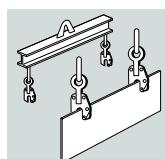

Attend our technical seminars to train your riggers and responsible persons.

Usable in a temperature range from -20 °C to +100 °C (ambient or load temperature).

Always attach the gripper above the centre of gravity of the load.

With longer loads we recommend the use of at least two clamps/grippers in the two-leg suspension gear or on a spreader beam.

Take advantage of our services!

We support you with inspections for the safety and discarding time of your attachment devices.

- ▶ For rails 49E1, 49E5, 60E1, 50E4, 50E6A2
- ▶ Lateral load, parallel shear pull possible
- ▶ Lock to prevent unintentional opening under load – lockable in closed state
- ▶ Hold-open device – lockable in open state

Rail grab Model SZ – Vignole rail

For lifting and pulling rails lengthways and crossways.

Safety device with double function: For holding open and locking under load in order to hold rails securely, even when they are overturning, i. e. the grab cannot open accidentally.

SWL max	kg	2000	4000
For rail size		49E1, 49E5, 60E1, 50E4, 50E6A2	49E1, 49E5, 60E1, 50E4, 50E6A2
Gripping range	A _{min} mm	13	65
Gripping range	A _{max} mm	94	75
Jaw depth	C mm	52	80
Suspension eye inner diameter	E mm	60	76
Overall length open	F mm	187	350
Overall width	G mm	107	150
Construction height Open	H _{min} mm	236	320
Construction height closed	H _{max} mm	310	410
Suspension eye thickness	J mm	20	25
Suspension eye bar	X mm	21	31
Weight approx.	kg	7,2	22
Reference no.		322512	114062

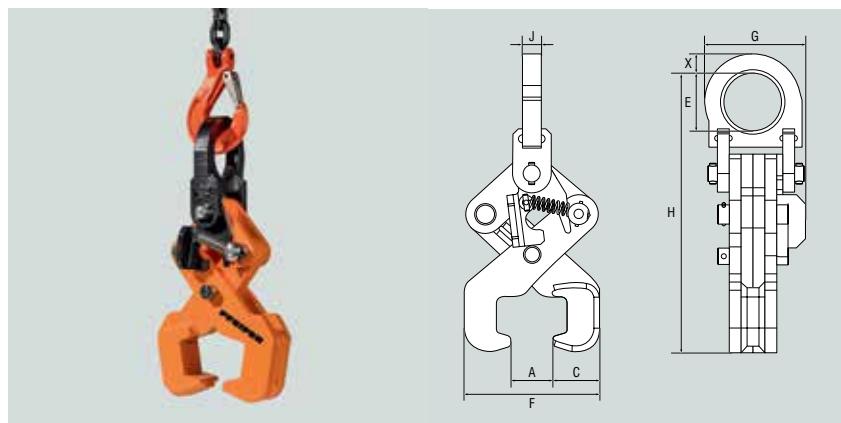

Can be used in a temperature range of -20 °C up to +100 °C (surrounding and load temperature).

- ▶ For rails A45, A55, A65, A75, A100, A120, A150
- ▶ Lateral load, parallel shear pull possible
- ▶ Lock to prevent unintentional opening under load – lockable in closed state
- ▶ Hold-open device – lockable in open state

Rail grab Model SZ – Crane rail

For lifting and pulling rails lengthways and crossways.

Safety device with double function: For holding open and locking under load in order to hold rails securely, even when they are overturning, i. e. the grab cannot open accidentally.

SWL max		kg	2000	2000	2000	2000	2000

Construction height closed	H _{max}	mm	335
Suspension eye thickness	J	mm	20
Suspension eye bar	X	mm	21
Weight approx.		kg	8,1
Reference no.			393040

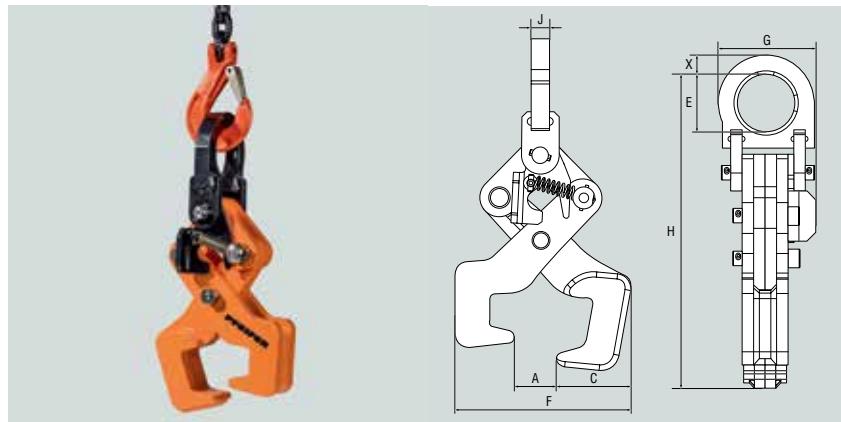

Can be used in a temperature range of -20 °C up to +100 °C (surrounding and load temperature).

- ▶ For rails 60R1, 59R1, 54G2, 60R3, 75C1
- ▶ Lateral load, parallel shear pull possible
- ▶ Lock to prevent unintentional opening under load – lockable in closed state
- ▶ Hold-open device – lockable in open state

Rail grab Model SZ – Grooved rail

For lifting and pulling rails lengthways and crossways.

Safety device with double function: For holding open and locking under load in order to hold rails securely, even when they are overturning, i. e. the grab cannot open accidentally.

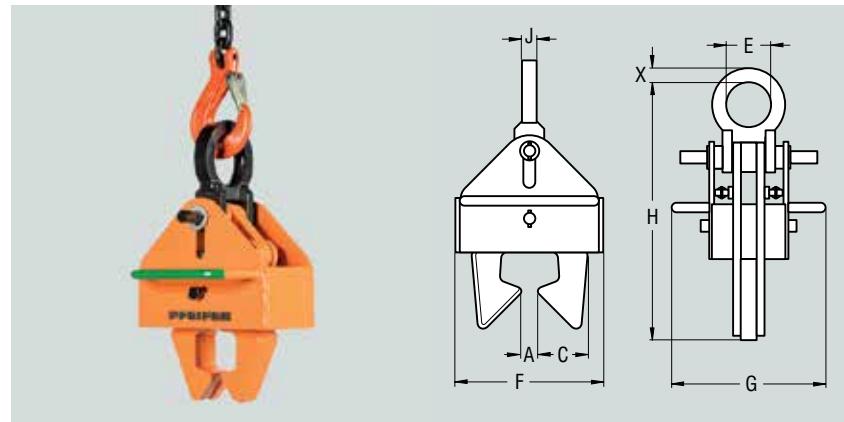

SWL max	kg	2000
For rail size		60R1, 59R1, 54G2, 60R3, 75C1
Gripping range	A _{min} mm	27
Gripping range	A _{max} mm	133
Jaw depth	C mm	67
Suspension eye inner diameter	E mm	60
Overall length open	F mm	255
Overall width	G mm	107
Construction height Open	H _{min} mm	272
Construction height closed	H _{max} mm	353
Suspension eye thickness	J mm	20
Suspension eye bar	X mm	21
Weight approx.	kg	8,8
Reference no.		393009

Can be used in a temperature range of -20 °C up to +100 °C (surrounding and load temperature).

- ▶ For rails 49E1, 49E5, 60E1, 50E4, 50E6A2
- ▶ Automatic lock
- ▶ Lateral load, parallel shear pull possible
- ▶ Complies with TBG requirements

Automatic rail grab Model SZA – Vignol rail

For lifting and pulling rails lengthways and crossways.
After placing the grab on the load, it locks automatically
(in compliance with TBG requirements).

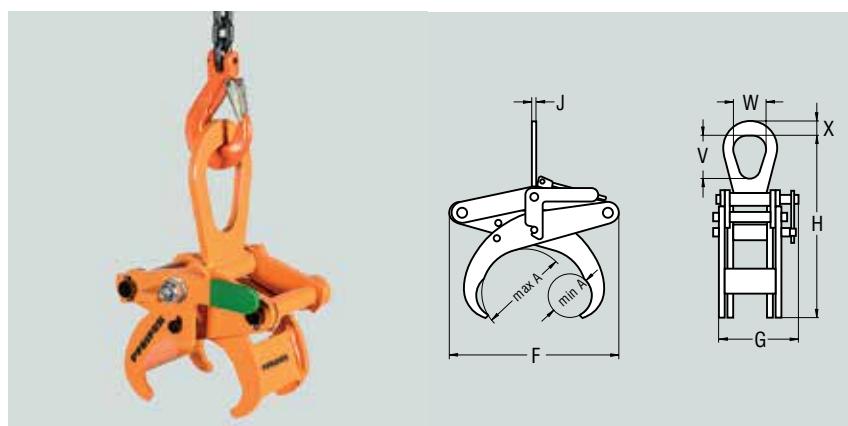

SWL max	kg		2000	4000
For rail size			49E1, 49E5, 60E1, 50E4, 50E6A2	49E1, 49E5, 60E1, 50E4, 50E6A2
Gripping range	A _{min}	mm	65	65
Gripping range	A _{max}	mm	75	75
Jaw depth	C	mm	85	90
Suspension eye inner diameter	E	mm	60	65
Overall length open	F	mm	200	200
Overall width	G	mm	210	230
Construction height Open	H _{min}	mm	270	285
Construction height closed	H _{max}	mm	350	365
Suspension eye thickness	J	mm	20	25
Suspension eye bar	X	mm	20	23
Weight approx.	kg		12	17
Reference no.	178196		185063	

Can be used in a temperature range of -20 °C up to +100 °C (surrounding and load temperature).

- ▶ For round materials of all kinds
- ▶ 4-point clamping
- ▶ Lock to prevent unintentional opening under load – lockable in closed state
- ▶ Hold-open device – lockable in open state

Rod and bar grab

For horizontal transport of round materials of all kinds.
Heavy-duty double-scissor design with safety latch.
Very small external footprint thanks to a new internal contour whose 4-point clamping prevents the load from seesawing.
Self-acting latched hold-open lever, locking spring stirrup with handle for securing the grab against opening accidentally when the load on the grab is released.
For design-related reasons, grabs with part no. 114040 and 114049 are supplied without safety device.

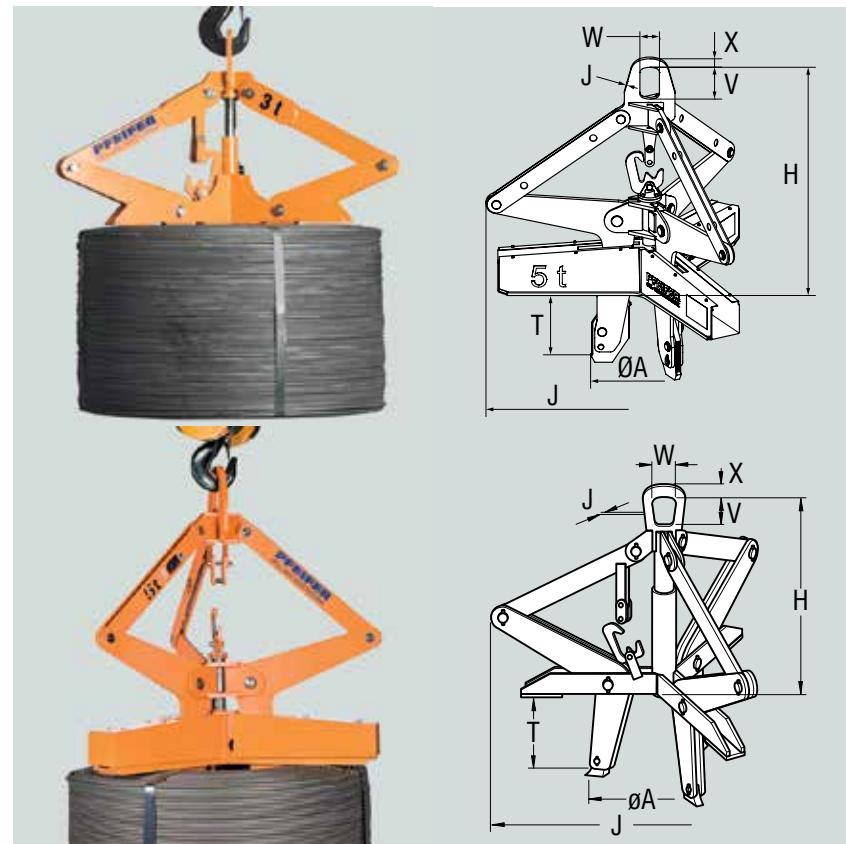

SWL max	kg	500	500	500	1000	1000	2000	2000
Gripping range	A _{min}	mm	50	100	200	100	200	150

Suspension eye internal width	W	mm	77	77	80	77	80	80
Suspension eye bar	X	mm	31	31	40	31	40	40
Weight approx.	kg	8,23	17,5	39	21,22	48	56	115
Reference no.		114040	114041	114043	114045	114046	114048	114049

Can be used in a temperature range of -20 °C up to +100 °C (surrounding and load temperature).

- ▶ Ideal for the coil weights and internal coil diameters available on the market
- ▶ Closes under load with automatic stepping mechanism
- ▶ Sturdy lever construction with interchangeable gripping jaws made of highly wear-resistant special structural steel
- ▶ 5t execution: Increase of the gripping range possible by simple re-pinning from 650 to 950 mm

Wire coil grab

Wire coil grab for safe and protective transport of inherent, bundled wire coils and concrete steel rings in vertical axis.

SWL max		kg	3000	5000
Gripping range	A _{min}	mm	550	500
Gripping range	A _{max}	mm	700	950
Construction height Open	H _{min}	mm	640	1000
Construction height closed	H _{max}	mm	960	1450
Immersion depth	T	mm	230	310
Suspension eye thickness	J	mm	20	20
Suspension eye inner height	V	mm	105	150
Suspension eye internal width	W	mm	82	85
Suspension eye bar	X	mm	35	40
Weight approx.		kg	110	320
Reference no.			252265	278608

Not permissible for smooth reinforcing wire B500A-G!
An appropriate cross bar is available for transport by fork-lift truck.

Drum handling equipment

Our drum handling equipment enable the simple and safe lifting of a wide variety of drums and are suitable for all common applications:

- Transport by crane hook or fork-lift truck
- Load holder for upright or lying barrels
- for steel or plastic drums

Every device is manufactured at the headquarters in Memmingen

Selection aid: Which device is the right one for my application?

- ▶ Large gripping ranges
- ▶ Low dead weight

Options

- ▶ **Additional options:** with hold-open device or stepping mechanism

Drum grab for lying drums

For horizontal, inherently stable metal drums with rim.
 Perfect for picking up horizontally positioned 200-l steel drums with tight heads and steel drums with lids

SWL max	kg	500
Load length	A _{min} mm	650
Load length	A _{max} mm	950
Gripping depth	C mm	20
Overall length	F mm	1055
Overall width	G mm	190
Construction height	H _{min} mm	615
Suspension eye thickness	J mm	10
Suspension eye inner height	V mm	60
Suspension eye internal width	W mm	60
Suspension eye bar	X mm	15
Weight approx.	kg	8,5
Reference no.		114173

- ▶ Large gripping ranges
- ▶ Low dead weight

Options

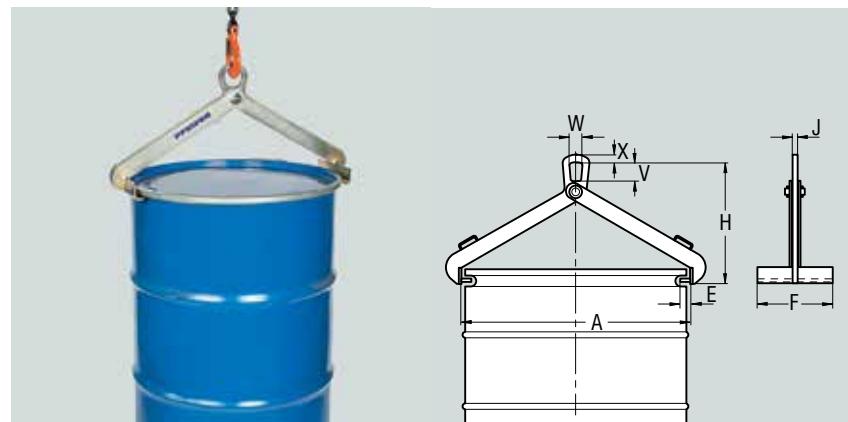

- ▶ Additional options: with hold-open device or stepping mechanism

Drum grab for standing drums

For upright, inherently stable metal and L-ring plastic drums with lid and rim.

Also suitable for use with tightly stacked drums.

Perfect for picking up upright 200-l steel drums with tight heads and steel drums with lids.

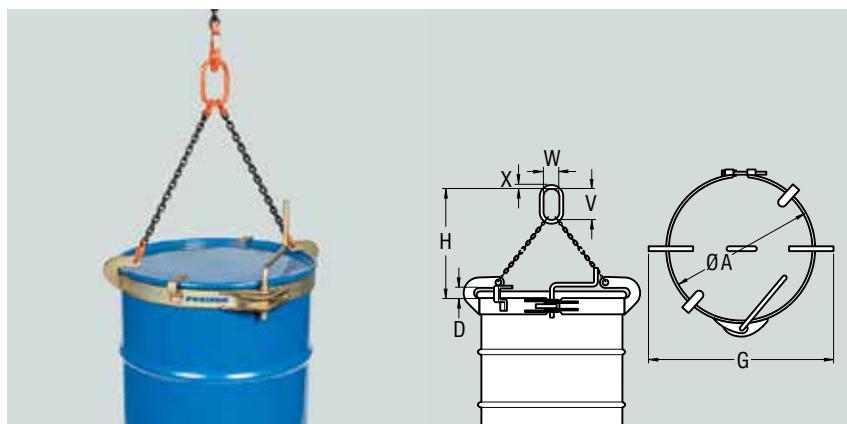

SWL max		kg	500
Load diameter	A _{min}	mm	390
Load outer diameter max	A _{max}	mm	650
Gripping depth	C	mm	35
Overall length	F	mm	750
Overall width	G	mm	200
Construction height	H _{min}	mm	420
Suspension eye thickness	J	mm	10
Suspension eye inner height	V	mm	50
Suspension eye internal width	W	mm	50
Suspension eye bar	X	mm	15
Weight approx.		kg	5
Reference no.			114172

- ▶ Infinitely adjustable gripping range
- ▶ Locking device

Drum lifting clamp

Clamp undergripping at the lower drum edge for lifting upright, inherent metal drums with rim (with or without lid). The steel collar is fitted around the drum by a pivot lever. The gripping diameter can be altered by an adjusting screw.

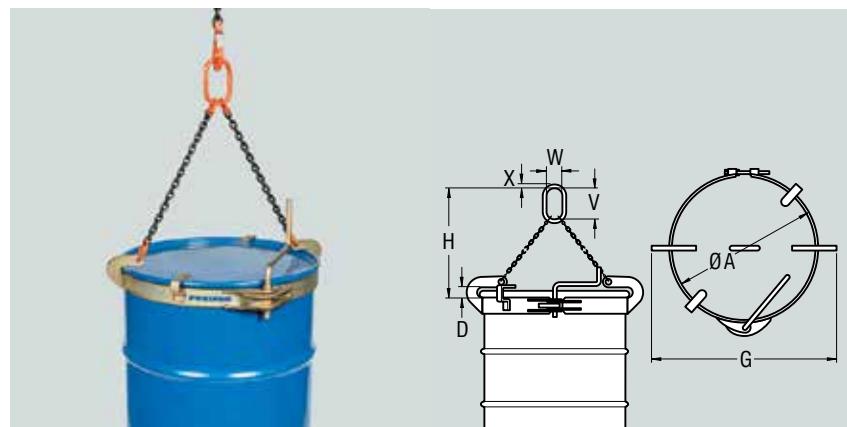

SWL max	kg	800
Load diameter	A_{\min} mm	390
Load outer diameter max	A_{\max} mm	415
Inner height	D mm	25
Overall width	G mm	520
Construction height	H_{\min} mm	650
Suspension eye inner height	V mm	100
Suspension eye internal width	W mm	90
Suspension eye bar	X mm	21
Weight approx.	kg	9
Reference no.		121921

- ▶ Infinitely adjustable gripping range
- ▶ Locking device

Drum lifting clamp for large diameter

Clamp undergripping at the lower drum edge for lifting upright, inherent metal drums with rim (with or without lid). The steel collar is fitted around the drum by a pivot lever. The gripping diameter can be altered by an adjusting screw.

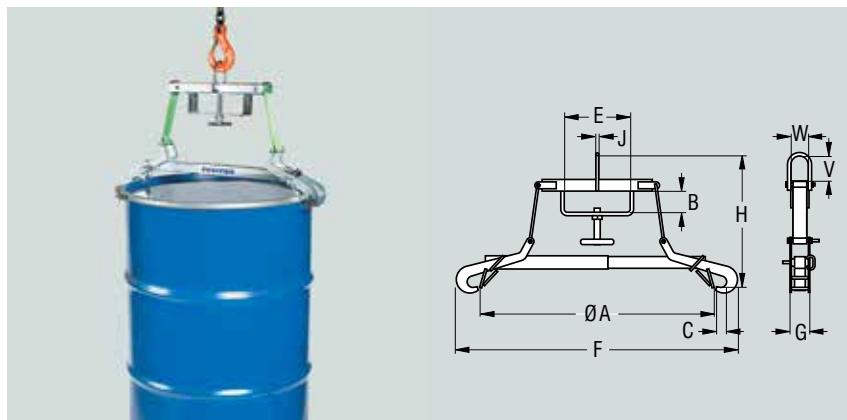

SWL max		kg	800
Load diameter	A_{\min}	mm	560
Load outer diameter max	A_{\max}	mm	610
Inner height	D	mm	25
Overall width	G	mm	520
Construction height	H_{\min}	mm	650
Suspension eye inner height	V	mm	100
Suspension eye internal width	W	mm	90
Suspension eye bar	X	mm	21
Weight approx.		kg	9
Reference no.	121923		

- Adjustable gripping range
- Can be picked up by fork-lift truck

Drum gripper

For transport of vertical inherently stable steel drums (with lid) and L-ring plastic drums.

Perfect for picking up upright 200-l steel drums with tight heads and steel drums with lids.

SWL max	kg		250
Load diameter	A _{min}	mm	420
Load outer diameter max	A _{max}	mm	640
Prong gap inner height	B	mm	60
Prong gap internal width	E	mm	185
Overall length	F	mm	520
Overall width	G	mm	56
Construction height	H _{min}	mm	410
Suspension eye thickness	J	mm	8
Suspension eye inner height	V	mm	65
Suspension eye internal width	W	mm	50
Weight approx.	kg		4,4
Reference no.			173981

- ▶ Locking device
- ▶ 4-point clamping system
- ▶ Simple one-hand operation

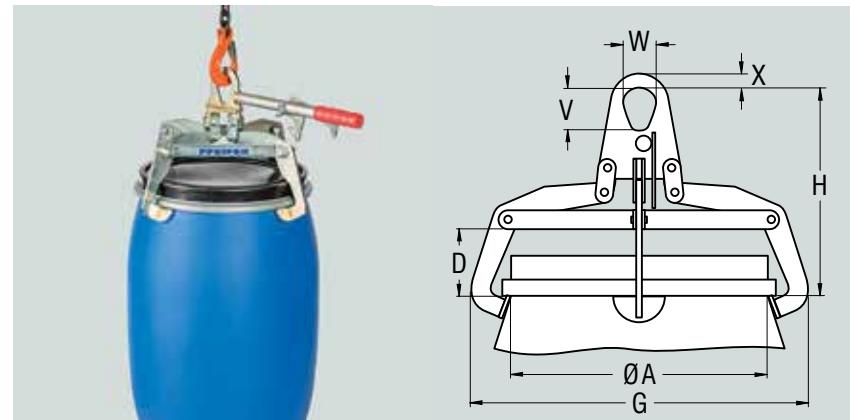

Clamp claw gripper for plastic drums

Mechanically working four-arm grab for lifting upright, inherently stable drums.

For transporting vertical standard plastic drums 120 l with high or low lids.

Simple one-hand operation by horizontal guiding tube and self-locking safety catch.

Unlocking by releasing the safety catch at the horizontal guiding tube.

SWL max		kg	360
Load diameter	A _{min}	mm	390
Load outer diameter max	A _{max}	mm	450
Inner height	D	mm	110
Overall width	G	mm	535
Construction height	H _{min}	mm	280
Suspension eye inner height	V	mm	70
Suspension eye internal width	W	mm	50
Suspension eye bar	X	mm	20
Weight approx.		kg	8
Reference no.	179947		

- ▶ Locking device
- ▶ 4-point clamping system
- ▶ Simple one-hand operation

Options

- ▶ Additional options: Version for plastic drums

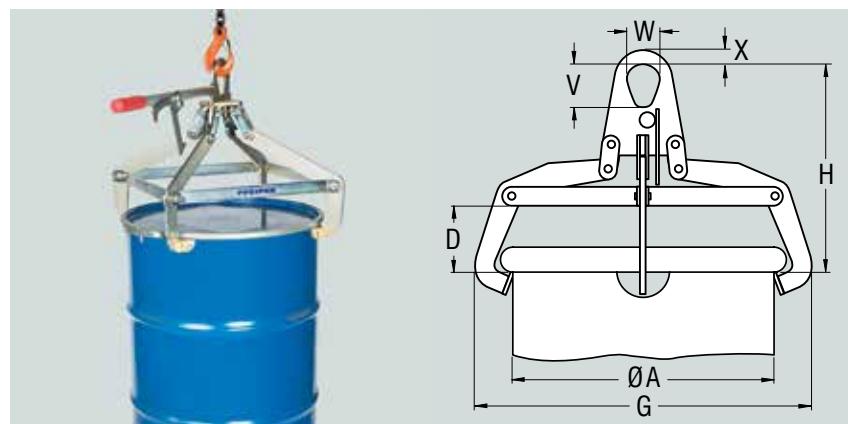

Clamp claw gripper for steel drums

Mechanically working four-arm grab for lifting upright, inherently stable drums.

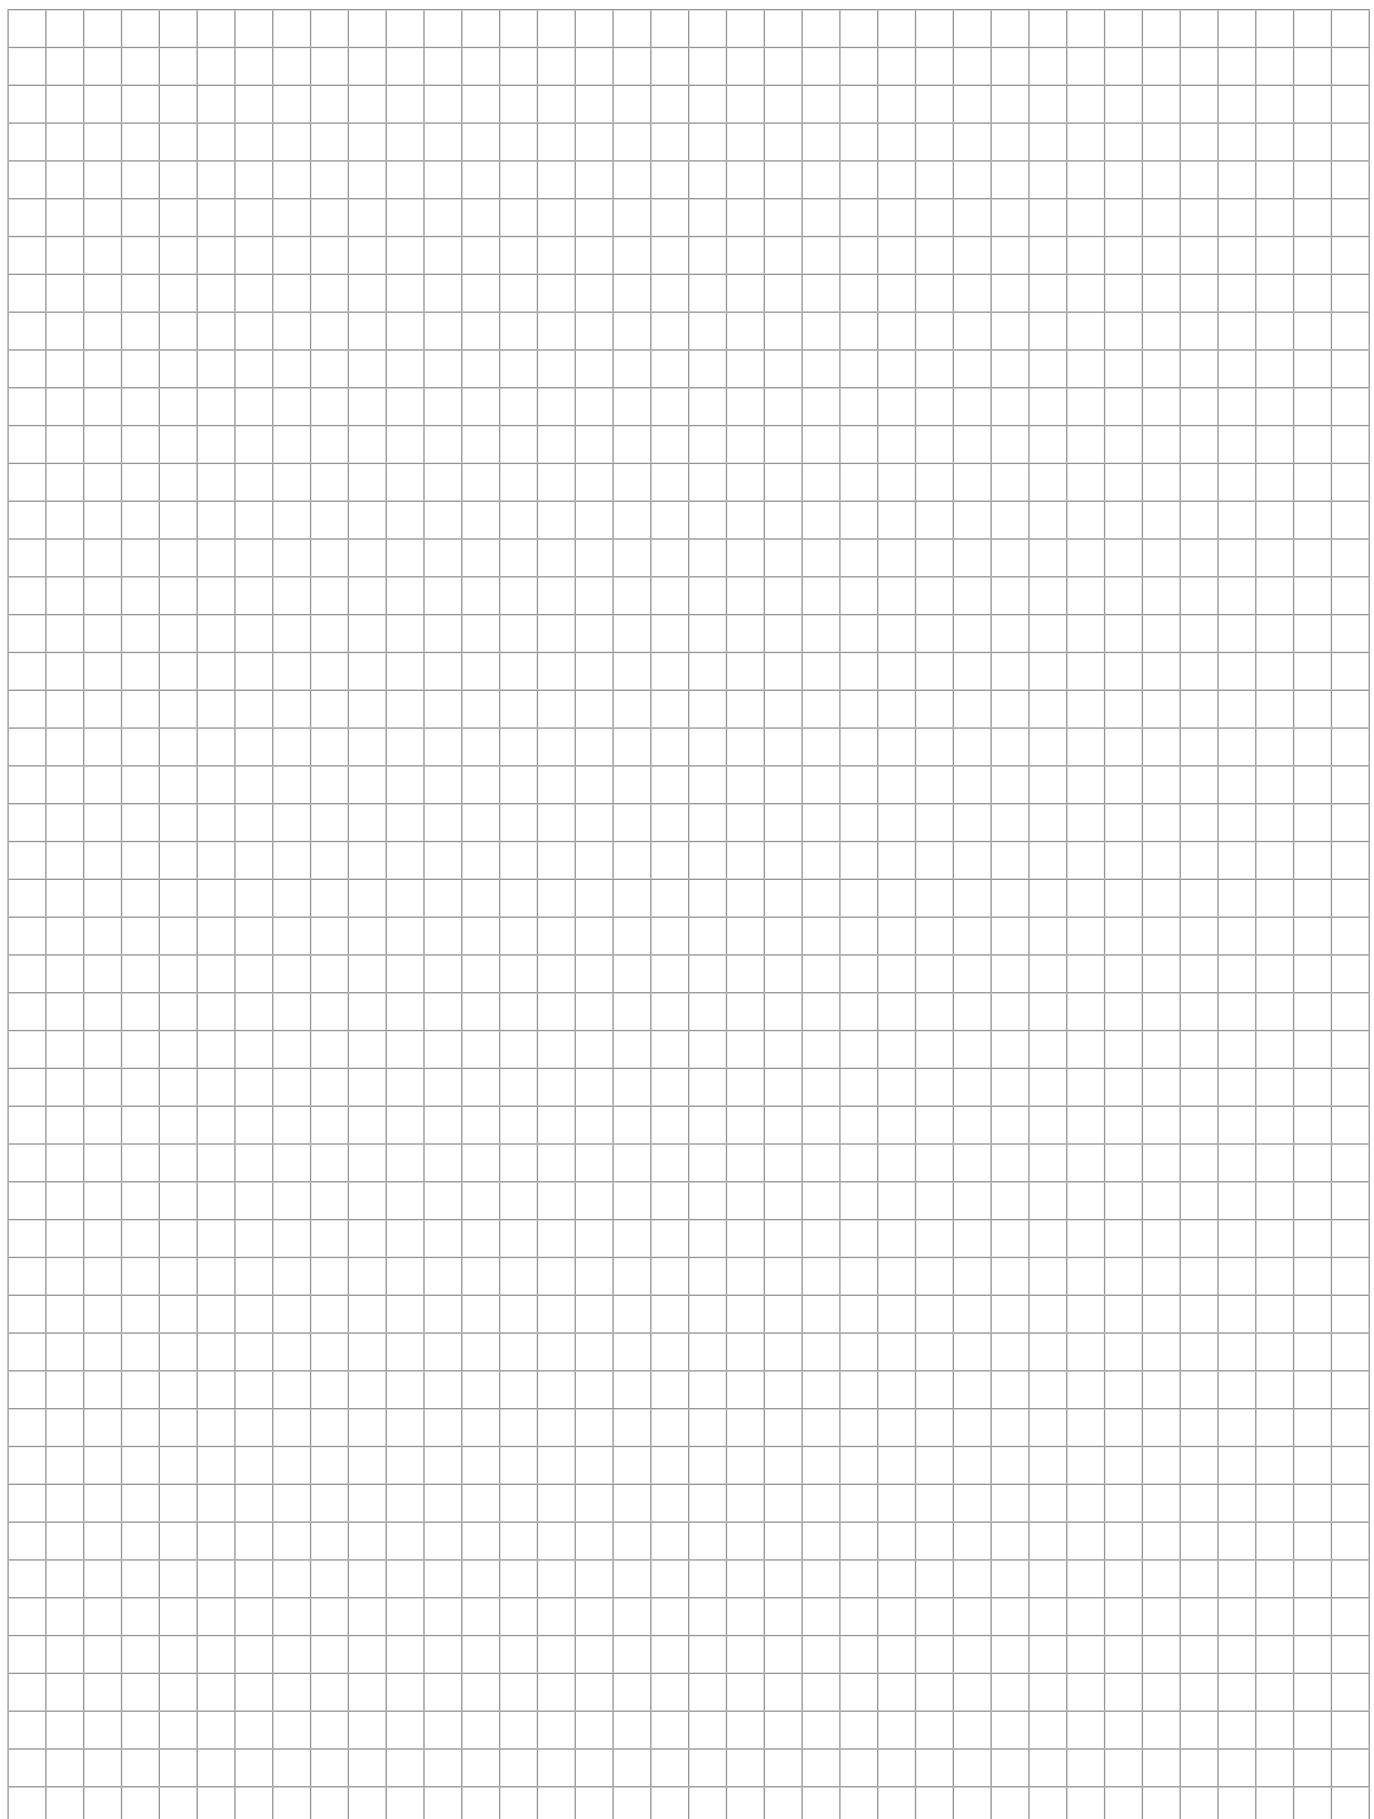

For vertical standard metal drums 200 l with lid.

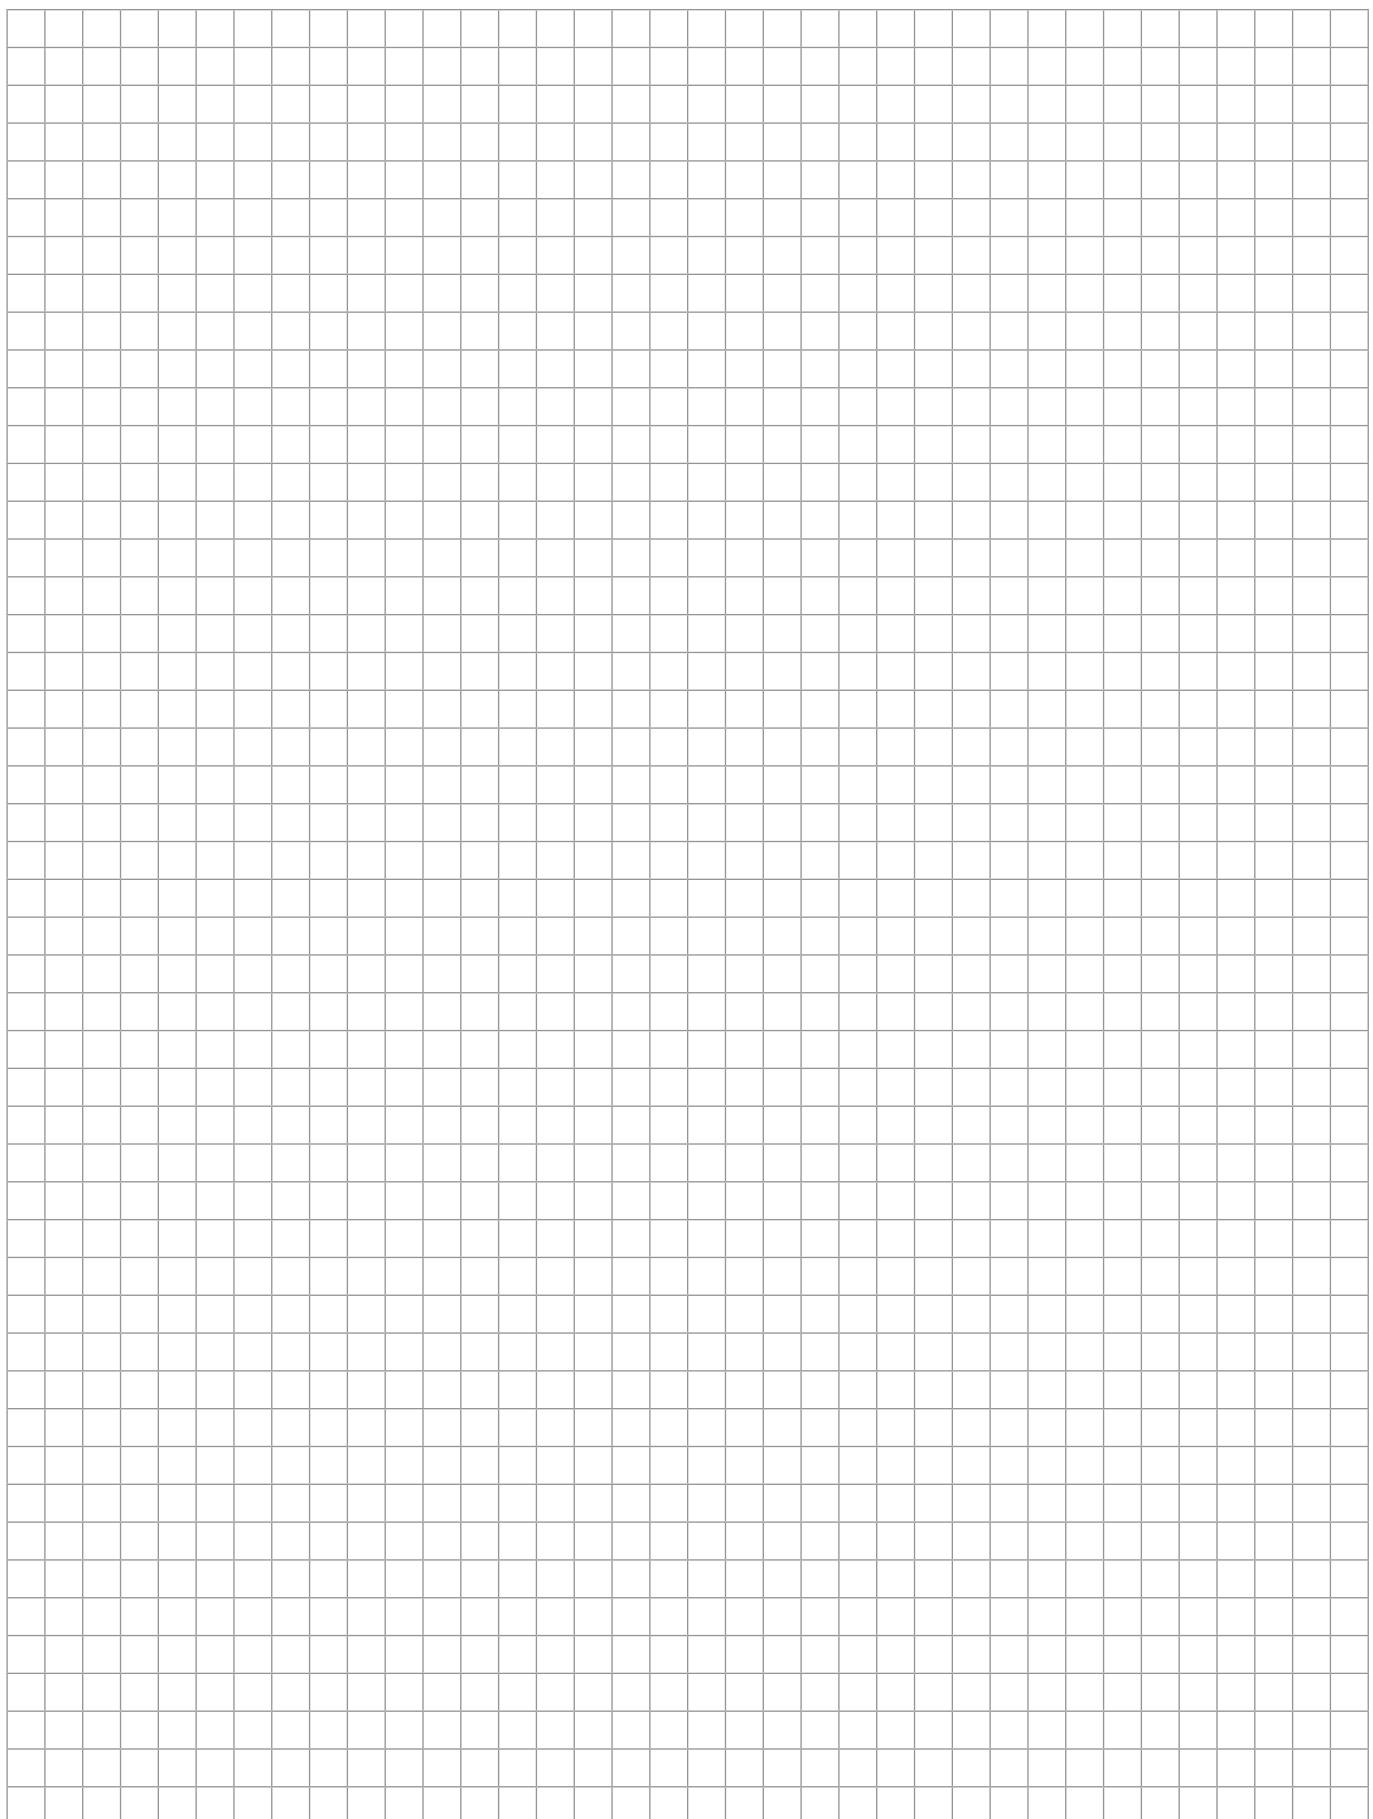

Simple one-hand operation by horizontal guiding tube and self-locking safety catch.

Unlocking by releasing the safety catch at the horizontal guiding tube.

SWL max		kg		800
Load diameter	A _{min}	mm		570
Load outer diameter max	A _{max}	mm		630
Inner height	D	mm		102
Overall width	G	mm		735
Construction height	H _{min}	mm		450
Suspension eye inner height	V	mm		85

**Made for all those
who want to reach high.**

Safety in the workplace is paramount. Especially if the workplace can also lie at a height of 15 m. That's why we have the right professional protective equipment against falls from a height. Carefully selected and tested for everyday use and emergencies.

Fall protection equipment

Fall protection equipment

Maximum safety with fall protection equipment from PFEIFER! According to the statistics, falls are among the most frequent causes of death at the workplace. It is thus all the more important to adequately protect oneself and ones employees using suitable personal fall protection equipment and also to check this equipment regularly. PFEIFER supports you with an extensive range so that you are also on the safe side when working in high workplaces.

Assortment

All information about our product range of fall-protection equipment can be found at: www.pfeifer.info/psa

Safety harnesses, safety belts and accessories

Connecting devices

Lowering devices, climbing devices and rescue devices

Attachment points and attachment aids

Sets for fall protection and rescue

Storage options and other accessories

Snap hook

 Turnover table **540 ff.**
 Turnover tables **540 ff.**

U

Universal connecting links in quality grade 10 HIT **213 ff.**
 Universal connecting links in quality grade 12 HIT PRO **119**
 Universal connecting links in quality grade 8 **240**

V

Vertical drum gripper **583**

W

Weighing devices **456 ff.**
 Weld-on hook **68**
 Winches and rope hoists **443 ff.**
 Winches and rope pulleys **443 ff.**
 Wire Coil Grabs **576 ff.**
 Wire rope sling **330 ff.**
 Wire rope slings **330 ff.**
 Wire rope slings – endless **342 ff.**
 Wire rope slings, 2-leg **337**
 Wire rope slings, 4-leg **339**
 Wire rope slings, single leg **330 ff.**
 Wire rope traction hoists **443 ff.**

T

Tension dynamometers and tensile force measuring shackles **456 ff.**

General remarks

Ordering information

To ensure a smooth and error-free order and invoice process, please provide the complete reference number when ordering.

Service hours

Monday - Thursday

07:30-17:00

Friday

07:30-15:00

Prices

All prices are ex-works, plus the legal value added tax.

Prices subject to change

For articles in stainless steel, we reserve the right to increase prices for any alloy surcharges. We also reserve the right to charge a raw material surcharge for all articles.

Minimum order value

The minimum order value for small orders is € 200.00 net. If the minimum order value is not reached, we reserve the right to charge a processing fee.

Shipping type

Packages up to a weight of 30 kg and a maximum length of 1.50 m are sent by parcel service. Shipments over 30 kg or over a max. length of 1.50 m are sent by a freight company. The delivery time is usually between 48 and 72 hours.

Freight

Unless agreed otherwise, the freight costs will be invoiced according to expenditure.

Returns

Returns are only possible with our prior agreement.

In principle, a handling fee of 25% of the net value of the goods will be deducted, but at least € 50.00. The goods must be returned at the customer's expense. Custom-made products cannot be returned. To speed up processing, please enclose a copy of the delivery note or request a return note from us.
